The Fundamentals of Corrosion and Scaling for Petroleum & Environmental Engineers George V Chilingar, Ryan Mourhatch, Ghazi D Al-Qahtani, 2013-11-25 Scale or deposits can build up in the wellbore tubulars and other downhole components causing considerable damage to the life of the well Infrastructure provides the support for the wells system and with oil and gas consumption on the rise and transportation required to feed that demand all petroleum and pipeline engineers must have accurate corrosion and scaling information The Fundamentals of Corrosion and Scaling for Petroleum and Environmental Engineers will provide the quick knowledge that engineers need to not only enhance the reliability of corrosion and scale control technologies but also manage scale deposits prevent fatigue and ensure equipment integrity

Electrochemistry for Corrosion Fundamentals Toshiaki Ohtsuka, Atsushi Nishikata, Masatoshi Sakairi, Koji Fushimi, 2017-10-27 This brief is concerned with the fundamentals of corrosion of metallic materials and electrochemistry for better understanding of corrosion phenomena Corrosion is related to both the environment and material properties induced by electrochemical reactions at the interface between metallic materials and the environment as in aqueous and gaseous phases In order to understand corrosion phenomena knowledge of electrochemistry is thus required and to investigate the cause of corrosion damage appropriate electrochemical experiments must be performed Corrosion scientists should therefore possess knowledge of both electrochemistry and its related experimental techniques In this book corrosion phenomena are introduced from the electrochemical aspect Electrochemical techniques for the study of corrosion are then described with other techniques that can be combined with electrochemistry Because this brief is characterized as starting with the fundamentals of corrosion and electrochemistry it is accessible to undergraduate students as well as to graduate students who are beginning corrosion research

Corrosion and its Mitigation Ajay K. Singh, 2020-09-24 This brief covers case studies on Microbial Induced Corrosion MIC and its mitigation After reviewing the basics of corrosion it focuses on MIC MIC is a special type of electrochemical corrosion in which the presence of microbes and bacteria alters the chemistry of liquid media so as to make them more corrosive These changes are harmful to metallic equipment processing machinery marine vessels etc in an environment that is host to a wealth of microorganisms A 2007 US survey estimated corrosion related damages to cost 276 billion a year roughly 50% of which are due to MIC The industries most affected by MIC are power production oil exploration transportation and storage water distribution and more generally all industries involving marine environments However means for effectively preventing and controlling MIC are poorly understood As such the book's later chapters address various mechanisms processes that show promise with regard to MIC mitigation Lastly the book discusses the strategies currently being explored to mitigate MIC using green technologies **Fundamentals of Metallic Corrosion** Philip A. Schweitzer, P.E., 2006-12-22

Understanding corrosion is essential for selecting and maintaining equipment and structural components that will withstand environmental and process conditions effectively Fundamentals of Metallic Corrosion Atmospheric and Media Corrosion of Metals focuses on the mechanisms of corrosion as well as the action of various corrodents on metals and th Springer Handbook of Metrology and Testing Horst Czichos, Tetsuya Saito, Leslie E. Smith, 2011-07-22 This Springer Handbook of

Metrology and Testing presents the principles of Metrology the science of measurement and the methods and techniques of Testing determining the characteristics of a given product as they apply to chemical and microstructural analysis and to the measurement and testing of materials properties and performance including modelling and simulation The principal motivation for this Handbook stems from the increasing demands of technology for measurement results that can be used globally Measurements within a local laboratory or manufacturing facility must be able to be reproduced accurately anywhere in the world The book integrates knowledge from basic sciences and engineering disciplines compiled by experts from internationally known metrology and testing institutions and academe as well as from industry and conformity assessment and accreditation bodies The Commission of the European Union has expressed this as there is no science without measurements no quality without testing and no global markets without standards
