Event History Analysis Regression For Lo:

Event History Analysis With Stata Hans-Peter Blossfeld, Katrin Golsch, Gotz Rohwer, 2007-02-02 Event History Analysis With Stata provides an introduction to event history modeling techniques using Stata version 9 a widely used statistical program that provides tools for data analysis The book emphasizes the usefulness of event history models for causal analysis in the social sciences and the application of continuous time models T *Event History Analysis* Paul David Allison, 1984-11 Drawing on recent event history analytical methods from biostatistics engineering and sociology this clear and comprehensive monograph explains how longitudinal data can be used to study the causes of deaths crimes wars and many other human events Allison shows why ordinary multiple regression is not suited to analyze event history data and demonstrates how innovative regression like methods can overcome this problem He then discusses the particular new methods that social scientists should find useful **Event History Analysis with R** Göran Broström, 2021-11-11 With an emphasis on social science applications Event History Analysis with R Second Edition presents an introduction to survival and event history analysis using real life examples Since publication of the first edition focus in the field has gradually shifted towards the analysis of large and complex datasets This has led to new ways of tabulating and analysing tabulated data with the same precision and power as that of an analysis of the full data set Tabulation also makes it possible to share sensitive data with others without violating integrity The new edition extends on the content of the first by both improving on already given methods and introducing new methods There are two new chapters Explanatory Variables and Regression and Register Based Survival Data Models The book has been restructured to improve the flow and there are significant updates to the computing in the supporting R package Features Introduction to survival and event history analysis and how to solve problems with incomplete data using Cox regression Parametric proportional hazards models including the Weibull Exponential Extreme Value and Gompertz distributions Parametric accelerated failure time models with the Lognormal Loglogistic Gompertz Exponential Extreme Value and Weibull distributions Proportional hazards models for occurrence exposure data useful with tabular and register based data often with a huge amount of observed events Special treatments of external communal covariates selections from the Lexis diagram and creating period as well as cohort statistics Weir bootstrap sampling suitable for Cox regression with small to medium sized data sets Supported by an R package <https://CRAN.R-project.org/package=eha> including code and data for most examples in the book A dedicated home page for the book at <http://ehar.se/ehar2> This substantial update to this popular book remains an excellent resource for researchers and practitioners of applied event history analysis and survival analysis It can be used as a text for a course for graduate students or for self study **Event History Analysis** Kazuo Yamaguchi, 1991-07-18 In a manner similar to many other titles within the Applied Social Research Methods Series this 182 page book thoroughly covers many of the specific methodological hurdles encountered in implementing event history analysis EHA The Applied Social Research Methods Series is the result of careful

subject selection Consistent with the practical orientation of the book each of the application sections provides useful insights into data structure problems and programming notes Kazuo Yamaguchi s insightful review of problems in structuring EHA models is useful for those contemplating life course research We strongly recommend its inclusion in the libraries of marketing researchers and its inclusion on suggested reading lists of graduate research method seminars Journal of Marketing Research This book which is part of Sage Publications Applied Social Research Methods Series is a practical guide for those interested in using event history analysis The book s strength is that it is well written and easy to understand Even those with limited statistical backgrounds can follow the discussion and the systematic progression from the simpler to the more complex models although the author provides ample references for those wanting a more rigorous discussion Upon finishing the book I found myself wondering about specific accounting questions that might be addressed using event history analysis There are many and in fact most issues can be recast in an events framework In sum I recommend this book to anyone wanting to use event history analysis whether to apply to new research questions or to provide a fresh look at old questions The Accounting Review A significant introduction to the event history literature that provides the background to implement this difficult methodology successfully and that can be supplemented with other more advanced texts It will undoubtedly become a prized text among students and a valuable reference for the research community Contemporary Sociology As a research tool event history analysis has recently become a key technique for researchers professionals and students in a wide range of disciplines However despite this increasing interest few resources exist which clearly examine this technique Now Event History Analysis provides a systematic introduction to models methods and applications of event history analysis Kazuo Yamaguchi emphasizes hands on information including the use and misuse of samples models and covariates in applications the structural arrangement of input data the specification of various models in such computer programs as SAS LOGIST and SPSS LOGLINEAR and the interpretation of parameters estimated from models This timely book also offers such significant topics as missing data hazard rate Cox s partial likelihood model survivor function and discrete time logit models for both one way and two way transitions Event History Analysis is essential for researchers professionals and students of public health sociology labor economics political science and organization studies Provided by published *Survival and Event History Analysis* Odd Aalen, Ornulf Borgan, Hakon Gjessing, 2008-09-16 The aim of this book is to bridge the gap between standard textbook models and a range of models where the dynamic structure of the data manifests itself fully The common denominator of such models is stochastic processes The authors show how counting processes martingales and stochastic integrals fit very nicely with censored data Beginning with standard analyses such as Kaplan Meier plots and Cox regression the presentation progresses to the additive hazard model and recurrent event data Stochastic processes are also used as natural models for individual frailty they allow sensible interpretations of a number of surprising artifacts seen in population data The stochastic process framework is naturally connected to causality The authors

show how dynamic path analyses can incorporate many modern causality ideas in a framework that takes the time aspect seriously To make the material accessible to the reader a large number of practical examples mainly from medicine are developed in detail Stochastic processes are introduced in an intuitive and non technical manner The book is aimed at investigators who use event history methods and want a better understanding of the statistical concepts It is suitable as a textbook for graduate courses in statistics and biostatistics

Event History and Survival Analysis Paul D.

Allison, 2014-02-19 Social scientists are interested in events and their causes Although event histories are ideal for studying the causes of events they typically possess two features censoring and time varying explanatory variables that create major problems for standard statistical procedures Several innovative approaches have been developed to accommodate these two peculiarities of event history data This volume surveys these methods concentrating on the approaches that are most useful to the social sciences In particular Paul D Allison focuses on regression methods in which the occurrence of events is dependent on one or more explanatory variables He gives attention to the statistical models that form the basis of event history analysis and also to practical concerns such as data management cost and useful computer software The Second Edition is part of SAGE's Quantitative Applications in the Social Sciences QASS series which continues to serve countless students instructors and researchers in learning the most cutting edge quantitative techniques

Social Stratification in an Aging Society with Low Fertility Sawako Shirahase, 2022-08-31

This edited book empirically discusses stratification in contemporary Japanese society It is unique for its examination of social inequality in relation to declining fertility and an aging population Japan is the most aged society in the world according to the Statistics Bureau of Japan people who are aged 65 and above comprised 29.1% of the country's total population in 2021 Meanwhile the fertility rate has continuously

declined since the mid 1970s Japan experienced a dramatic change in its demographic structure in a short period of time Such fast change could be a major factor that generated social stratification In her industrialization Japan was thought to share a pattern of social stratification similar to that of developed European and North American countries but with a low degree of socio economic inequality and a high degree of homogeneity There is no clear support for this description of Japan although the country does share a pattern and degree of social stratification similar to that observed in Europe and North America The social stratification theory has been developed in close relationship to the labor market however it is necessary to further examine the social stratification of very aged societies in which a substantial number of the population namely retired persons no longer have any ties to the labor market In this book the contributors explore the pattern of social stratification at three life stages young middle aged and elderly Included are discussions of various aspects of stratification such as education work wealth marriage family gender generation and social attitudes

Massey, Rafael Alarcon, Jorge Durand, Humberto González, 1990-02-07 Return to Aztlan analyzes the social process of international migration through an intensive study of four carefully chosen Mexican communities The book combines historical anthropological and survey data to construct a vivid and comprehensive picture of the social dynamics of contemporary Mexican migration to the United States

The Chicago Guide to Writing about Multivariate Analysis, Second Edition Jane E. Miller, 2013-09-26 Many different people from social scientists to government agencies to business professionals depend on the results of multivariate models to inform their decisions Researchers use these advanced statistical techniques to analyze relationships among multiple variables such as how exercise and weight relate to the risk of heart disease or how unemployment and interest rates affect economic growth Yet despite the widespread need to plainly and effectively explain the results of multivariate analyses to varied audiences few are properly taught this critical skill The Chicago Guide to Writing about Multivariate Analysis is the book researchers turn to when looking for guidance on how to clearly present statistical results and break through the jargon that often clouds writing about applications of statistical analysis This new edition features even more topics and real world examples making it the must have resource for anyone who needs to communicate complex research results For this second edition Jane E Miller includes four new chapters that cover writing about interactions writing about event history analysis writing about multilevel models and the Goldilocks principle for choosing the right size contrast for interpreting results for different variables In addition she has updated or added numerous examples while retaining her clear voice and focus on writers thinking critically about their intended audience and objective Online podcasts templates and an updated study guide will help readers apply skills from the book to their own projects and courses This continues to be the only book that brings together all of the steps involved in communicating findings based on multivariate analysis finding data creating variables estimating statistical models calculating overall effects organizing ideas designing tables and charts and writing prose in a single volume When aligned

with Miller's twelve fundamental principles for quantitative writing this approach will empower readers whether students or experienced researchers to communicate their findings clearly and effectively

Causal Analysis with Event History Data Using Stata Hans-Peter Blossfeld, Götz Rohwer, Gwendolin J. Blossfeld, 2025-07-28 This third edition of Causal Analysis with Event History Data Using Stata provides an updated introduction to event history modeling along with many instructive Stata examples Using the latest Stata software each of these practical examples develops a research question points to useful contextual background information gives a brief account of the underlying statistical concepts describes the organization of input data and the application of Stata statistical procedures and assists the reader in interpreting the content of the results obtained Emphasizing the strengths and limitations of continuous time event history analysis in different fields of social science applications this book demonstrates that event history models provide a useful approach to uncover causal relationships or to map a system of causal relationships In particular this book demonstrates how long term processes can be studied how different forms of duration dependencies can be estimated using nonparametric parametric and semiparametric models and how parallel and interdependent dynamic systems can be analyzed from a causal analytical point of view using the method of episode splitting The book also shows how changing contextual information at the micro meso and macro levels can be easily integrated into a dynamic analysis of longitudinal data Finally the book addresses the problem of unobserved heterogeneity of time constant and time dependent omitted variables and makes suggestions for dealing with these sometimes difficult methodological problems Causal Analysis with Event History Data Using Stata is an invaluable resource for both novice and experienced researchers from a variety of fields e g sociology economics political science education psychology demography epidemiology management research and organizational studies as well as medicine and clinical applications who need an introductory textbook on continuous time event history analysis and who are looking for a practical handbook for their longitudinal research
