Flowing Through Time Lynn Willoughby, 2012-05-23 This handsome illustrated book chronicles the history of the Lower Chattahoochee River and the people who lived along its banks from prehistoric Indian settlement to the present day In highly accessible energetic prose Lynn Willoughby takes readers down the Lower Chattahoochee River and through the centuries On this journey the author begins by examining the first encounters between Native Americans and European explorers and the international contest for control of the region in the 17th and 19th centuries Throughout the book pays particular attention to the Chattahoochee s crucial role in the economic development of the area In the early to mid nineteenth century the beginning of the age of the steamboat and a period of rapid growth for towns along the river the river was a major waterway for the cotton trade The centrality of the river to commerce is exemplified by the Confederacy s efforts to protect it from Federal forces during the Civil War Once railroads and highways took the place of river travel the economic importance of the river shifted to the building of dams and power plants This subsequently led to the expansion of the textile industry In the last three decades the river has been the focus of environmental concerns and the subject of water wars because of the rapid growth of

A Walk Through Time and Space James Edward Ayers, 2022-07-06. What are we looking for when we buy a book to read? A sigh of time when the body relaxes and the brain still works, an escape to another place and time. Entertainment in any venue, whether it be action, inspirational, educational, dark, light, comedy, how-to, and on and on, different strokes for different folks. This book is different in that it is made up of thirty writings, each piece was written in my own personal style. I have a mailing list of thirty people that have read each piece as it was written and from them, perhaps a hundred more, read each piece. Many of these readers encouraged me to put the pieces into book form and let everyone read them. So here we are. I hope you find this book entertaining and enlightening. Incremental reading at its best. **Macroscale**

Models of Flow Through Highly Heterogeneous Porous Media M. Panfilov, 2013-03-14. The book was planned in such a manner that two basic goals would be reached. On the one hand, the goal was to show some new results in the field of modeling transport through highly heterogeneous media based on the homogenization theory. Multiple new mathematical models of transport are presented herein, studying their properties, developing methods to compute effective parameters of the averaged media, simulation of cell problems using new models to simulate some practical problems. High heterogeneity, being subjected to the homogenization procedure, generates non-local phenomena and then gives a possibility to develop a new non-local or dynamic theory of transport in porous media. Caves and Karst Across Time Yongli Gao, E. Calvin Alexander Jr., 2016-01-28.

Knowledge and understanding of cave and karst systems have evolved dramatically since the creation of the Geological Society of America in 1888. This book, which came out of a session during GSA's 2013 Annual Meeting, highlights the changes

in the study and application of cave and karst systems since GSA's origin while looking ahead to future advancements

Personalized Analysis of Left Atrial Blood Flow through Computational Modeling Sophia Bäck, 2025-04-02 In this thesis the atrial blood flow was modeled using computational fluid dynamics CFD to better understand atrial hemodynamics and blood stasis. Atrial hemodynamics and especially stasis are of interest since thrombi can form in the left atrium travel with the blood stream to the brain and cause strokes. To model atrial blood flow in a personalized manner several modeling assumptions and choices need to be made for example how to model the motion of the atrial wall. There are different approaches to estimate stasis however there is no standard method. While it is known that in patients with atrial fibrillation AF the stroke risk is increased the exact mechanisms for this are not fully understood especially in patients that are in sinus rhythm most of the time. One approach to reduce the stroke risk is to occlude the left atrial appendage LAA. However this has not been evaluated for patients in an early phase of AF. The aim of this thesis was to enhance our understanding of left atrial hemodynamics. For this the blood flow in the left atrium was simulated using CFD based on time resolved CT images including the patient specific geometry and wall motion. In this thesis different stasis markers are investigated and a new method to quantify atrial hemodynamics was developed splitting the atrial blood flow into 6 components. Additionally virtual LAA occlusion was investigated to see how it impacts atrial hemodynamics during sinus rhythm. In this thesis the atrial blood flow and stasis in 21 paroxysmal AF patients during sinus rhythm were compared to 8 controls. The wall motion tracked from time resolved CT that was used in the CFD simulations showed similar flow rates as measurements from 4D flow MRI. All stasis markers investigated showed higher stasis in AF patients during sinus rhythm compared to the controls. Atrial flow component analysis revealed how blood travels through the left atrium. In the control group the blood flow was dominated by components characterizing a direct path through the LA. In the patients with AF however an increased amount of blood stays in the LA for more than two heart beats and more blood flows back to the lungs. Virtual LAAO showed a reduction of stasis for some individuals to similar levels as the control group. For others stasis was reduced but still high and stasis was located close to the occlusion device. This could indicate an increased risk for device related thrombi. In conclusion this thesis contributes to our understanding of the atrial blood flow. Using CT based CFD simulations we could show that stasis is increased in AF patients during sinus rhythm. In the future adding patient specific stasis assessment could improve decision making to prescribe anticoagulants and thus reduce the incidence of cardioembolic strokes.
