environments **Enterprise Information Systems II** B. Sharp, Joaquim Filipe, José Cordeiro, 2013-11-11 This book comprises the refereed papers together with the invited keynote papers presented at the Second International Conference on Enterprise Information Systems The conference was organised by the School of Computing at Staffordshire University UK and the Escola Superior de Tecnologia of Setubal Portugal in cooperation with the British Computer Society and the International Federation for Information Processing Working Group 8 1 The purpose of this 2nd International Conference was to bring together researchers engineers and practitioners interested in the advances in and business applications of information systems The papers demonstrate the vitality and vibrancy of the field of Enterprise Information Systems The research papers included here were selected from among 143 submissions from 32 countries in the following four areas Enterprise Database Applications Artificial Intelligence Applications and Decision Support Systems Systems Analysis and Specification and Internet and Electronic Commerce Every paper had at least two reviewers drawn from 10 countries The papers included in this book were recommended by the reviewers On behalf of the conference organising committee we would like to thank all the members of the Programme Committee for their work in reviewing and selecting the papers that appear in this volume We would also like to thank all the authors who have submitted their papers to this conference and would like to apologise to the authors that we were unable to include and wish them success next year Advances in Intelligent Modelling and Simulation Aleksander Byrski, Zuzana Oplatková, Marco Carvalho, Marek Kisiel-Dorohinicki, 2012-04-25 The human capacity to abstract complex systems and phenomena into simplified models has played a critical role in the rapid evolution of our modern industrial processes and scientific research As a science and an art Modelling and Simulation have been one of the core enablers of this remarkable human trace and have become a topic of great importance for researchers and practitioners This book was created to compile some of the most recent concepts advances challenges and ideas associated with Intelligent Modelling and Simulation frameworks tools and applications The first chapter discusses the important aspects of a human interaction and the correct interpretation of results during simulations The second chapter gets to the heart of the analysis of entrepreneurship by means of agent based modelling and simulations The following three chapters bring together the central theme of simulation frameworks first describing an agent based simulation framework then a simulator for electrical machines and finally an airborne network emulation environment The two subsequent chapters discuss power distribution networks from different points of view anticipation and optimization of multi echelon inventory policy After that the book includes also a group of chapters discussing the mathematical modelling supported by verification simulations and a set of chapters with models synthesised by means of artificial intelligence tools and complex automata framework Lastly the book includes a chapter introducing the use of graph grammar model for generation of three-dimensional computational meshes and a chapter focused on the experimental and computational results regarding simulation of aero engine vortices Authors believe that this book is a valuable reference to researchers and practitioners in

the field as well as an inspiration to those interested in the area of Intelligent Modelling and Simulation **Modeling and Simulation-Based Systems Engineering Handbook** Daniele Gianni, Andrea D'Ambrogio, Andreas Tolk, 2018-10-09 The capability modeling and simulation M S supplies for managing systems complexity and investigating systems behaviors has made it a central activity in the development of new and existing systems However a handbook that provides established M S practices has not been available Until now Modeling and Simulation Based Systems Engineering Handbook details the M S practices for supporting systems engineering in diverse domains It discusses how you can identify systems engineering needs and adapt these practices to suit specific application domains thus avoiding redefining practices from scratch Although M S practices are used and embedded within individual disciplines they are often developed in isolation However they address recurring problems common to all disciplines The editors of this book tackled the challenge by recruiting key representatives from several communities harmonizing the different perspectives derived from individual backgrounds and lining them up with the book's vision The result is a collection of M S systems engineering examples that offer an initial means for cross domain capitalization of the knowledge methodologies and technologies developed in several communities These examples provide the pros and cons of the methods and techniques available lessons learned and pitfalls to avoid As our society moves further in the information era knowledge and M S capabilities become key enablers for the engineering of complex systems and systems of systems Therefore knowledge and M S methodologies and technologies become valuable output in an engineering activity and their cross domain capitalization is key to further advance the future practices in systems engineering This book collates information across disciplines to provide you with the tools to more efficiently design and manage complex systems that achieve their goals **AI, Simulation and Planning in High Autonomy Systems**, 1993 Annotation Proceedings of the Fourth Annual Conference on title held in Tucson Arizona September 1993 Contributors explore the perplexing theme of integrating virtual reality and model based environments Discussion encompasses VR concepts technology and applications No index Annotation copyright by Book News Inc Portland OR Massively Parallel Processing Applications and Development L. Dekker, W. Smit, J.C. Zuidervaat, 2013-10-22 The contributions of a diverse selection of international hardware and software specialists are assimilated in this book's exploration of the development of massively parallel processing MPP The emphasis is placed on industrial applications and collaboration with users and suppliers from within the industrial community consolidates the scope of the publication From a practical point of view massively parallel data processing is a vital step to further innovation in all areas where large amounts of data must be processed in parallel or in a distributed manner e.g fluid dynamics meteorology seismics molecular engineering image processing parallel data base processing MPP technology can make the speed of computation higher and substantially reduce the computational costs However to achieve these features the MPP software has to be developed further to create user friendly programming systems and to become transparent for present day computer software Application of novel electro

optic components and devices is continuing and will be a key for much more general and powerful architectures. Vanishing of communication hardware limitations will result in the elimination of programming bottlenecks in parallel data processing. Standardization of the functional characteristics of a programming model of massively parallel computers will become established. Then efficient programming environments can be developed. The result will be a widespread use of massively parallel processing systems in many areas of application.

Computational Systems Analysis 1992 Achim Sydow, 1992. Extended tools for analyzing and understanding complex systems and their applications in natural management engineering and social sciences are topics of the 4th International Symposium on Systems Analysis and Simulation held in Berlin August 25-28, 1992. The development of simulation tools is very much driven by the tasks of systems analysis and at the same time by new architectures of computers like vector and parallel computers. Such extended simulation tools support the modelling process itself as well as the experimentation process with the simulated model. Systems analysis by means of such advanced tools here is briefly named Computational Systems Analysis. See also Computational Systems Analysis: Topics and Trends, ed. by A. Sydow, Elsevier, 1992. It connects systems theory, numerical mathematics, control and decision sciences with applying sciences like physics, engineering sciences, biology, economy and many others on the basis of computer technique in order to analyze, construct and control systems. This volume contains papers which were accepted for presentation at the symposium. It reflects activities and the state of the art in that area.

Seeing Between the Pixels Christine Strothotte, Thomas Strothotte, 2012-12-06. Pictures are at the heart of how we communicate with computers, emblematic of our current fascination with multimedia and web-based computing. Nevertheless, most of us know far less about pictures and the way in which they work than we know about the text that often accompanies them. In an attempt to understand pictures, perhaps the most fundamental question we can ask is: What is a picture? What is it that objects as diverse as icons, bar charts, paintings and photographs have in common that makes us refer to all of them as pictures? And what is it about pictures that convinces us to use them instead of or in addition to text? We often talk about how pictures depict things. But even the process of depiction seems to differ from one picture to another. On a computer, we may use a paint system to guide a virtual brush over the screen, a video camera to capture a live image, a spreadsheet to automatically generate a corresponding bar chart, or a rendering system that models the interactions of synthetic lights, objects and cameras. Is there some underlying property that these processes all share? Computer scientists are used to thinking of pictures in terms of their representation: an array of pixels, a list or hierarchy of graphics primitives, or even a program written in a language such as PostScript.
