Book Frank Sherwin,2004-06-01 The oceans may well be Earth s final frontier These dark and sometimes mysterious waters
cover 71 percent of the surface area of the globe and have yet to be fully explored Under the waves a watery world of frail
splendor foreboding creatures and sights beyond imagination awaits The Ocean Book will teach you about Giant squid and
other monsters of the seas Centuries of ocean exploration Hydrothermal vents The ingredients that make up the ocean
Harnessing the ocean s energy Icebergs Coral reefs Ships submarines and other ocean vessels The major ocean currents El
Nino whirlpools and hurricanes Harvesting the oceans resources Whales dolphins fish and other sea creatures Learning
about the oceans and their hidden contents can be exciting and rewarding The abundance and diversity of life the wealth of
resources and the simple mysteries there have intrigued explorers and scientist for centuries A better understanding of our
oceans ensures careful conservation of their grandeur and beauty for future generations and leads to a deeper respect for
the delicate balance of life on planet Earth World Design Science Decade: Phase 1 Document 4 R. Buckminster Fuller,

The documents in this series originated with a proposal made by R Buckminster Fuller to the International Union of
Architects I U A at their VIIth Congress in London England in July 1961 launching the World Design Science Decade He
proposed then that the architectural schools around the world be encouraged by the I U A to invest the next ten years in a
continuing problem of how to make the total world s resources which in 1961 serve only 40% serve 100% of humanity
through competent design despite a continuing decrease of metal resources per capita In essence The World Design Science
Decade series of documents suggests in great detail ways in which world architectural schools and specifically their students
should initiate and assume The Design Science Decade The total series includes many of Fuller s most prescient ideas A note
from the series editor John McHale Though the language of some of the texts may seem difficult at first approach it should be
borne in mind that one of our major problems in thinking today 1965 is the use of language systems which still represent a
fixed structurally compartmentalized world view The terms available to us for the expression of dynamic rather than static
concepts are far from satisfactory Fuller s language is particularly representative of the transitional state of the western
world between the older traditional noun centered culture to its present day changing verb centered culture In his search for
an adequately descriptive terminology he tends to employ concepts and usages from many different fields juxtaposed in ways
which may be unfamiliar to those more customarily restrained within the vocabularies of particular disciplines Description by
