Paliwal, 2011-07-15 India's phytodiversity is one of the most significant in the world India is one of the twelve mega biodiversity centers in the world and also an important center of origin of agrobiodiversity It is therefore very important to study document and conserve the plant wealth of India and also of the world before its possible extinction There are convincing scientific economic and sociological reasons for giving priority to the conservation of the major centers of plant diversity throughout the world The strategies to conserve the biodiversity include establishment of protected area network and corridors with emphasis on appropriate levels of management reduction of anthropogenic pressure on natural populations by cultivating them elsewhere programmes of augmentation reintroduction and introduction of target taxa restoration of degraded habitats etc The conservation strategies can be either in situ conservation of genetic resources within their ecosystem and natural habitat or ex situ conservation of components of genetic material of biological diversity outside their natural habitat The choice of conservation strategy depends upon the nature of the material to be conserved i.e. the life cycle and mode of reproduction size of individual population and ecological status Ex situ techniques include the establishment of botanical and zoological gardens banks of pollen seed tissue culture DNA etc Establishment of forest reserves national parks protected areas and on farm conservation of valuable plant varieties is being promoted to facilitate their in situ conservation Medicinal and Aromatic Plants Tariq Aftab, Khalid Rehman Hakeem, 2021-03-27 Before the concept of history began humans undoubtedly acquired life benefits by discovering medicinal and aromatic plants MAPs that were food and medicine Today a variety of available herbs and spices are used and enjoyed throughout the world and continue to promote good health The international market is also quite welcoming for MAPs and essential oils The increasing environment and nature conscious buyers encourage producers to produce high quality essential oils These consumer choices lead to growing preference for organic and herbal based products in the world market As the benefits of medicinal and aromatic plants are recognized these plants will have a special role for humans in the future Until last century the production of botanicals relies to a large degree on wild collection However the increasing commercial collection largely unmonitored trade and habitat loss lead to an incomparably growing pressure on

plant populations in the wild Therefore medicinal and aromatic plants are of high priority for conservation Given the above we bring forth a comprehensive volume Medicinal and Aromatic Plants Healthcare and Industrial Applications highlighting the various healthcare industrial and pharmaceutical applications that are being used on these immensely important MAPs and its future prospects This collection of chapters from the different areas dealing with MAPs caters to the need of all those who are working or have interest in the above topic
