*Fundamentals of Hot Wire Anemometry* Charles G. Lomas, 2011-06-09 This 1985 book provides a summary of the theory and practice of the hot wire anemometer an instrument used to measure the speed of fluid flow Many techniques and uses of this instrument are discussed in detail The author considers such topics as probe fouling probe design and circuit design as well as the thermodynamics of heated wires and thin films He also discusses measurements of turbulence shear flows vorticity temperature combined temperature and velocity two phase flows and compressible flows for measurements in air water mercury blood glycerine oil luminous gases and polymer solutions The book concludes with a section on the pulsed wire anemometer and other wake sensing anemometers This book assumes a familiarity with basic fluid mechanics However mathematical descriptions occur near the end of each chapter thus allowing those with a limited mathematical background to make use of the practical details at the beginning of each chapter

*Three-Dimensional Velocity and Vorticity Measuring and Image Analysis Techniques* Th. Dracos, 2013-06-29 The contents of this volume reflect to a large extent the efforts made by a group of Institutes at the ETH Z rich to develop new techniques for measurements of flows in fluids in the last decade The motivation came from the study of transport and mixing processes in natural and industrial systems One of the characteristic properties of turbulence is its high mixing efficiency The techniques developed are therefore suitable although not exclusively for turbulence measurements They can be subdivided into point measurements and field measurements The aim of the point measurements developed is to determine the three components of the velocity and all their first derivatives with good temporal resolution and accuracy in turbulent flows The old and well established method of hot wire anemometry was used for this purpose One of the main achievements in this context is the construction of miniature multi wire probes This technique was introduced to the Institute of Hydromechanics and Water Resources Management of ETH Z rich by Profs A Tsinober and E Kit from Tel Aviv University This was made possible by the

generous financial support by ETH for which I would like to express my gratitude on this occasion In addition Dr F E Joergensen from DANTEC contributed an example of recent developments in the hardware of Constant Temperature Anemometry CTA for which I am very thankful
