Frequency Modulation:

Radio Frequency Modulation Made Easy Saleh Faruque, 2016-07-27 This book introduces Radio Frequency Modulation to a broad audience. The author blends theory and practice to bring readers up to date in key concepts underlying principles and practical applications of wireless communications. The presentation is designed to be easily accessible, minimizing mathematics and maximizing visuals.

Frequency Modulation Theory Jacques Fagot, Philippe Magne, 2013-10-22 Electronic and Instrumentation Volume 11. Frequency Modulation Theory: Application to Microwave Links covers the theoretical principles of microwave beam technique. This five-chapter text particularly discusses the propagation of the waves used, frequency modulation and noise, and sundry distortions liable to arise either in the course of propagation in the equipment and in the methods used for the transmission of the information. Chapter 1 examines the transfer of the radio frequency energy over a given path. This chapter describes the properties of propagation of radio waves including metric, decimetric, and centimetric through the troposphere. Chapter 2 concerns all the general problems of frequency modulation, while chapter 3 deals with the propagation distortion which is apparent in a variable velocity guided transmission channel and which appears on an echoing path either in free space or over a badly matched feeder. Chapter 4 discusses the complete problem of telephony and television transmissions over radio links. This chapter also considers in detail the requisite conditions for meeting the international standards. Chapter 5 deals with all the applied techniques with an emphasis on radio link equipment. This book will be of great value to students and non-specialized and specialized engineers who wish to become familiar with microwave beam technique.

Frequency Modulation Theory Jacques Fagot, Philippe Magne, 2014-07-03 Electronics and Instrumentation Volume 11. Frequency Modulation Theory: Application to Microwave Links provides information pertinent to the fundamental aspects of microwave beam techniques. This book discusses the development in the application of frequency modulation. Organized into five chapters, this volume begins with an overview of the transfer of the radio frequency energy over a given path. This text then examines all the general problems of frequency modulation, including principle band covered distortion and improvement of the signal to noise ratio. Other chapters deal with propagation distortion that is apparent in a variable velocity guided transmission channel. This book discusses as well the complete problem of telephony and television transmission over radio links and considers the requisite conditions for meeting the international standards. The final chapter deals with all the applied techniques concerned with radio link equipment that deals with a large number of general problems. This book is a valuable resource for students and engineers.

Smart Robust Operation and Trading of Integrated Energy Systems with Low Pollution Goals Kaiping Qu, Yue Zhou, Xin Fang, Shuli Wen, Shiwei Xie, 2024-09-23 To mitigate two major environmental concerns of global warming and air pollution renewable energies with uncertainty are increasingly deployed in power systems which challenge the system's secure operation A single system usually has limited adjusting ability In contrast integrated energy systems such as electricity gas electricity traffic electricity heat and transmission distribution coordinated systems enhance the regulating ability of renewable energy accommodation and environmental protection The operation of integrated energy systems will meet three essential requirements low pollution attribute robustness and cooperativity However the diversity of uncertainty conditions the complementarity of new energy accommodation among systems the conflict of interest between systems and the dispatch autonomy of systems challenge the requirements mentioned above The main goal of this Research Topic includes

- 1 Propose more effective trading mechanisms or control strategies for carbon and air pollutant emissions
- 2 Fully use complementary effects between electric power natural gas heat hydrogen and traffic systems
- 3 Realize the coordinated operation of integrated energy systems with limited information interaction and ensured dispatch autonomy
- 4 Improve the robustness of integrated energy systems under diversified uncertainty conditions
- 5 Apply data based reinforcement learning methods for the dynamic decision of smart integrated energy systems under complex environments
