Forests James Fargo Balliett, 2014-12-18 Forests are considered the lungs of the planet as they consume and store carbon dioxide and produce oxygen These biomes defined as ecological communities dominated by long lived woody vegetation historically have provided an economic foundation for growing nations supplying wood for buildings firewood for fuel and land for expanding cities and farms For centuries industrial nations in Europe and the United States have relied on large tracts of forestland for economic prosperity The research presented in this book reveals that population pressures are causing considerable environmental distress in even the most remote forest areas Three detailed case studies are presented The first provides an assessment of illegal logging deep in South America's Amazon rain forest a region closely tied to food and product demands thousands of miles away The second examines the effect of increased hunting in Central Africa's Congo forest which threatens wildlife especially mammal species with slower reproductive cycles Finally the third describes encroachment on old growth tropical forests on the Southern Pacific island of Borneo which today is better managed thanks to the collective planning and conservation efforts of the governments of Brunei Indonesia and Malaysia

Mountains James Fargo Balliett, 2016-07-01 Always awe inspiring mountainous areas contain hundreds of millions of years of history stretching back to the earliest continental landforms This book shows how mountains are characterized by their distinctive geological ecological and biological conditions Often they are so large that they create their own weather patterns They also store nearly one third of the world's freshwater in the form of ice and snow on their slopes Despite their daunting size and often formidable climates mountains are affected by growing local populations as well as distant influences such as air pollution and global climate change Three detailed case studies are presented The first shows how global warming in East Africa is harming Mount Kenya's regional population which relies on mountain runoff to irrigate farms for subsistence crops The second examines the fragile ecology of the South Island Mountain in New Zealand's Southern Alps and how development threatens the region's endemic plant and animal species The third discusses the impact of mountain use over time in New Hampshire's White Mountains where management efforts have been used to limit the

growing footprint of millions of annual visitors and alpine trekkers
