

difficult, but necessary, task of bridging the gap between *in vitro* studies, animal experimentation and human observations in the areas of the anatomy of the ventral striatum, the pharmacology of the mesolimbic DA system and the associated psychological process of motivation.

The contributors give critical overviews of the areas of endeavour relevant to the topic under discussion as well as thorough accounts of the experimental work leading to the conclusions described. In addition there are discussions of potentially fertile areas for future research.

A central theme of the book is the role of the mesolimbic DA system in motivation. It is within this framework that many of the experimental observations detailed in the book are placed. However, as the editors point out in a summary chapter, there is still ignorance as to how a specific motivationally significant stimulus is able to cause the selection of an appropriate action. Although not stated as explicitly, the final chapter in the book, on the DA hypotheses of schizophrenia and mood disorders, provides an example of the gulf between the very detailed descriptions of animal neurophysiology and the assumptions, generalisations and caveats that characterise discussion of the physiological bases of human psychopathology.

The nature of the book, which on one hand provides detailed research-based observations, brings with it some predictable problems. It is composed of 24 chapters divided into four sections. There are 66 contributors and two editors. There is a moderate amount of overlap between the introductory parts of many of the chapters within sections but apart from the final three chapters there is very little cross-referencing within the book. Hence it is difficult to obtain an overview or to follow a theme that occurs in more than one chapter, without a considerable amount of reading.

However, the book is a valuable source of experimental data in an area of great research activity across a number of specialities. The mesolimbic DA system may prove to be of central importance in the aetiology and treatment of many behavioural and psychiatric disturbances. In addition, the insights into mechanisms of cerebral activity that have been obtained in the study of this system are likely to be relevant to other brain systems and properties.

Freud Evaluated—The Completed Arc: Advances in Psychology 75. By MALCOLM MACMILLAN. New York: Elsevier Science Publishers, 1991. 687 pp. \$140.00.

This book is somewhat of a wolf in sheep's clothing. Its curious title seems hardly guaranteed to give it a large readership, which in my view is regrettable.

We have here a readable, detailed and scholarly account of the sociopolitical context from which Freud derived his theories. The author describes how what was originally a series of lectures came to be expanded into a comprehensive critique of psychoanalysis. His text is clear, precise, factual and detailed. He lets the evidence make its own case through a painstaking dissection of the underlying assumptions—psychological, social and philosophical—on which psychoanalysis is built.

Although the style is dense, the arguments are carefully reasoned. In particular, the critique of the concept of free association and its postulated contamination by unconscious suggestion from analyst to patient, merits careful study. Through placing the critique firmly in its historical context and exploring the roots of each strand of Freud's thinking with direct reference to the source material one can form one's own conclusions.

The book is divided into four sections: Underlying assumptions—exploring the scientific milieu of the latter half of the 19th century, in particular the phenomena associated with hysteria, hypnosis and determinism; First theories and applications—a reasoned critique of free association and of the principles underlying the theory of infantile sexuality; The final synthesis—tracing the development of Freud's ideas to their conclusion; Evaluation—a critique of psychoanalysis as a therapy, a method and a science.

The history of criticism in psychoanalysis does not augur well for the fate of this book. Perhaps what distinguishes it from its predecessors is the dispassionate quality of the argument. MacMillan has a formidable grasp of the history of philosophy of science compared with which Freud's reasoning crumbles alarmingly.

In case it should be thought that the arguments are of limited and mainly historical relevance, the central thesis of this book is that underlying assumptions, often of dubious pedigree, can shape and distort current thinking by limiting our freedom to question and to offer alternative explanatory hypotheses.
