René Descartes's Natural Philosophy and Particular Bodies Fabrizio Baldassarri, 2024-01-01 This book explores René Descartes s attempts to describe particular bodies such as rocks minerals metals plants and animals within the mechanistic interpretation of nature of his philosophical program Despite his early rationalistic epistemology Descartes s increasing attention to collections histories lists of qualities and particular bodies results in a puzzling short history of all natural phenomena contained in the Principles of philosophy 1644 The present book outlines the role of Descartes s observations and experimentation as he aimed to construct a universal science of nature ultimately revealing the mechanization of nature in detail and for curious bodies such as the Bologna Stone or the sensitive herb What results is a theoretical natural history consistent with the mechanical principles of his philosophy ultimately shedding new light on his attempt to produce a complete philosophy of nature

The Science of Nature in the Seventeenth Century Peter R. Anstey, John A. Schuster, 2006-06-28 One of the hallmarks of the modern world has been the stunning rise of the natural sciences The exponential expansion of scientific knowledge and the accompanying technology that so impact on our daily lives are truly remarkable But what is often taken for granted is the enviable epistemic credit rating of scientific knowledge science is authoritative science inspires confidence science is right Yet it has not always been so In the seventeenth century the situation was markedly different competing sources of authority shifting disciplinary boundaries emerging modes of experimental practice and methodological reflection were some of the constituents in a quite different m lange in which knowledge of nature was by no means p eminent It was the desire to probe the underlying causes of the shift from the early modern nature knowledge to modern science that was one of the stimuli for the Origins of Modernity Early Modern Thought 1543 1789 conference held in Sydney in July 2002 How and why did modern science emerge from its early modern roots to the dominant position which it enjoys in today s post modern world Under the auspices

of the International Society for Intellectual History The University of New South Wales and The University of Sydney a group of historians and philosophers of science gathered to discuss this issue However it soon became clear that a prior question needed to be settled first the question as to the precise nature of the quest for knowledge of the natural realm in the seventeenth century **Journal of Early Modern Studies, Volume 10, issue 1 (Spring 2021)** Vlad ALEXANDRESCU, Sorana CORNEANU, ARTICLES Patrick BRISSEY Reasons for the Method in Descartes Discours Abstract In the practical philosophy of the Discours de la Methode before the theoretical metaphysics of Part Four and the Meditationes Descartes gives us an inductive argument that his method the procedure and cognitive psychology is veracious at its inception His evidence akin to his Scholastic predecessors is God a maximally perfect being established an ontological foundation for knowledge such that reason and nature are isomorphic Further the method he tells us is a functional definition of human reason that is like other rationalists during this period he holds the structure of reason maps onto the world The evidence for this thesis is given in what I call the groundwork to Descartes philosophical system essentially the first half of the Discours where through a series of examples in the preamble of Part Two he step by step ascends from the perfection of artifacts through the imposition of reason the Architect Example to the perfection of a constituent s use of her cognitive faculties the Wise Lawgiver Example to God perfecting and ordering reality the Divine Artificer Example Finally he descends establishing the structure of human reason which undergirds and entails the procedure of the method the Laws of Sparta Example Hanoch BEN YAMI Word Sign and Representation in Descartes Abstract In the first chapter of his The World Descartes compares light to words and discusses signs and ideas This made scholars read into that passage our views of language as a representational medium and consider it Descartes model for representation in perception I show by contrast that Descartes does not ascribe there any representational role to language that to be a sign is for him to have a kind of causal role and that he is concerned there only with the cause s lack of resemblance to its effect not with the representation s lack of resemblance to what it represents I support this interpretation by comparisons with other places in Descartes corpus and with earlier authors Descartes likely sources This interpretation may shed light both on Descartes understanding of the functioning of language and on the development of his theory of representation in perception Osvaldo OTTAVIANI The Young Leibniz and the Ontological Argument from Rejection to Reconsideration Abstract Leibniz considered the Cartesian version of the ontological argument not as an inconsistent proof but only as an incomplete one it requires a preliminary proof of possibility to show that the concept of the most perfect being involves no contradiction Leibniz raised this objection to Descartes s proof already in 1676 then repeated it throughout his entire life Before 1676 however he suggested a more substantial objection to the Cartesian argument I take into account a text written around 1671 72 in which Leibniz considers the Cartesian proof as a paralogism and a petition of principle I argue that this criticism is modelled on Gassendi s objections to the Cartesian proof and that Leibniz s early rejection of the ontological argument has to be understood in the general

context of his early philosophy which was inspired by nominalist authors such as Hobbes and Gassendi Then I take into account the reconsideration of the ontological argument in a series of texts of 1678 showing how Leibniz implicitly replies to the kind of criticism to the argument he himself shared in his earlier works

Joseph ANDERSON The Necessity of Leibniz Rejection of Necessitarianism Abstract In the Theodicy Leibniz defends the justice of God from two impious conceptions of God a God who makes arbitrary choices and a God who doesn t make choices at all Many interpret Leibniz as navigating these dangers by positing a kind of non Spinozistic necessitarianism I examine passages from the Theodicy which reject not only blind Spinozistic necessitarianism but necessitarianism altogether Leibniz thinks blind necessitarianism is dangerous due to the conception of God it entails and the implications for morality Non Spinozistic necessitarianism avoids many of these criticisms Leibniz finds that even necessary actions should receive certain rewards and punishments as long as they necessarily lead to a change in future behavior But Leibniz rejects even non Spinozistic necessitarianism on the grounds that it is inconsistent with punitive justice Whether Leibniz successfully avoids necessitarianism it ought to be clear that he sees his own position as significantly distinct from necessitarianism and not just Spinozism

Descartes's Mathematical Thought C. Sasaki, 2013-03-09 Covering both the history of mathematics and of philosophy Descartes s Mathematical Thought reconstructs the intellectual career of Descartes most comprehensively and originally in a global perspective including the history of early modern China and Japan Especially it shows what the concept of mathesis universalis meant before and during the period of Descartes and how it influenced the young Descartes In fact it was the most fundamental mathematical discipline during the seventeenth century and for Descartes a key notion which may have led to his novel mathematics of algebraic analysis

Philosophies of Technology: Francis Bacon and his Contemporaries (2 vols.), 2008-10-31 The essays in the present volume attempt to historically reconstruct the various dependencies of philosophical and scientific knowledge of the material and technical culture of the early modern era and to draw systematic conclusions for the writing of early modern history of science The divisive transformation of humanist scholarly culture the Scholastic school philosophy as well as magic in the form of a philosophy of practice is always associated with the work of Francis Bacon All of these essays in this volume reflect the close interaction between technical models and knowledge production in natural philosophy natural history and epistemology It becomes clear that the technological developments of the early modern era cannot be adequately depicted in the form of a pure history of technology but rather only as part of a broader cultural history of the sciences Contributors include Todd Andrew Borlik Arianna Borrelli Thomas Brandstetter Daniel Damler Luisa Dolza Moritz Epple Berthold

Heinecke Dana Jalobeanu J rgen Klein Staffan M ller Wille Romano Nanni Jarmo Pulkkinen Pablo Schneider Andr s Vaccari Benjamin Wardhaugh Sophie Weeks and Claus Zittel **Burchard de Volder and the Age of the Scientific Revolution** Andrea Strazzoni, 2019-11-18 This monograph details the entire scientific thought of an influential natural philosopher whose contributions unfortunately have become obscured by the pages of history Readers will discover an important thinker Burchard de Volder He was instrumental in founding the first experimental cabinet at a European University in 1675 The author goes beyond the familiar image of De Volder as a forerunner of Newtonianism in Continental Europe He consults neglected materials including handwritten sources and takes into account new historiographical categories His investigation maps the thought of an author who did not sit with an univocal philosophical school but critically dealt with all the major philosophers and scientists of his age from Descartes to Newton via Spinoza Boyle Huygens Bernoulli and Leibniz It explores the way De Volder s un systematic thought used rejected and re shaped their theories and approaches In addition the title includes transcriptions of De Volder s teaching materials disputations dictations and notes Insightful analysis combined with a trove of primary source material will help readers gain a new perspective on a thinker so far mostly ignored by scholars They will find a thoughtful figure who engaged with early modern science and developed a place that fostered experimental philosophy In the Shadow of Descartes G.H. Von Wright, 2013-03-09 Descartes made a sharp distinction between matter and mind But he also thought that the two interact with one another Is such interaction possible however without either a

materialist reduction of mind to matter or an idealist phenomenalist reduction of matter to mind These questions overshadow the Western tradition in metaphysics from the time of Descartes to present times The book makes an effort to stay clear of reductivist views of the two Cartesian substances It defends a dualistic psycho physical parallel theory which reconciles freedom of action with determinism in nature Basic problems in perception theory are also discussed with special emphasis on hearing and sound Because of the intrinsic interest of the subject and the author s non technical presentation of it the

book should appeal to all readers with a serious interest in philosophy and psychology **Mathematizing Space** Vincenzo De Risi, 2015-01-31 This book collects the papers of the conference held in Berlin Germany 27-29 August 2012 on Space Geometry and the Imagination from Antiquity to the Modern Age The conference was a joint effort by the Max Planck Institute for the History of Science Berlin and the Centro di Ricerca Matematica Ennio De Giorgi Pisa **Newton and Empiricism** Zvi Biener, Eric Schliesser, 2014-05-16 This volume of original papers by a leading team of international scholars explores Isaac Newton's relation to a variety of empiricisms and empiricists It includes studies of Newton's experimental methods in optics and their roots in Bacon and Boyle Locke's and Hume's responses to Newton on the nature of matter time the structure of the sciences and the limits of human inquiry In addition it explores the use of Newtonian ideas in 18th century pedagogy and the life sciences Finally it breaks new ground in analyzing the method of evidential reasoning heralded by the Principia its nature strength and development in the subsequent three centuries of gravitational research The volume will be of interest to historians of science and philosophy and philosophers interested in the nature of empiricism **Icons of Unbelief** S. T. Cartesian Psychophysics and the Whole Nature of Man Richard F. Hassing, 2015-11-19 In *The Passions of the Soul* Descartes proclaims his intention to explain the passions only as a Physicist and titles Part I About the passions in general and incidentally about the whole nature of man not an incidental item Two questions orient the present inquiry What does Descartes mean by the whole nature of man and how does a general theory of the human emotions based on his physics account for it Not surprisingly Descartes does not fulfill the letter of his intention rather he explains the passions only partly as a Physicist The other part of his study irreducible to any physics consists in his own analysis of the life of the human being

as union of soul and body The resulting account is an unusual combination of scientific hypothetico deductive psychophysics and prescientific insight into human experience In it a quasi mechanical theory of the impact of imagination on passion and volition is combined with a distinctive emphasis on the human propensity to esteem what we imagine to be great Human history and therewith the whole problematic nature of man is constituted in significant measure by the particular and variable objects of esteem The correction and improvement of our nature is the aim of Descartes s culminating doctrine of the one thing that is truly estimable the firm and constant resolution to use well autonomously one s own individual powers of cognition and volition With the return of religious war The Passions of the Soul is newly relevant Descartes's Dreams

Ann Scholl,2005 Ann Scholl revises the traditional understanding of the role of imagination and sensory perception in Descartes s Meditations Traditionally Cartesian scholars have focused primarily on sensory perception as the more significant of the two special modes of thought In this work Ann Scholl describes how a better understanding of Descartes s skepticism and his arguments for dualism are reached when imagination instead is understood as the more primary of the two special modes of thought The result is a fresh reading and interpretation of Descartes s most influential work
