Evaluation And Decision Models A Critical Perspective:

Evaluation and Decision Models Denis Bouyssou, 2000-11-30 This text provides a critical thinking framework for all individuals utilizing decision and evaluation models It argues that there is no best decision or evaluation model but that decision makers must understand the principles of formal evaluation and decision models and apply them critically

Evaluating and Applying Decision Models Denis Bouyssou, Thierry Marchant, Patrice Perny, Marc Pirlot, Alexis Tsoukias, Philippe Vincke, 2012-05-08 In the first volume of the set *Evaluation and Decision Models A Critical Perspective* the purpose is to provide a critical thinking framework for all individuals utilizing decision and evaluation models whether it be for research or applications In the book the authors criticized formal models while pointing out where these models can be useful On the other hand *Evaluation and Decision Models with Multiple Criteria* is a guide a way of reasoning aimed at helping the analyst to choose a model and use it consistently The authors propose often using an axiomatic point of view a sound analysis of techniques aimed at supporting the decision aiding process The presentation is carried out within a unique framework that can be extended to most decision and evaluation models as a decision aiding methodology *Evaluation and Decision Models* Denis Bouyssou, Thierry Marchant, Marc Pirlot, Patrice Perny, Alexis Tsoukias, P. Motivations Deciding is a very complex and difficult task Some people even argue that our ability to make decisions in complex situations is the main feature that distinguishes us from animals it is also common to say that laughing is the main difference Nevertheless when the task is too complex or the interests at stake are too important it quite often happens that we do not know or we are not sure what to decide and in many instances we resort to a decision support technique an informal one we toss a coin we ask an oracle we visit an astrologer we consult an expert we think or a formal one Although informal decision support techniques can be of interest in this book we will focus on formal ones Among the latter we find some well known decision support techniques cost benefit analysis multiple criteria decision analysis decision trees But there are many other ones sometimes not presented as decision support techniques that help making decisions Let us cite but a few examples When the director of a school must decide whether a given student will pass or fail he usually asks each teacher to assess the merits of the student by means of a grade The director then sums the grades and compares the result to a threshold When a bank must decide whether a given client will obtain a credit or not a technique called credit scoring is often used

Evaluation and Decision Models Denis Bouyssou, Thierry

Marchant, Marc Pirlot, 2000-11-01 *Intelligent Strategies for Meta Multiple Criteria Decision Making* Thomas Hanne, 2012-12-06 Multiple criteria decision making research has developed rapidly and has become a main area of research for dealing with complex decision problems which require the consideration of multiple objectives or criteria Over the past twenty years numerous multiple criterion decision methods have been developed which are able to solve such problems However the selection of an appropriate method to solve a particular decision problem is today's problem for a decision support researcher and decision maker *Intelligent Strategies for Meta Multiple Criteria Decision Making* deals centrally with the problem of the numerous MCDM methods that can be applied to a decision problem The book refers to this as a meta decision problem and it is this problem that the book analyzes The author provides two strategies to help the decision makers select and design an appropriate approach to a complex decision problem Either of these strategies can be designed into a decision support system itself One strategy is to use machine learning to design an MCDM method This is accomplished by applying intelligent techniques namely neural networks as a structure for approximating functions and evolutionary algorithms as universal learning methods The other strategy is based on solving the meta decision problem interactively by selecting or designing a method suitable to the specific problem for example the constructing of a method from building blocks This strategy leads to a concept of MCDM networks Examples of this approach for a decision support system explain the possibilities of applying the elaborated techniques and their mutual interplay The techniques outlined in the book can be used by researchers students and industry practitioners to better model and select appropriate methods for solving complex multi objective decision problems **Grid Resource Management** Jarek Nabrzyski, Jennifer M. Schopf, Jan Weglarz, 2012-12-06 *Grid Resource Management State of the Art and Future Trends* presents an overview of the state of the field and describes both the real experiences and the current research available today Grid computing is a rapidly developing and changing field involving the shared and coordinated use of dynamic multi institutional resources Grid resource management is the process of identifying requirements matching resources to applications allocating those resources and scheduling and monitoring Grid resources over time in order to run Grid applications as efficiently as possible While Grids have become almost commonplace the use of good Grid resource management tools is far from ubiquitous because of the many open issues of the field including the multiple layers of schedulers the lack of control over resources the fact that resources are shared and that users and administrators have conflicting performance goals **Stochastic Modeling and Optimization of Manufacturing Systems and Supply Chains** J. George Shanthikumar, David D. Yao, W.H.M. Zijm, 2012-12-06 This volume originates from two workshops both focusing on themes that are reflected in the title of the volume The first workshop took place at Eindhoven University of Technology April 24-26 2001 on the occasion of the University granting a doctorate honoris causa to Professor John A Buzacott The second workshop was held on June 15 2002 at Cornell University preceding the annual INFORMS/MSOM Conference honoring John's retirement and his lifetime

contributions Each of the two workshops consisted of about a dozen technical presentations The objective of the volume however is not to simply publish the proceedings of the two workshops Rather our objective is to put together a select set of articles each organized into a well written chapter focusing on a timely topic Collected into a single volume these chapters aim to serve as a useful reference for researchers and practitioners alike and also as reading materials for graduate courses or seminars

Evolutionary Optimization Ruhul Sarker,Masoud Mohammadian,Xin Yao,2006-04-11 Evolutionary computation techniques have attracted increasing attention in recent years for solving complex optimization problems They are more robust than traditional methods based on formal logics or mathematical programming for many real world OR MS problems Evolutionary computation techniques can deal with complex optimization problems better than traditional optimization techniques However most papers on the application of evolutionary computation techniques to Operations Research Management Science OR MS problems have scattered around in different journals and conference proceedings They also tend to focus on a very special and narrow topic It is the right time that an archival book series publishes a special volume which includes critical reviews of the state of art of those evolutionary computation techniques which have been found particularly useful for OR MS problems and a collection of papers which represent the latest development in tackling various OR MS problems by evolutionary computation techniques This special volume of the book series on Evolutionary Optimization aims at filling in this gap in the current literature The special volume consists of invited papers written by leading researchers in the field All papers were peer reviewed by at least two recognised reviewers The book covers the foundation as well as the practical side of evolutionary optimization

Dynamic Portfolio Strategies: quantitative methods and empirical rules for incomplete information Nikolai

Dokuchaev,2012-12-06 Dynamic Portfolio Strategies Quantitative Methods and Empirical Rules for Incomplete Information investigates optimal investment problems for stochastic financial market models It is addressed to academics and students who are interested in the mathematics of finance stochastic processes and optimal control and also to practitioners in risk management and quantitative analysis who are interested in new strategies and methods of stochastic analysis While there

are many works devoted to the solution of optimal investment problems for various models the focus of this book is on analytical strategies based on technical analysis which are model free The technical analysis of these strategies has a number of characteristics Two of the more important characteristics are 1 they require only historical data and 2 typically they are more widely used by traders than analysis based on stochastic models Hence it is the objective of this book to reduce the gap between model free strategies and strategies that are optimal for stochastic models We hope that researchers students and practitioners will be interested in some of the new empirically based methods of technical analysis strategies suggested in this book and evaluated via stochastic market models

Real-Time Management of Resource Allocation Systems Spyros A. Reveliotis, 2006-07-18 Real Time Management of Resource Allocation Systems focuses on the problem of managing the resource allocation taking place within the operational context of many contemporary technological applications including flexibly automated production systems automated railway and or monorail transportation systems electronic workflow management systems and business transaction supporting systems A distinct trait of all these applications is that they limit the role of the human element to remote high level supervision while placing the burden of the real time monitoring and coordination of the ongoing activity upon a computerized control system

Hence any applicable control paradigm must address not only the issues of throughput maximization work in process inventory reduction and delay and cost minimization that have been the typical concerns for past studies on resource allocation but it must also guarantee the operational correctness and the behavioral consistency of the underlying automated system The resulting problem is rather novel for the developers of these systems since in the past many of its facets were left to the jurisdiction of the present human intelligence It is also complex due to the high levels of choice otherwise known as flexibility inherent in the operation of these environments
