**Ancistrocladus Naphthylisoquinoline Alkaloids** A. Douglas Kinghorn, Heinz Falk, Simon Gibbons, Yoshinori Asakawa, Ji-Kai Liu, Verena M Dirsch, 2023-01-01 This book describes a unique class of secondary metabolites the mono and dimeric naphthylisoquinoline alkaloids They exclusively occur in lianas of the palaeotropical Ancistrocladaceae and Dioncophyllaceae plant families Their unprecedented structures include stereogenic centers and rotationally hindered and therefore stereogenic axes Extended recent investigations on six Ancistrocladus species from Asia as reported in this contribution shed light on their fascinating phytochemical productivity with over 100 intriguing natural products This high chemodiversity arises from a similarly unique biosynthesis from acetate malonate units following a novel polyketidic pathway to plant derived isoquinoline alkaloids Some of the compounds show most promising anti parasitic activities Additionally strategies for the regio and stereoselective total synthesis of the alkaloids including the directed construction of the chiral axis are also presented

**Dipterocarp Biology, Ecology, and Conservation** Jaboury Ghazoul, 2016-08-25 Asian tropical forests are amongst the most diverse on the planet a richness that belies the fact that they are dominated by a single family of trees the Dipterocarpaceae Many other families contribute to Asia s natural diversity but few compare to the dipterocarps in terms of the number and variety of species that occupy the forest canopy Understanding the ecology and dynamics of Asian forests is therefore to a large extent a study of the Dipterocarpaceae This book synthesises our current knowledge concerning dipterocarps exploring the family through taxonomic evolutionary and biogeographic perspectives Dipterocarp Biology Ecology and Conservation describes the rich variety of dipterocarp forest formations in both the ever wet and seasonal tropics including the less well known African and South American species Detailed coverage of dipterocarp reproductive ecology and population genetics reflects the considerable research devoted to this subject and its particular importance in shaping the ecology of Asian lowland rain forests Ecophysiological responses to light water and nutrients which underlie mechanisms that maintain dipterocarp species richness are also addressed At broader scales dipterocarp responses to variation in soil topography climate and natural disturbance regimes are explored from both population and community perspectives The book concludes with a consideration of the crucial economic values of dipterocarps and their

extensive exploitation discussing future opportunities for conservation and restoration This will be a useful resource for senior undergraduate and graduate courses in tropical forest ecology and management as well as professional researchers in tropical plant ecology forestry geography and conservation biology
