Essays on the Nature of Commerce in General Richard Cantillon, Richard Cantillon is one of the key figures in the early history of economics He was certainly not the first to think about economic problems but he was the first to have clear insight into the way the economy functions as a system He was arguably the first to structure a theory of how the economy works In this sense he could be called the first real economist Today his ideas on population determination of prices wages and interest the role of the entrepreneur banking and the influence of money supply on the economy are increasingly quoted and appreciated This is a translation of the *essai sur la nature du commerce en general* his only surviving work It was circulated in manuscript form for many years after his death and was extremely influential albeit not well known at least throughout the eighteenth century **Essays on the Nature of Commerce in General** shaped the development of economics through its formative influence

on François Quesnay and Adam Smith. It is a cornerstone upon which all subsequent economic theory has been built. Transaction is proud to breathe new life into this classic work as part of its distinguished series in economic theory and history. In his new introduction, Anthony Brewer showcases Cantillon, the prophetic thinker, for a new generation of readers. This volume's broad-based appeal and great cultural import can no longer afford to be overlooked. Students of economic theory, intellectual historians, and sociologists will find this volume indispensable.

Richard Cantillon 1680-1734 Little is known about Cantillon except that he was Irish and turned briefly from a successful banking career, mainly in France, to write one of the most outstanding works in the history of the subject.

Essai Anthony A. Brewer is professor of the history of economics at the University of Bristol. He is on the editorial advisory board of the scholarly journal *History of Political Economy* and has held visiting posts at Duke University and Chuo University, Tokyo. He is the author of *Richard Cantillon: Pioneer of Economic Theory*, *Marxist Theories of Imperialism: A Critical Survey*, and *A Guide to Marx's Capital*.

Essays on Art and Language Charles Harrison, 2003-09-12

Critical and theoretical essays by a long-time participant in the Art Language movement. These essays by art historian and critic Charles Harrison are based on the premise that making art and talking about art are related enterprises. They are written from the point of view of Art Language, the artistic movement based in England and briefly in the United States with which Harrison has been associated for thirty years. Harrison uses the work of Art Language as a central case study to discuss developments in art from the 1950s through the 1980s. According to Harrison, the strongest motivation for writing about art is that it brings us closer to that which is other than ourselves. In seeing how a work is done, we learn about its achieved identity; we see, for example, that a drip on a Pollock is integral to its technical character, whereas a drip on a Mondrian would not be. Throughout the book, Harrison uses specific examples to address a range of questions about the history, theory, and making of modern art; questions about the conditions of its making and the nature of its public; about the problems and priorities of criticism; and about the relations between interpretation and judgment.

An Essay on the Nature and Significance of Economic Science Lionel Robbins, 2007. This book by Lionel Robbins first appeared in 1932 as an outstanding English language statement of the Misesian view of economic method, namely that economics is a social science and must advance its propositions by means of deductive reasoning and not through the methods used in the natural sciences. The case is argued here with patience and attention to scholarly details. The unfortunate second edition of this book, which is

more available today introduces confusions by departing from Austrian microeconomic theory Thus does the Mises Institute celebrate the 75th anniversary of the first edition with this reprint Reading Robbins writes Samuel Bostaph of the University of Dallas is an excellent way of contrasting his explanation of the basic nature of economics with that of the Austrian School as found in the work of Mises as an extension of Carl Mengers s foundations Such a reading wonderfully clarifies one s understanding of the basic conception of economics as a science of human action rather than one of mere economizing

Nature, Aesthetics, and Environmentalism Allen Carlson, Sheila Lintott, 2008 *Nature Aesthetics and Environmentalism From Beauty to Duty* addresses the complex relationships between aesthetic appreciation and environmental issues and emphasizes the valuable contribution that environmental aesthetics can make to environmentalism Allen Carlson a pioneer in environmental aesthetics and Sheila Lintott who has published widely in aesthetics combine important historical essays on the appreciation of nature with the best contemporary research in the field They begin with the scientific artistic and aesthetic foundations of current environmental beliefs and attitudes Then they offer views on the conceptualization of nature and the various debates on how to properly and respectfully appreciate nature The book introduces positive aesthetics the belief that everything in nature is essentially beautiful even the devastation caused by earthquakes or floods and the essays in the final section explicitly bring together aesthetics ethics and environmentalism to explore the ways in which each might affect the others Book jacket

The Imaginary Museum of Musical Works : An Essay in the Philosophy of Music Lydia Goehr, 1992-03-26 What is the difference between a performance of Beethoven s Fifth Symphony and the symphony itself What does it mean for musicians to be faithful to the works they perform To answer such questions Lydia Goehr combines philosophical and historical methods of enquiry Finding Anglo American philosophy inadequate for the task she shows that a historical perspective is indispensable to a full understanding of musical ontology Goehr examines the concepts and assumptions behind the practice of classical music in the nineteenth century and demonstrates how different they were from those of previous centuries She rejects the finding that the concept of a musical work emerged in the sixteenth century placing its emergence instead around 1800 She describes how the concept of a work then came to define the norms expectations and behaviour that we now associate with classical music Out of the historical thesis Goehr draws philosophical conclusions about the normative functions of concepts and ideals She also addresses current debates among conductors early music performers and avant gardists
