Evaluation And Installation Of Surgical Laser Systems:

Evaluation and Installation of Surgical Laser Systems David B. Apfelberg, 2012-12-06 The advent in the 1960s of the unique and exciting new form of energy called laser brought to medicine a marvelous tool that could accomplish new treatments of previously untreatable disorders as well as improved treat ment of mundane problems This brilliant form of light energy is many times more powerful than the energy of the sun yet can be focused microscopically to spot sizes as small as 30 microns Lasers can be directed into seemingly inaccessible areas by mirrors or fiberoptic cables or can be directly applied into sensitive areas such as the retina without damage to intervening structures. There has been a rapid proliferation in the use of lasers in all surgical specialties Starting with bold ideas and experiments of thought leaders in each specialty the application of lasers has evolved into commonplace usage Beginning with the era when laser presentations and publications were an oddity now nearly all specialty areas have whole sections of meetings or journals devoted exclusively to laser usage Laser specialty societies within a specialty have developed and residency training programs routinely instruct trainees in laser techniques Basic science and clinical experimentation has supported laser knowledge Laser usage has also become international Newer wavelengths and accessories have added to the armamentarium of laser usage Despite the rapid growth in laser interest no single source exists to instruct the many new laser users in proper safe and effective use of this Evaluation and Installation of Surgical Laser Systems David B Apfelberg, 1986-12-16 new modality Principles and Practices in Cutaneous Laser Surgery Arielle Kauvar, George Assurance/quality Improvement, Hruza, 2005-09-20 Will full color photographs throughout this reference demonstrates and assesses various technologies and methods to effectively perform laser treatments for a variety of cutaneous disorders emphasizing the selection of the appropriate laser for each clinical situation practical treatment guidelines and the avoidance of complications in the pract

Absten, Stephen N. Joffe, 2013-11-11 In every area of human endeavor technology has opened the door for new advancements to occur Much of the progress in medicine over the last few years is due in large part to new technological tools made available to clinicians and researchers Laser is an expanding technological discipline in medicine that will ultimately contribute to a broad and rapid expansion of both diagnostic and treatment procedures Laser is to light what music is to noise Those physicians who wish to be most successful in the application of this technology to the benefit of their patient will learn of the subtle interactions of light with tissue No technology is good or bad in itself It is only in the choices we make in when and how to apply that technology that it gains its moral value The use of

lasers in medicine has some very definite advantages in the surgical and medical treatment of a variety of disorders At the same time we must all be careful to not perpetrate the myth of lasers in medicine Vastly overstated claims of the value of laser surgery have been held out to the general public resulting in health care being sought on the basis of laser availability
