Rapid and On-Line Instrumentation for Food Quality Assurance I Tothill, 2003-08-31 Many measurements of product and process characteristics have traditionally been off line involving removing the product and taking it to a quality control laboratory for analysis over a period of hours or even days However the development of faster more automated methods of production and the shift to more proactive quality and safety management systems such as HACCP has forced the food industry to look for more rapid methods with the potential for continuous real time measurement of products and processes With its distinguished editor and international team of contributors this important collection summarises key developments in this growing field Part one reviews the emergence of new methods for analysing food safety It includes chapters on the detection of foreign bodies other contaminants such as toxins pesticides dioxins and veterinary residues and rapid methods for detecting pathogenic and spoilage bacteria Part two discusses the measurement of product quality There are chapters on analysing ingredients such as additives and micronutrients genetically modified organisms and added water A number of chapters discuss methods for analysing food composition and the use of electronic noses to monitor food quality A final chapter reviews ways of integrating such measurements into effective process control Rapid and on line instrumentation for food quality assurance provides a benchmark of good practice in this important field and will be a valuable reference for the food industry Summarises key developments in the growing field of food quality assurance focussing on rapid and on line instrumentation Includes chapters on the detection of foreign bodies pathogenic and spoilage bacteria and other contaminants such as toxins pesticides dioxins
