Floating And Sinking Start Up Science:

Emergent Science Jane Johnston, 2013-12-17 *Emergent Science* is essential reading for anyone involved in supporting scientific learning and development with young children aged between birth and 8. Drawing on theory, the book helps to develop the essential skills needed to understand and support science in this age range. The book is organised into three parts: development contexts and pedagogy; exploring the underpinning theory alongside practical ideas to help trainees, teachers and childcare practitioners to create high quality science experiences for the children they teach. The text includes guidance on developing professional study and research skills to graduate and postgraduate level as well as all the information needed to develop scientific skills, attitudes, understanding and language through concrete social experiences for young children. Features include: Reflective tasks at three levels of professional development: early career student, developing career teacher and later career leader. Case studies that exemplify good practice and practical ideas. Tools for learning explain how science professionals can develop their professional study skills and research skills to Masters level.

Creativity In Primary Science Frost, Jenny, 1997-01-01 How do primary teachers incorporate all the facets of science in their teaching? How do primary teachers plan and replan their science teaching in the light of how children are learning? How do primary teachers retain lively and imaginative science teaching within the constraints of a specified curriculum? This book is about the very best of primary classroom practice in science: six teachers, six schools, six science topics with children from ages five to eleven years. The teaching and children's learning are described in a straightforward style, richly illustrated by pen and ink drawings made from photographs and by examples of children's work. The author has provided a commentary on the particular classroom examples by linking them to a wider discussion of science in primary schools and by sharing the teachers' own rationale for their decisions. The book was written initially for beginning teachers but experienced teachers who reviewed the drafts welcomed the combination of real classroom examples coupled with a more theoretical commentary. Above all, they welcomed the essence of the book, which, as the opening sentence indicates, is about creativity in teaching and a celebration of the skills and expertise of primary teachers in the area of science. The book will be invaluable reading for both trainee and practising primary school teachers.
