Essays In Biochemistry Vol 20 1985:

Advances in Peptic Ulcer Pathogenesis W.D. Rees, 2012-12-06 Over the past decade a great deal of research activity has occurred on either side of the gastroduodenal epithelial interface with the common goal of elucidating the mechanisms of mucosal protection and how these may be compromised in peptic ulcer disease A prime stimulus to such research has been the realization that abnormal acid secretion or its delivery into the duodenum in excessive amount cannot fully explain ulcer pathogenesis in the majority of patients One may envisage the stomach and proximal duodenum as being in a dynamic equilibrium with aggressive luminal factors such as acid and pepsin being counteracted by protective mucosal mechanisms Until recently the mechanisms involved in mucosal protection had been poorly defined while the physiology and pathophysiology of acid and pepsin secretion had been elucidated The impression that gastroduodenal mucosa was protected by a single mechanism has at last been replaced by a more realistic view suggesting a number of protective zones acting in series Some of these zones may act as first or second line defences against aggressive factors while certain zones may specifically protect against certain aggressors

The Molecular Biology of Neurological Disease Roger N. Rosenberg, A. E. Harding, 2013-10-22 The Molecular Biology of Neurological Disease reviews advances that have been made in understanding the molecular mechanisms of neurological disorders as well as immediate and future applications of molecular biological techniques to clinical practice This book explores the molecular genetics of neurological disease such as muscular dystrophy Joseph disease and Huntington s disease along with the mitochondrial genes implicated in such conditions This text is comprised of 18 chapters and begins by introducing the reader to the basic principles and methods of molecular genetic techniques used in the diagnosis of neurological disease Attention then turns to several aspects of genetic expression in the brain including the extent to which the genome is expressed in the brain The next chapter focuses on the visualization of polyadenylated messenger RNAs in individual cells in mammalian brain using in situ hybridization techniques combined with immunohistochemical localization of specific proteins and neuropeptides implicated in diseases such as Alzheimer dementia This book also discusses the molecular biology of chemical synaptic neurotransmission proteins involved in the regulation of nervous system development and gene expression in skeletal muscle This text then concludes with a summary of the neurological gene map as it stands in the latter part of 1987 This book is intended for physicians who grapple with the problems of neurological disorders on a daily basis including neurologists neurologists in training and those in related fields such as neurosurgery internal medicine psychiatry and rehabilitation medicine

Modern Trends in Biothermokinetics J.P. Mazat, R. Ouhabi, M. Rigoulet, S. Schuster, 2012-12-06 This book includes articles relating to presentations given in a variety of forms lectures posters contributions to round tables software presentations at the 5th International Biothermokinetics Meeting held in Bordeaux Bombannes September 23 26 1992 The fact that not just lectures were considered for these

proceedings reflects the aims of BTK meetings to instigate discussion promote scientific cooperation and confront as many different ideas as possible with each other at best heretical ones BTK conferences have expanded more and more 130 participants came to the 1992 meeting from 20 countries It was therefore necessary to hold the round tables in parallel sessions It is difficult to have an unbiased feeling of what should be selected as the salient features of the meeting As the name suggests Biothermokinetics embraces thermodynamic and kinetic approaches to experimental and theoretical investigations of biological processes in particular at the cellular level This classical point of view is mainly represented in the chapter Thermodynamics and Kinetics of Transport Processes and Biological Energy Transduction
