beginning of a dynamic economic and stock market upswing in the U S in the mid 1990s marked the start of a new era the times of the new economy This phenomenon has been under intense discussion ever since both in the political arena as well as among scientists Thereby the somewhat glamorous term new economy reflects the conviction held by its proponents that the use of new technologies will lead to a never ending acceleration of technological progress and economic welfare The origins of this development date back a long time More than 30 years ago the starting point was the basic innovation digitization Production as well as application of information and communications technologies ICT are based on this principle At the beginning of the seventies the first microprocessor was produced Some ten years later the first personal computer was brought onto the market The commercial use of the Internet has begun in the mid nineties In view of the economic boom in the U S accompanying the introduction of the Internet the question arises as to what extent the new economy actually has exerted lasting positive effects on productivity not only in the United States but also worldwide Inspired by these developments the Federal Ministry of Economics and Technology commissioned RWI Essen to study the driving forces of the new economy In this report the trends of the ICT sector and of the use of ICT products are analyzed with respect to the overall economic effects in Germany in comparison to the U S Further analyses were carried out regarding the intensity and effects of e business Finally the influence of different methods of price measurement on productivity was analysed since this is important for international comparisons of total factor productivity The study culminates in a growth accounting calculation separating the contributions to economic growth by capital labor and technological progress

Venture Capital Stefano Caselli, Stefano Gatti, 2012-11-02 Josh Lerner Jacob H Schiff Professor of Investment Banking Harvard Business School and National Bureau of Economic Research During much of the 1970s and 1980s venture capital and private equity remained largely a United States phenomena Over the past decade however private equity has spread around the globe taking particularly firm root in Western Europe indeed growing 4 700% since 1984 through 2001 Today Europe is the dominant private equity market outside the United States Despite this tremendous growth and the current recessionary climate there is ample room for attractive expansion in European private equity both for venture capital and private equity There have been several reasons for this growth The first has been the internationalization of capital sources The key sources of capital for European private equity funds have traditionally been segmented by national boundaries historically the pattern in Europe has been for private equity groups to raise funds from banks insurance companies and government bodies in their own country with little involvement from foreign investors These barriers are now breaking down for two principal reasons First institutional investors particularly in the United States have become increasingly interested in European funds Second many international private equity firms have become more active in Europe A second driver of growth has been the entry of new talent into the industry Traditionally many European private equity investors had come from financial or consulting backgrounds rather than from operating roles

Oswalt,2012-12-06 The motivation for these volumes is to provide a vision for the future of small telescopes While this is an admirable task ultimately I believe that as happens all the time in science the prognostications will be overtaken by a rapidly changing scientific reality As Virginia Trimble points out in chapter 1 the kinds of big questions that face us as astronomers today are rather different than the ones that drove the construction of astronomical facilities through much of the twentieth century Right now it appears that small telescopes will not have a lot of influence in answering those questions though they will of course contribute enormously to the many issues discussed throughout the three volumes We are on the verge of opening a whole new parameter space that may revolutionize the way we think of small telescopes and their role in

astronomy the domain of the rapidly variable sky While the LSST is the most prominent example it is a long way in the future Nemiroff Rafert chapter 2 consider the value of monitoring large parts of the sky on a continuous basis using technology similar to a webcam They have installed their CONCAM2 at four locations including Kitt Peak A related project built and operated by the Harvard graduate student Gaspar Bakos HAT 1 Hungarian Automated Telescope also is in operation at Kitt Peak

The Future of Small Telescopes in the New Millennium: The telescopes we use Terry D. Oswalt, 2003 This title details the essential roles that small telescopes should play in 21st century science and how their future productivity can be maximized Over 70 experts from all corners of the international astronomical community have created a reference on the future of big science with small telescopes at national facilities and their omission from national science priority studies the oft lamented demise of the small telescope has been greatly exaggerated In fact the future of these workhorses of astronomy will be brighter than ever if creative steps are taken now This three volume set defines essential roles that small telescopes should play in 21st century science and the ways in which a productive future for them can be realized A wide cross section of the astronomical community has contributed to a definitive assessment of the present and a vision for the future radio and space based facilities face problems in scientific prioritization and funding It highlights how current small facilities are evolving to meet the scientific priorities and economical realities of the 21st century through standardization of instrumentation use of off the shelf technology specialization optical improvements new modes of scheduling automation and internet access
