Active Food

Packaging M.L. Rooney,2012-12-06 Food packaging materials have traditionally been chosen to avoid unwanted interactions with the food During the past two decades a wide variety of packaging materials have been devised or developed to interact with the food These packaging materials which are designed to perform some desired role other than to provide an inert barrier to outside influences are termed active packaging The benefits of active packaging are based on both chemical and physical effects Active packaging concepts have often been presented to the food industry with few supporting results of background research This manner of introduction has led to substantial uncertainty by potential users because claims have sometimes been based on extrapolation from what little proven information is available The forms of active packaging have been chosen to respond to various food properties which are often unrelated to one another For instance many packaging requirements for post harvest horticultural produce are quite different from those for most processed foods The object of this book is to introduce and consolidate information upon which active packaging concepts are based Scientists technologists students and regulators will find here the basis of those active packaging materials which are either commercial or proposed The book should assist the inquirer to understand how other concepts might be applied or where they should be rejected

Antimicrobial compounds from natural sources Mirian A. F. Hayashi, Fernando César Bizerra, Pedro Ismael Da Silva Junior, 2014-08-29 Nature is a generous source of compounds with the potential to treat diseases including infectious diseases which is of utmost importance for modern medicine as antimicrobial resistances increase Known sources of natural compounds with valuable antimicrobial activity include medicinal plants and marine and terrestrial organisms such as fungi and bacteria Nevertheless there is still a vast fauna and flora that once systematically explored could provide additional antimicrobial leads and drugs Investigators are welcome to contribute original research and or review articles in this area

specifically with studies exploiting the mechanism of action and the structure activity aspects of natural compounds with antimicrobial activity that provide insights into potential ways to overcome antimicrobial resistance

Chilling Tolerance and Regulation of Horticultural Crops: Physiological, Molecular, and Genetic Perspectives Shifeng Cao,Diane Maria Beckles,Maria F. Drincovich,Isabel Lara,Julian C. Verdonk,Qiong Lin,Chongde Sun,Reinaldo Campos-Vargas,2025-01-27

Chilling injury affects crops in the tropical and subtropical regions Damage can include surface pitting discolouration internal breakdown water soaking failure to ripen growth inhibition wilting loss of flavour and decay Post harvest handling of these crops within a cold chain system that maintains the desired temperature and humidity range is essential to preserving quality and shelf life To counter chilling injury crops have developed complex tolerance mechanisms These mechanisms include stress perception signal transduction transcriptional activation of stress responsive target genes and synthesis of stress related proteins and other molecules Concurrently recent integration of molecular and omics based techniques to conventional breeding has vastly improved the screening efficiency of traits associated with chilling tolerance Thus understanding these physiological biochemical and molecular responses and tolerance mechanisms is crucial to developing engineering strategies enhancing cold stress tolerance

Fish Processing Technology George M. Hall,2012-12-06 As with the first edition this book includes chapters on established fish processes and new processes and allied issues The first five chapters cover fish biochemistry affecting processing curing surimi and fish mince chilling and freezing and canning These established processes can still show innovations and improved theory although their mature status precludes major leaps in knowledge and technology The four chapters concerned with new areas relevant to fish processing are directed at the increasing globalisation of the fish processing industry and the demands from legislation and the consumer for better quality safer products One chapter reviews the methods available to identify fish species in raw and processed products The increased demand for fish products and the reduced catch of commercially important species has lead to adulteration or substitution of these species with cheaper species The ability to detect these practices has been based on some elegant analytical techniques in electrophoresis
