British Women Travellers in the Long Nineteenth Century Marilyn D. Button, Jessica A. Sheetz-Nguyen, 2025-03-05 During the long nineteenth century British women reframed the masculine paradigm of the Grand Tour They created a feminist travel gaze intentionally or unintentionally that differed from that of male peers Unlike their brothers who went for personal edification women with means left their English homes for the great Italian cities of Florence Naples and Rome to escape personal disappointments and the social limitations imposed by parents spouses and society The anonymity of travel to a distant land and new freedoms fostered political and creative achievements including entrepreneurial journalism literary masterpieces and social advocacy for their gender which redefined the contours of the Anglo-Italian cultural landscape The historical evidence presented here testifies to the life-changing capacity of travel and firmly demonstrates how British women's history and literature enriches and broadens narratives about Britain and the World

Masters of Mathematics Robert A. Nowlan, 2017-05-13 The original title for this work was *Mathematical Literacy: What Is It and Why You Need It* The current title reflects that there can be no real learning in any subject unless questions of who what when where why and how are raised in the minds of the learners The book is not a mathematical text and there are no assigned exercises or exams It is written for reasonably intelligent and curious individuals both those who value mathematics aware of its many important applications and others who have been inappropriately exposed to mathematics leading to indifference to the subject fear and even loathing These feelings are all consequences of meaningless presentations drill rote learning and being lost as the purpose of what is being studied Mathematics education needs a radical reform There is more than one way to accomplish this Here the author presents his approach of wrapping mathematical ideas in a story To learn one first must develop an interest in a problem and the curiosity to find how masters of mathematics have solved them What is necessary to be mathematically literate It's not about solving algebraic equations or even making a geometric proof These are valuable skills but not evidence of literacy We often seek answers but learning to ask pertinent questions is the road to mathematical literacy Here is the good news new mathematical ideas have a way of finding applications This is known as the unreasonable effectiveness of mathematics
