the web **Graphic Design in Urban Environments** Robert Harland, 2016-10-20 Graphic Design in Urban Environments introduces the idea of a category of designed graphic objects that significantly contribute to the functioning of urban systems. These elements, smaller than buildings, are generally understood by urban designers to comprise such phenomena as sculpture, clock towers, banners, signs, large screens, the portrayal of images on buildings through smart screens, and other examples of what urban designers call urban objects. The graphic object, as it is defined here, also refers to a range of familiar things invariably named in the literature as maps, street numbers, route signs, bus placards, signs, architectural communication, commercial vernacular outdoor publicity, lettering, banners, screens, traffic and direction signs, and street furniture. One can also add markings of a sports pitch, lighting, bollards, even red carpets or well dressings. By looking at the environment and design and deconstructing form and context relationships, the defining properties and configurational patterns that make up graphic objects are shown in this book to link the smallest graphic detail (e.g. the number 16) to larger symbolic statements (e.g. the Empire State Building). From a professional design practice perspective, a cross section through type, typographic, graphic, and urban design will provide a framework for considering the design transition between alphabets, writing systems, images in the broadest sense, and environments. *Artificial Intelligence in Vocational Education and Training* Selena Chan, 2025-05-30 This book details a series of studies across several levels of learning and vocational education and training (VET) discipline areas. In the main, the advent of natural language AI chatbots, exemplified by ChatGPT, has caused the educational sector to take on a defensive stance. Both schools and the higher education sector are engaged in an on-going arms race to prevent learners from using AI to augment assessments. Therefore, there has been a focus on plagiarism prevention rather than to better understand the potentialities for utilizing AI to support better learning. This book explores the collaborative development and planning between educational developers, learning designers, and teachers to design learning activities which could leverage off various artificial intelligence (AI) platforms. In doing so, support is provided for effective learning to be undertaken with an emphasis on the learning and application of critical thinking skills. The studies presented through the volume describe the integration of AI literacy to support learners in evaluating the relevance and efficacy of AI tools and platforms and to understand how to best utilize these for specific purposes. This book also synthesizes a framework for the introduction, selection, and implementation of AI into the VET curriculum. It showcases recommendations and guidelines to inform the future integration of AI tools, platforms into the VET curriculum. *Production for Graphic Designers* Alan Pipes, 2005 Computer technology has completely revolutionized the work of graphic designers, printers, and print production professionals.
