## **Grazing Research At Northern Latitudes:**

*Grazing Research at Northern Latitudes* Olafur Gudmundsson, 1986-08-31 This volume contains the papers recommendations and conclusions of the Workshop on Grazing Research at Northern Latitudes held at Hvanneyri in Iceland 5 10 August 1985 As the name indicates the Workshop was dedicated to the study of plant animal interactions in ecosystems that have evolved under boreal conditions and are therefore typically fragile The sensitivity of vast areas of northern grazing lands to the impact of grazing animals has in many areas led to irreversible plant and soil losses However northern areas of the world offer tremendous potential for production of red meat One of the means of efficiently utilizing these vast rangelands is by grazing animals that are able to forage over extensive areas This is an efficient way to convert primary production into much needed protein to help satisfy increasing requirements throughout the world Because of increased development of the resources of the northern regions as well as the population increase in general an increase in food production in these areas is necessary Strengthening of agriculture in the north further helps to improve the standard of living Since the traditional mid latitude farming methods are not well suited to the northern conditions it is important to develop and learn new production techniques that fit the short summers and long winters A logical first step is to utilize the enormous grazing value of the northern areas

*Rangeland Desertification* Olafur Arnalds, Steve Archer, 2013-03-09 Desertification has occurred worldwide The biophysical and socio economic complexity of this phenomenon has challenged our ability to categorize inventory monitor and repair the condition of degraded lands One of the most important distinctions to be made in relation to land degradation is between cultivated land used for annual crop production and rangelands Grazing by free roaming livestock is the traditional primary use of the world s rangelands However there is growing recognition of the importance of these vast acreages for wildlife habitat hydrology and ground water recharge recreation and aesthetics This text focuses on the desertification of rangelands and explores processes problems and solutions Chapters in the first section evaluate

interactions between natural and human induced disturbance regimes thresholds and non linear change with respect to vegetation hydrology nutrients and erosion Chapters in the second section examine socio economic constraints and approaches for preventing and reversing degradation The book provides a contemporary process oriented perspective on rangeland degradation of value to students policy makers and professionals alike *The Cultural Landscape* Hilary H. Birks,1988 The Cultural Landscape Past Present and Future considers different aspects of man s intervention with natural vegetation and the landscape resulting from a long equilibrium of co existence These landscapes are not stable and the recent and ever accelerating changes in technology and life style have increasingly affected many ancient landscapes as old land use practices are abandoned and traditions forgotten The papers in this book describe and trace the development of cultural landscapes in different climatic and biogeographical regions in Europe Remnants of traditional land use still remaining are described particularly from Western Norway where traditions have lingered because the rugged topography of the region is inimicable to high technology Each chapter is by an expert in the field The topics cover the documentation of present cultural landscapes their maintenance and restoration and the history of the development of cultural landscapes from the Stone Age onwards linking the intensity of landscape utilization with population dynamics and technological attainments The disciplines involved include vegetation science vegetation history ecology palaeoecology archaeology sociology geography and history *Bibliographies and Literature of Agriculture* ,1990 Agricultural Ecology Joy Tivy,2014-10-13 This book analyses the nature of the relationships between crops livestock and the bio physical environment and the extent to which man has managed and modified the products and environment to suit his her own particular needs **Behavioural Mechanisms of Food Selection** Roger N. Hughes,2013-06-29 Behavioural Mechanisms of Food Selection examines animals belonging to diverse trophic groups from carnivores herbivores micro algal grazers to filter feeders and detritus feeders In the past Optimal Foraging Theory has been applied to all these groups but in different ways and in disciplines that rarely overlap Here concepts and developments hitherto scattered in the literature are drawn together This uniquely broad synthesis captures the state of the art in the study of diet selection and prescribes new objectives in theoretical development and research **Ecology and Behaviour of the African Buffalo** H.H.T Prins,2012-12-06 Over the past 30 years or so research effort in behaviour and ecology has progressed from simple documentation of the habits or habitats of different species to asking more searching questions about the adaptiveness of the patterns of behaviour observed moved from documenting simply what occurs to trying to understand why Increasingly studies of behaviour or ecology explore the function of particular responses or patterns of behaviour in individuals or populations looking for the adaptiveness that has led to the adoption of such patterns either at a proximate level what environmental circumstances have favoured the adoption of some particular strategy or response from within the animal s repertoire at that specific time or at an evolutionary level speculating upon what pressures have led to the inclusion of a particular pattern of behaviour within the

repertoire in the first place Many common principles have been established common to a wide diversity of animal groups yet showing some precise relationship between a given aspect of behaviour or population dynamics and some particular ecological factor In particular tremendous advances have been made in understanding the foraging behaviour of animals and the decision rules by which they seek and select from the various resources on offer and patterns of social organization and behaviour the adaptiveness of different social structures group sizes or reproductive tactics Quick Bibliography Series

The arctic region is predicted to experience the earliest and most pronounced global warming response to human induced climatic change This book synthesizes information on the physiological ecology of arctic plants discusses how physiological processes influence ecosystem processes and explores how climate warming will affect arctic plants plant communities and ecosystem processes Reviews the physiological ecology of arctic plants Explores biotic controls over community and ecosystems processes Provides physiological bases for predicting how the Arctic will respond to global climate change

Kreger,1992 **General Technical Report RMRS** ,1998 **Plant Defense** Dale Walters,2011-06-09 Plant Defense provides an overview of all major aspects of plant defence including defence against pathogens parasites and invertebrate and vertebrate herbivores The book looks at defense mechanisms including structural and chemical defences and constitutive and inducible defences Including details of how plants sense attack and how this is communicated within the plant and also to neighbouring plants how plants coordinate defence responses to simultaneous multiple attacks and the energy and resources expended by a plant in maintaining and implementing its defence systems

*Ecosystems of Disturbed Ground* L.R. Walker,1999-12-17 As the human population inexorably grows its cumulative impact on the Earth's resources is hard to ignore The ability of the Earth to support more humans is dependent on the ability of humans to manage natural resources wisely Because disturbance alters resource levels effective management requires understanding of the ecology of disturbance This book is the first to take a global approach to the description of both natural and anthropogenic disturbance regimes that physically impact the ground Natural disturbances such as erosion volcanoes wind herbivory flooding and drought plus anthropogenic disturbances such as forestry grazing mining urbanization and military actions are considered Both disturbance impacts and the biotic recovery are addressed as well as the interactions of different types of disturbance Other chapters cover processes that are important to the understanding of disturbance of all types including soil processes nutrient cycles primary productivity succession animal behaviour and competition Humans react to disturbances by avoiding exacerbating or restoring them or by passing environmental legislation All of these issues are covered in this book Managers need better predictive models and robust data collections that help determine both site

specific and generalized responses to disturbance Multiple disturbances have a complex effect on both physical and biotic processes as they interact This book provides a wealth of detail about the process of disturbance and recovery as well as a synthesis of the current state of knowledge about disturbance theory with extensive documentation *Reindeer Husbandry and Global Environmental Change* Tim Horstkotte, Øystein Holand, Jouko Kumpula, Jon Moen, 2022-04-20 This volume offers a holistic understanding of the environmental and societal challenges that affect reindeer husbandry in Fennoscandia today Reindeer husbandry is a livelihood with a long traditional heritage and cultural importance Like many other pastoral societies reindeer herders are confronted with significant challenges Covering Norway Sweden and Finland three countries with many differences and similarities this volume examines how reindeer husbandry is affected by and responds to global environmental change and resource extraction in boreal and arctic social ecological systems Beginning with an historical overview of reindeer husbandry the volume analyses the realities of the present from different perspectives and disciplines Genetics behavioural ecology of reindeer other forms of land use pastoralists norms and knowledge bio economy and governance structures all set the stage for the complex internal and externally imposed dynamics within reindeer husbandry In depth analyses are devoted to particularly urgent challenges such as land use conflicts climate change and predation identified as having a high potential to shape the future pathways of the pastoral identity and productivity These futures with their risks and opportunities are explored in the final section offering a synthesis of the comparative approach between the three countries that runs as a recurring theme through the book With its richness and depth this volume contributes significantly to the understanding of the substantial impacts on pastoralist communities in northernmost Europe today while highlighting viable pathways to maintaining reindeer husbandry for the future This book will be of great interest to students and scholars of both the natural and social sciences who work on natural resource management global environmental change pastoralism ecology social ecological systems rangeland management and Indigenous studies The Open Access version of this book available at [www.taylorfrancis.com](http://www.taylorfrancis.com) has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license *Housing, Husbandry, and Welfare of Sheep and Goats* D'Anna J.
