**Escape on Venus** Edgar Rice Burroughs,1941 Escape on Venus - Publishing People Series Edgar Rice Burroughs,2020-10-16 IF YOU will look at any good map of Venus you will see that the land mass called Anlap lies northwest of the island of Vepaja from which Duare and I had just escaped On Anlap lies Korva the friendly country toward which I pointed the nose of our plane Of course there is no good map of Venus at least none that I ever have seen because the scientists of the southern hemisphere of the planet the hemisphere to which Chance carried my rocket ship have an erroneous conception of the shape of their world They believe that Amtor as they call it is shaped like a saucer and floats upon a sea of molten rock This seems quite evident to them for how else might the spewing of lava from the craters of volcanoes be explained They also believe that Karbol Cold Country lies at the periphery of their saucer whereas it is as a matter of fact the Antarctic region surrounding the south pole of Venus You may readily perceive how this distorts their conception of actual conditions and is reflected in maps which are to say the least weird Where actually the parallels of longitude converge toward the pole their conception would be that they converged toward the Equator or the center of their saucer and that they were farthest apart at the periphery of the saucer

All magnetized planets in our solar system Mercury Earth Jupiter Saturn Uranus and Neptune interact strongly with the solar wind and possess well developed magnetotails It is not only the strongly magnetized planets that have magnetotails Mars and Venus have no global intrinsic magnetic field yet they possess induced magnetotails Comets have magnetotails that are

formed by the draping of the interplanetary magnetic field In the case of planetary satellites moons the magnetotail refers to the wake region behind the satellite in the flow of either the solar wind or the magnetosphere of its parent planet The largest magnetotail of all in our solar system is the heliotail the magnetotail of the heliosphere The variety of solar wind conditions planetary rotation rates ionospheric conductivity and physical dimensions provide an outstanding opportunity to extend our understanding of the influence of these factors on magnetotail processes and structures Volume highlights include Discussion on why a magnetotail is a fundamental problem of magnetospheric physics Unique collection of tutorials on a large range of magnetotails in our solar system In depth reviews comparing magnetotail processes at Earth with other magnetotail structures found throughout the heliosphere Collectively Magnetotails in the Solar System brings together for the first time in one book a collection of tutorials and current developments addressing different types of magnetotails As a result this book should appeal to a broad community of space scientists and it should also be of interest to astronomers who are looking at tail like structures beyond our solar system

Nagy, A. Balogh, Thomas E. Cravens, Michael Mendillo, Ingo Müller-Wodarg, 2008-12-31 Andrew F Nagy Originally published in the journal Space Science Reviews Volume 139 Nos 1-4 DOI 10.1007/s11214-008-9353-0 Springer Science Business Media B V 2008 Keywords Aeronomy The term aeronomy has been used widely for many decades but its origin has mostly been lost over the years It was introduced by Sydney Chapman in a Letter to the Editor entitled Some Thoughts on Nomenclature in Nature in 1946 Chapman 1946 In that letter he suggested that aeronomy should replace meteorology writing that the word meteor is now irrelevant and misleading This proposal was apparently not received with much support so in a short note in Weather in 1953 Chapman 1953 wrote If despite its obvious convenience of brevity in itself and its derivatives it does not commend itself to aeronomers I think there is a case for modifying my proposal so that instead of the word being used to signify the study of the atmosphere in general it should be adopted with the restricted sense of the science of the upper atmosphere for which there is no convenient short word In a chapter he wrote in a 1960 book Chapman 1960 he gave his final and definitive definition by stating that Aeronomy is the science of the upper region of the atmosphere where dissociation and ionization are important The Workshop on Comparative Aeronomy was held at ISSI during the week of June 25-29 2007
