Stuart L Hart,2019-03-04 As Environmental Impact Statements EIS become increasingly important in the policymaking process it is vital that they be as complete and accurate as possible The authors of this volume consider ways in which the development and evaluation of scientific and technical information for EIS can be improved Addressing key legal social political Environmental Infrastructure Management J.J. Boland,M.E. Bell,Eugene Z. Stakhiv,2013-06-29 Environmental issues continue to burden governments and economies throughout the post communist countries of Central and Eastern Europe and the newly independent states of the former Soviet Union Severe environmental degradation is endemic to the region the existing environmental infrastructure is often inadequate significant new investment is perhaps decades away and there is little knowledge of advanced techniques for impact assessment project evaluation and project financing The first two papers of Environmental Infrastructure Management survey available cost effective technology for solid waste treatment and air pollution control providing guidance for possible incremental additions to existing infrastructure There is also a discussion of transferable pollution credits as an instrument in regulating air quality The discussion of economic incentives also embraces user fees and other pollution control instruments A range of methods is presented for the evaluation and comparison of alternative projects where data are poor or scarce Canadian experience with specific capital budgeting techniques is given comprehensive attention Debt financing strategies are addressed in the context of present day Ukraine Finally an outline is given of a general framework for making decisions about environmental projects including the use of environmental impact assessments Community Impact Evaluation Nathaniel Lichfield,2005-08-10 A work summarizing the pioneering approach of the author to public interest decision taking in the field of urban regional planning This book is aimed at students researchers and professionals in planning **Cost-Benefit Analysis** Euston Quah,Raymond Toh,2011-10-20 Cost benefit analysis CBA is the systematic and analytical process of comparing benefits and costs in evaluating the desirability of a project or programme often of a social nature and for society as a whole CBA is fundamental to government decision making and can be an effective tool for informed decisions on the use of society s scarce resources This book highlights the main concepts and principles of cost benefit analysis used in real life cases and actual applications The book contains rich cases materials and examples of real life CBA applications with emphasis both on physical and non physical projects and infrastructure developments in Asia and beyond The book also discusses techniques frequently used in applied CBA The first part of the book introduces the key concepts and principles of CBA before Part Two covers some pertinent issues relating to CBA such as the recent trend of using behavioural economics and frequently used techniques in applied CBA Finally in Part Three case studies are written up to illustrate how CBA is done and questions for the readers and students to ponder are raised at the end of each chapter The scope of the case studies is more than just physical infrastructures but will include public sector policies and programmes covering a host of social policies as in health education social welfare programmes and the environment For each case there will be illustrations of the key concepts and

principles of CBA used Undertakings analyzed include the Three Gorges Dam in China the 2008 Beijing Olympics the Costs of Global Warming the Jamuna Bridge in Bangladesh The case studies many of which have taken or are to take place in developing countries provide a rich background to the principles of the method and are accompanied by a wealth of explanatory material As well as being suitable for courses in Cost Benefit Analysis Public Finance Environmental and Health Economics the book should be of interest to all public policy decision makers and planners *Environmental Guidelines for Resettlement Projects in the Humid Tropics* Peter R. Burbridge, Richard B. Norgaard, Gary S. Hartshorn, 1988-01-01 This report is the first result of an ongoing effort to provide practical advice and guidance to the specialists who formulate resettlement and other development projects and to the environmental specialist who review these projects In the first part an overview of the impact of resettlement in the humid Tropics is given In the second part principles and checklists for the formulation and assessment of resettlement are presented **Ranking Hazardous-Waste Sites for Remedial Action** National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Remedial Action Priorities for Hazardous Waste Sites, 1994-02-01 The United States may not be able to make all hazardous waste sites as clean as possible Therefore priorities must be set for the timing of waste site remediations This book assesses several of the government's methods of ranking sites for remediation and compares the performance of three such models using input data developed from the same set of waste sites Because inconsistent methods may be neither effective nor prudent the book recommends that the government consider developing a unified national approach to setting priorities to replace the current multiple approaches *Environmental Politics* Shannon O'Lear, 2010-08-19 Shannon O Lear brings a geographer's perspective to environmental politics The book considers issues of climate change energy food security toxins waste and resource conflict to explore how political economic ideological and military power have contributed to the generation of environmental issues and the formation of dominant narratives about them The book encourages the reader to think critically about the power dynamics that shape and limit how we think about environmental issues and to expand the reader's understanding of why it matters that these issues are discussed at particular spatial scales Applying a geographer's sense of scale and power leads to a better understanding of the complexity of environmental issues and will help formulate mitigation and adaptation strategies The book will appeal mainly to advanced students and researchers from a geography background but also to social and political scientists who wish to look at the topic from this different perspective Managing European Coasts Jan E. Vermaat, Laurens Bouwer, Kerry Turner, W. Salomons, 2005-09-26 Coastal zones play a key role in Earth System functioning and form an edge for society providing a significant contribution to the life support systems Goods and services derived from coastal systems depend strongly on multiple transboundary interactions with the land atmosphere open ocean and sea bottom Increasing demands on coastal resources driven by human habitation food security recreation and transportation accelerate the exploitation of the coastal

landscape and water bodies Many coastal areas and human activities are subject to increasing risks from natural and man induced hazards such as flooding resulting from major changes in hydrology of river systems that has reached a global scale Changes in the hydrological cycle coupled with changes in land and water management alter fluxes of materials transmitted from river catchments to the coastal zone which have a major effect on coastal ecosystems The increasing complexity of underlying processes and forcing functions that drive changes on coastal systems are witnessed at a multiplicity of temporal and spatial scales
