## Frege's Puzzle Bradfords:

Logic Identity and Consistency] Pranab Kumar Sen, 1998      **Frege's Puzzle** Nathan U. Salmon, 1986 The nature of the information content of declarative sentences is a central topic in the philosophy of language The natural view that a sentence like John loves Mary contains information in which two individuals occur as constituents is termed the naive theory and is one that has been abandoned by most contemporary scholars This theory was refuted originally by philosopher Gottlob Frege His argument that the naive theory did not work is termed Frege's puzzle and his rival account of information content is termed the orthodox theory In this detailed study Nathan Salmon defends a version of the naive theory and presents a proposal for its extension that provides a better picture of information content than the orthodox theory gives He argues that a great deal of what has generally been taken for granted in the philosophy of language over the past few decades is either mistaken or unsupported and consequently much current research is focused on the wrong set of questions Salmon dissolves Frege's puzzle as it is usually formulated and demonstrates how it can be reconstructed and strengthened to yield a more powerful objection to the naive theory He then defends the naive theory against the new Frege puzzle by presenting an idea that yields both a surprisingly rich and powerful extension of the naive theory and a better picture of information content than that of the original orthodox theory Nathan Salmon is Professor of Philosophy University of California at Santa Barbara

A Bradford Book      **Epistemic Value** Adrian Haddock, Alan Millar (Ph. D.), Duncan Pritchard, 2009-09-03 Epistemic Value is a collection of new essays by leading epistemologists focusing on questions regarding the value of knowledge such as Is knowledge more valuable than true belief Is truth the central value informing epistemic appraisal or do other values enter the picture      *What It Is Like To Perceive* J. Christopher Maloney, 2018-06-15 Naturalistic cognitive science when realistically rendered rightly maintains that to think is to deploy contentful mental representations Accordingly conscious perception memory and anticipation are forms of cognition that despite their introspectively manifest differences may coincide in content Sometimes we remember what we saw other times we predict what we will see Why then does what it is like consciously to perceive differ so dramatically from what it is like merely to recall or anticipate the same Why if thought is just representation does the phenomenal character of seeing a sunset differ so stunningly from the tepid character of recollecting or predicting the sun's descent J Christopher Maloney argues that unlike other cognitive modes perception is in fact immediate direct acquaintance with the object of thought Although all mental representations carry content the vehicles of perceptual representation are uniquely composed of the very objects represented To perceive the setting sun is to use the sun and its properties to cast a peculiar cognitive vehicle of demonstrative representation This vehicle's embedded referential term is identical with and demonstrates the sun itself And the vehicle's self attributive demonstrative predicate is itself forged from a property of that same remote star So in this sense the perceiving mind is an extended mind Perception is unbrokered cognition of what is real exactly as it really is Maloney's theory of perception will be of great interest in the

philosophy of mind and cognitive science

**Knowledge, Language and Logic: Questions for Quine** A. Orenstein, P.

Kotatko, 2012-12-06 Quine is one of the twentieth century's most important and influential philosophers. The essays in this collection are by some of the leading figures in their fields and they touch on the most recent turnings in Quine's work. The book also features an essay by Quine himself and his replies to each of the papers. Questions are raised concerning Quine's views on knowledge, observation, holism, truth, naturalized epistemology, about language, meaning, the indeterminacy of translation, conjecture, and about the philosophy of logic, ontology, singular terms, vagueness, identity, and intensional contexts. Given Quine's preeminent position, this book must be of interest to students of philosophy in general, Quine aficionados, and most particularly to those working in the areas of epistemology, ontology, philosophies of language, of logic, and of science.

**Speaking My Mind** Dorit Bar-On, 2004-11-18

Dorit Bar-On develops and defends a novel view of avowals and self-knowledge. Drawing on resources from the philosophy of language, the theory of action, epistemology, and the philosophy of mind, she offers original and systematic answers to many long-standing questions concerning our ability to know our own minds. We are all very good at telling what states of mind we are in at a given moment. When it comes to our own present states of mind, what we say goes: an avowal such as "I'm feeling so anxious" or "I'm thinking about my next trip to Paris" is typically supposed to tell it like it is. But why is that? Why should what I say about my present mental states carry so much more weight than what others say about them? Why should avowals be more immune to criticism and correction than other claims we make? And if avowals are not based on any evidence or observation, how could they possibly express our knowledge of our own present mental states? Bar-On proposes a Neo-Expressivist view according to which an avowal is an act through which a person directly expresses rather than merely reports the very mental condition that the avowal ascribes. She argues that this expressivist idea, coupled with an adequate characterization of expression and a proper separation of the semantics of avowals from their pragmatics and epistemology, explains the special status we assign to avowals. As against many expressivists and their critics, she maintains that such an expressivist explanation is consistent with a non-deflationary view of self-knowledge and a robust realism about mental states. The view that emerges preserves many insights of the most prominent contributors to the subject while offering a new perspective on our special relationship to our own minds.

**What's the Meaning of "This"?** David F. Austin, 2019-06-30

A variety of examples in recent literature on philosophy of mind and language raise serious problems for the traditional analysis of belief and the other so-called propositional attitudes as a two-term relation between a believer and a proposition. Because of the attractiveness of the traditional analysis and the absence of a clear alternative, such examples raise genuine puzzles about belief. In this lucid and rigorous book, David F. Austin provides a new test case for any theory of the propositional attitudes. Focusing on a puzzle about beliefs that we express using demonstratives, this and that, Austin shows that a key doctrine in the analytic tradition, the doctrine of propositions, is threatened by inconsistency. The author first explains why the traditional doctrine requires

individual propositions to accommodate Kripkean intuitions for direct reference Austin then formulates a deep puzzle about demonstrative belief using the book's central example the Two Tubes case which involves simultaneous consistent occurrent demonstrative beliefs resulting from direct visual perception Austin argues that none of the leading propositional theories solves this puzzle nor do the self-attributive views of Chisholm and Lewis or Kaplan's three-term view Austin concludes that although his puzzle remains a puzzle it gives us reason to supplement rather than abandon the use of propositions in analyzing thought and he sketches a three-term Russell alternative      *Readings in the Philosophy of Language* Peter Ludlow, 1997 A central theme of this collection is that the philosophy of language at least a core portion of it has matured to the point where it is now being spun off into linguistic theory      **Perspectival Thought** François Recanati, 2007-09-27 Recanati examines the nature of thought and understanding and defends the idea that truth is relative to context The book will be of interest to those working in philosophy of language and linguistics as well as philosophers of mind epistemologists and psychologists and cognitive scientists      **On Quine** Paolo Leonardi, Marco Santambrogio, 1995-04-28 A collection of essays which critically evaluate the writings of Quine      **A Theory of Truthmaking** Jamin Asay, 2020-04-30 Demonstrates how truthmaking can be used to make progress all across philosophy but without its usual theoretical baggage      [Content, Cognition, and Communication](#) Nathan Salmon, 2007-03-29 Nathan Salmon presents a selection of nineteen of his essays from the early 1980s to 2006 on a set of closely connected topics central to analytic philosophy The book is divided into four thematic sections on direct reference apriority belief and the distinction between semantics and pragmatics      **The Routledge Handbook of Propositions** Chris Tillman, Adam Murray, 2022-09-30 Propositions are routinely invoked by philosophers linguists logicians and other theorists engaged in the study of meaning communication and the mind To investigate the nature of propositions is to investigate the very nature of our connection to each other and to the world around us As one of the only volumes of its kind The Routledge Handbook of Propositions provides a comprehensive overview of the philosophy of propositions from both historical and contemporary perspectives Comprising 33 original chapters by an international team of scholars the volume addresses both traditional and emerging questions concerning the nature of propositions and our capacity to engage with them in thought and in communication The chapters are clearly organized into the following three sections I Foundational Issues in the Theory of Propositions II Historical Theories of Propositions III Contemporary Theories of Propositions Essential reading for philosophers of language and mind and for those working in neighboring areas The Routledge Handbook of Propositions is suitable for upper level undergraduate study as well as graduate and professional research      *Context and Content* Robert C. Stalnaker, 1999-04-08 In *Context and Content* Robert Stalnaker develops a philosophical picture of the nature of speech and thought and the relations between them Two themes in particular run through these collected essays the role that the context in which speech takes place plays in accounting for the way language is used to express thought and the role of the external environment in determining the contents of our

thoughts Stalnaker argues against the widespread assumption of the priority of linguistic over mental representation which he suggests has had a distorting influence on our understanding The first part of the book develops a framework for representing contexts and the way they interact with the interpretation of what is said in them This framework is used to help to explain a range of linguistic phenomena concerning presupposition and assertion conditional statements the attribution of beliefs and the use of names descriptions and pronouns to refer Stalnaker then draws out the conception of thought and its content that is implicit in this framework He defends externalism about thought the assumption that our thoughts have the contents they have in virtue of the way we are situated in the world and explores the role of linguistic action and linguistic structure in determining the contents of our thoughts Context and Content offers philosophers and cognitive scientists a summation of Stalnaker's important and influential work in this area His new introduction to the volume gives an overview of this work and offers a convenient way in for those who are new to it The Oxford Cognitive Science series is a new forum for the best contemporary work in this flourishing field where various disciplines cognitive psychology philosophy linguistics cognitive neuroscience and computational theory join forces in the investigation of thought awareness understanding and associated workings of the mind Each book constitutes an original contribution to its subject but will be accessible beyond the ranks of specialists so as to reach a broad interdisciplinary readership The series will be carefully shaped and steered with the aim of representing the most important developments in the field and bringing together its constituent disciplines

Properties, Types and Meaning G. Chierchia, Barbara B.H. Partee, R.

Turner, 1988-12-31 This collection focuses on two interrelated problems which are central to the analysis of meaning intentionality and the nature of semantic categories Most of the problems that semantics currently faces call for a characterization of information bearing structures richer than one cast in terms of possible worlds and for a system of semantic categories more dynamic and flexible than the one stemming from standard type theory Back cover

*Privileged Access* Brie Gertler, 2017-03-02 How do you grasp the contents of your mind your desires your fears your sensations your beliefs We typically think that we are better able to discern our own mental states than others are But is this correct And if it is what explains your special or privileged access to your own states Privileged Access is a comprehensive anthology of new and seminal essays by leading philosophers about the nature of self knowledge Most of the essays are new including specially commissioned contributions from such prominent thinkers as Berm dez Dretske Lycan Sosa and others but the anthology also includes reprints of classic articles by Boghossian Shoemaker Wright and others The volume provides for an in depth understanding of contemporary answers to key philosophical questions which have strongly influenced developments in epistemology ontology and the philosophy of mind since Descartes Featuring an introductory chapter outlining the main currents of thought about self knowledge this comprehensive collection of cutting edge philosophical work will prove an invaluable resource for students and researchers alike

Mental Files François Recanati, 2012-12-06 François Recanati

presents his theory of mental files a new way of understanding reference in language and thought Linguistic expressions inherit their reference from the files that we associate with them which are classified according to their function which is to store information derived through certain types of relation to objects      Seven Puzzles of Thought Mark Sainsbury, Michael Tye, 2013-08-08 Sainsbury and Tye present a new theory originalism which provides natural simple solutions to puzzles about thought that have troubled philosophers for centuries They argue that concepts are to be individuated by their origin rather than epistemically or semantically Although thought is special no special mystery attaches to its nature      Metaphysics, Mathematics, and Meaning Nathan U. Salmon, 2005 Metaphysics Mathematics and Meaning brings together Nathan Salmon's influential papers on topics in the metaphysics of existence non existence and fiction He includes a previously unpublished essay and helpful new introduction to orient the reader
