LHRH and Its Analogs B.H. Vickery, J.J. Nestor, 2012-12-06 Since the discovery of LHRH in 1971 research into the physiology and therapeutics of this compound can be divided into three distinctly different phases. In the first phase attention was paid chiefly to the natural sequence hormone; efforts were channeled to explore its diagnostic use and nearly all the clinical investigations were coordinated by a single pharmaceutical company. The successes in this area were quite limited and the interest in the promise of this agent as a diagnostic test has long since waned. This phase of research consumed roughly the first seven years of clinical testing after the isolation and characterization of the compound by the two groups involved in the Nobel effort. With the appearance of long acting LHRH agonists the second phase of research on LHRH began in the late 70s. LHRH agonists were the only compounds available during this period of research and paradoxical desensitization was the predominant therapeutic basis for the discoveries. An ever widening number of therapeutic applications using this approach were unearthed. A second theme which emerged during this second 5-7 year period was that the pulsatile administration of the natural sequence LHRH could be used to treat LHRH deficiency in men and women. **The Journal of the American Board of Family Practice**, 1991 **Population Sciences**, 1977-07

Advances in Assisted Reproductive Technologies Z. BenRafael, Neri Laufer, Shlomo Mashiach, Joseph G. Schenker, 2012-12-06 The World Congress of In Vitro Fertilization and Alternate Assisted Reproduction held in Jerusalem Israel 2-7 April 1989 was the sixth in the sequence of these Congresses but was the first to emphasize the major importance and the place of assisted reproductive technologies in the treatment of infertility. The eternal City of Jerusalem witnessed the gathering of more than 1500 participants from all over the world who shared and exchanged knowledge and up to date experience in this ever evolving field. The high quality scientific contributions to the Congress culminated in the publication of this Proceedings. It embraces all important aspects in the field of in vitro fertilization and alternate assisted reproduction. Papers on controversies and diversities of methods to stimulate the ovaries, imaging techniques, basic research and state of the art papers on ovarian physiology, the role of GnRH and its analog, clinical aspects of IVF treatment and cryopreservation, up to date techniques in assisted reproductive technologies that are quickly developing in conjunction with IVF were included. When should IVF be preferable to surgery? What are the expected up to date world results and what are the psychological, moral, ethical and religious implications? These are all the concerns of the treating team and are addressed here. Male factor infertility remains a frustrating problem but advances in the understanding of sperm-egg interaction, sperm evaluation and preparation are reported. Micromanipulation emerges as a possible alternative to bring some relief to this problem but it also promises to be central in promoting the field of prenatal genetic analysis. **Sperm Measures and**
