✓ Exclusively available on IvyPanda

Industrialization is a vital factor that contributed to the fast growth of the population nationwide. First, industrialization is the reason why the market economy was expanding quickly and made countless goods affordable for more people. In addition to the growth in older industries, new areas, such as the steel industry, power production, and petroleum refineries, started flourishing (Library of Congress, n.d.). People observed the transition of their mode of transportation from having to walk and use horses to steam-powered trains, electric trolley vehicles, and eventually gasoline-powered automobiles (Library of Congress, n.d.). Obviously, the quick transition to steam engines and means of transport made the manufacturing and transportation processes faster and more efficient. Consequently, one can see that with the same amount of time and effort, now it was possible to produce a larger amount of goods. A more significant supply, therefore, contributed to lower prices, and people could afford to purchase different goods.

Moreover, industrialization caused urbanization on a nationwide scale, causing millions of people to move to cities and driving rapid growth in developing locations. Previously, agricultural output accounted for 83% of the American working population in 1800, and crops were mainly produced for personal use (Atack et al., 2022). Additionally, the density of the population was low, with the American population of 5.3 million being dispersed across more than 860,000 square miles (Atack et al., 2022). However, with industrialization, people migrated to cities for better job opportunities. Urbanization led to the increasing demand for a workforce to fill positions for new industries. Therefore, industrialization increased the share of the workforce and contributed to the urbanization of the nation, which set the foundation for further developments.

Essays in Regional Economics John F. Kain, John Robert Meyer, 1971 Compilation of essays on government policy and regional planning concerning developing areas in the USA covers such topics as industrial development industrial policy for both urban areas and rural areas surplus labour supply areas urbanization the employment opportunity promotion effects of new plants location location of industry capital flows problems of rural poverty in Southern states etc and includes large scale models for forecasting regional economic activity and descriptions of econometrics research methods *Essays on Regional Economic Development* Greg Coombs, 2001 There is no doubt that globalisation is a major external influence on small regions These essays show how small regions need not be passive players swept away on the current of change that there are actions that can be taken to navigate a path and ride the currents to prosperity **Essays in regional economics** John F. Kain, 1971 Three Essays in Regional Economics Qingyun Qi, 1990 **Regional Economic Development** Benjamin Higgins, Donald J. Savoie, 2017-09-05 Originally published in 1988 Leading international researchers in regional economic development have contributed an integrated set of chapters reviewing the whole field and taking stock of current thinking The book is in honour of François Perroux the father of regional development theory whose contributions to two important concepts in economics time and space have been substantial The book comprises five parts Part one covers Perroux's work in general and on growth poles in particular Part two deals with the politics of place population and regional development techniques for regional policy analysis and a neoclassical approach to regional economics In part three the Canadian scene is reviewed at national and regional levels In part four chapters on urban development small and medium size cities and capital grants deal with the experiences of other countries Part five concludes the book with a chapter on growth poles optimal size of cities and regional disparities and government intervention **Three Essays in Regional Economics** Heather Marie Stephens, 2012 In the United States the economic recession and the ongoing economic restructuring have led researchers and policy makers to revisit their assumptions about the drivers of economic growth My research seeks to understand the drivers of economic growth in two regions of the United States that have suffered the most during the recent period Appalachia and the Great Lakes Region Three Essays in Regional Economics that Consider the Importance of Space, Agglomeration, and Income Derek Gerald Brewin, 2004 **Regional Economic Development** Benjamin Higgins, 2017 **Three Essays on Regional Economics** Carlos Eduardo Lobo e Silva, 2007 This study presents three essays on regional economics *Essays on Regional Economic Development in the United States* Youngjin Song, 2018 My dissertation consists of three essays on U S regional economics The aim of the research is to understand the variations in economic outcomes across regions and how those persistent differences can be reduced In particular I study the geographic patterns and the determinants of internal migration and examine the development of social capital In the first chapter I document U S internal migration between the period from 1960 2000 using a newly collected data set I find that the recent

decline in migration is driven by lower migration across states while within state migration has increased during the observed periods To explain this I use a gravity framework and estimate the effect of state borders on migration flows I find that the border effect is strongly significant and within state migration is 3.2 times higher than across state migration Furthermore the border effect has increased from 2.7 in 1960 to 3.6 in 2000 I show that the differences in social and economic characteristics between areas contribute to a larger state border effect and the increase of the border effect over time is associated with the rising differences in house prices as states implement more restrictive land use regulations I find that this is due to lower migration in states that are highly regulated in land uses For high income destinations the rise in regulations can explain all of the increase in the border effect In the second chapter I examine the effect of political differences on migration decisions and provide empirical evidences of partisan geographic sorting among American migrants Using presidential election returns and the same migration data for the period from 1960-2000 I show that political differences between areas decrease migration as Americans prefer to live in areas with similar ideology and political views I find that there are a lower number of migrants between places that supported different political parties and migration flows decrease as differences in vote shares increase In addition I do not find evidence that Americans are increasingly sorting by partisanship over time which is previously known in the literature as the big sort hypothesis The last chapter studies the level of social trust across regions in the United States and how it arises using natural disasters as exogenous shocks between 1973 and 2010 Every year the United States is hit by natural disasters that take away lives and cause property damage In the event of a natural disaster the victims are more likely to have increased interaction with others If the experience of increased social interaction is positive this can positively affect the level of social trust To test this I combine two U.S. survey data sets with the natural disaster data and find that the individuals who have recently experienced natural disasters are more likely to have higher level of trust One standard deviation increase in natural disasters is associated with an increase of 0.014 standard deviations in trust I also provide evidence of positive social experiences by showing that natural disasters are associated with an increase in cooperation with neighbors

*An Essay on Urban Economic Theory* Yorgos Y. Papageorgiou, David Pines, 2012-12-06 Over the past thirty years urban economic theory has been one of the most active areas of urban and regional economic research Just as static general equilibrium theory is at the core of modern microeconomics so is the topic of this book the static allocation of resources within a city and between cities at the core of urban economic theory *An Essay on Urban Economic Theory* well reflects the state of the field Part I provides an elegant coherent and rigorous presentation of several variants of the monocentric city

model as the centerpiece of urban economic theory treating equilibrium optimum and comparative statistics Part II explores less familiar and even some uncharted territory The monocentric model looks at a single city in isolation taking as given a central business district surrounded by residences Part II in contrast makes the intra urban location of residential and non residential activity the outcome of the fundamental tradeoff between the propensity to interact and the aversion to crowding the resulting pattern of agglomeration may be polycentric Part II also develops models of an urbanized economy with trade between specialized cities and examines how the market determined size distribution of cities differs from the optimum This book launches a new series Advances in Urban and Regional Economics The series aims to provide an outlet for longer scholarly works dealing with topics in urban and regional economics      **Essays in Urban and Regional Economics**

**Three Essays in Regional Economic Modeling** Doleswar Bhandari,2008 My dissertation is about regional economic modeling for understanding local economy economic impact analysis and forecasting In the first essay I developed a nonspatial version of community policy analysis model for Missouri counties In my second essay I introduced space into my model I specified and estimated a model using generalized spatial three stage least square procedures In my third essay using South Korean regional data I compared forecasting accuracy of non spatial spatial lag spatial error and spatial lag and error model using in sample data I also compared the impact estimates of nonspatial and spatial models The spatial components appear to improve the accuracy of the intra county impacts It appears that the estimated parameters tend to be sensitive to the specification of weight matrices if the sizes of spatial units are heterogeneous and vice versa Employment is the main driver of each of the model      Regional Economic Development Benjamin Higgins,Donald J.
