Consuming Youth Robert Latham, 2007-11-01 From the novels of Anne Rice to The Lost Boys from The Terminator to cyberpunk science fiction vampires and cyborgs have become strikingly visible figures within American popular culture especially youth culture In Consuming Youth Rob Latham explains why showing how fiction film and other media deploy these ambiguous monsters to embody and work through the implications of a capitalist system in which youth both consume and are consumed Inspired by Marx s use of the cyborg vampire as a metaphor for the objectification of physical labor in the factory Latham shows how contemporary images of vampires and cyborgs illuminate the contradictory processes of empowerment and exploitation that characterize the youth consumer system While the vampire is a voracious consumer driven by a hunger for perpetual youth the cyborg has incorporated the machineries of consumption into its own flesh Powerful fusions of technology and desire

these paired images symbolize the forms of labor and leisure that American society has staked out for contemporary youth A startling look at youth in our time Consuming Youth will interest anyone concerned with film television and popular culture

Personal Medical Information Ross Anderson,2012-12-06 In the last few years the protection of computerised medical records and of other personal health information has become the subject of both technical research and political dispute in a number of countries In Britain the issue arose initially as an argument between the British Medical Association and the Department of Health over whether encryption should be used in a new medical network In Germany the focus was the issue to all patients of a smartcard to hold insurance details and facilitate payment while in the USA the debate has been whether federal law should preempt state regulation of

computerised medical records and if so what technical and legal protection should be afforded the patient Whatever the origin and evolution of this debate in specific countries it has become clear that policy and technical matters are closely intertwined What does computer security mean in the medical context What are we trying to do What are the threats that we are trying to forestall What costs might reasonably be incurred To what extent is the existing technology largely developed to meet military and banking requirements of use And perhaps hardest of all what is the right balance between technical and legal controls As the debate spread it became clear that there was little serious contact between the people who could state the requirements clinical professionals medical ethicists and patients and the people who could explore how to meet
