

The CAGED Sequence - Diatonics

When joined end to end, the Diatomic Scalar Forms create a continuous pattern of notes along the fretboard as depicted in the following graph. As with the pentatonic, this now is extended as a bridge to enable you to visualize the Scalar Forms and Lead Patterns at both of the same whorl.

In order for a player to make use of the entire range of linear notes, they must again be reorganized to permit fluid motion from one position to another. This enables us to use a variety of techniques and combinations that would not otherwise be possible and also allows for greater access to the fretboard.

The next step is to divide the scores into more playable groupings based on the most regular or symmetrical groupings.

Again, playing to and from the first and last notes in the pattern, will result in a complete fretboard scale form, and will be correct guitar-scale playing to and from the Targem will result in a complete scale and will be correct music-wise. Since more notes are available with the diatonic than with the pentatonic, there are also more possible combinations.

There's some benefit in the technical department, also. The discs do provide a physical advantage in the gathering in the way of notes per song. With respect to velocity and picking technique, what was relatively difficult to negotiate because of changing strings after only two notes with the Pentaton Scale Forms, will now be somewhat easier since the distances generally have three notes per string.

Diatonic Lead Patterns

The new four-plate Lead patterns are shown in the left-hand column. On the right side, each has been divided into small or sub-groups. The sub-groups illustrate in each repeating series note patterns of which each lead pattern is composed. To which each series is three complete notes. Some more notes have been added to each line where the pattern repeats again, showing your neighbor has the real notes.

with a DLPN, and in order to attain its full effect, a new technique will also be introduced to enable the stores from here to continue in the same string. No promise is a guarantee since the buying oil program is a continuous one. The previous had completely ceased since the previous season. This is detailed further on the next page along with the suggested recommendations.

in developing each Diatonic Lead pattern and its variations, we are looking for an inherent symmetry in our choice of sub-groupings. The ones that are easiest to play and remember will get the most use. Instant Lead Patterns I and II correspond with the Pre-synthetic Lead Patterns, naturally when the pre-synthesizers have five notes in each sub-group, the Diatonics have seven. When DLP I and II are combined, as with the pre-synthesizers, they account for every note in the five basic Diatonic Scale Forms.

The numbers in the left hand graphs are the values in order ascending, and the numbers in the right column show the sum of each sub-group.

The Scale Patterns are irregular along patterns in a single position. The Leaf Patterns are regular along patterns in many positions.
