Future Of Physical Education Building A New Pedagogy:

The Future of Physical Education Anthony Laker, 2003-12-16 Anthony Laker leads an outstanding international team of educational theorists in critically examining the theoretical underpinnings of physical education and in challenging the rhetoric the practices and the pedagogies that prevail in our schools There has been a great deal of discussion surrounding the value of this subject in schools particularly around the form that physical education should take The domination of physical education teaching by the scientific technical discourses is problemized and it is suggested that this domination limits the potential of the subject to be culturally and contextually relevant to students in schools This edited collection aims to extend the worldwide academic debate of the future of physical education in schools by challenging the prevailing authorised curricula Each contributor address a key contemporary issue in physical education bringing different perspectives as they relate to the evolving issues of the subject They ask important questions about where we intend to take the knowledge we have gained from a legacy of positive research These chapters tackle critical issues in modernist physical education and suggest how a re evaluation could contribute to the continuing advancement of the subject for more diverse educational benefits Laker draws this body of work together in a conclusion that describes a theoretically and pedagogically innovative physical education curriculum for the 21st century This book is a summary of the current state of research in physical education It invites debate and discussions in the field and re conceptualises physical education theory into inclusive practices located in the postmodern school world

Physical Education Futures David Kirk, 2009-09-10 Can we imagine a future in which physical education in schools no longer exists In this controversial and powerful meditation on physical education David Kirk argues that a number of different futures are possible Kirk argues that multi activity sport based forms of physical education have been dominant in schools since the mid twentieth century and that they have been highly resistant to change The practice of physical education has focused on the transmission of de contextualised sport techniques to large classes of children who possess a range of interests and abilities where learning rarely moves beyond introductory levels Meanwhile the academicization of physical education teacher education since the 1970s has left teachers less well prepared to teach this programme than they were previously suggesting that the futures of school physical education and physical education teacher education are intertwined Kirk explores three future scenarios for physical education arguing that the most likely short term future is more of the same He makes an impassioned call for radical reform in the longer term arguing that without it physical education faces extinction No other book makes such bold use of history to interrogate the present and future configurations of the discipline nor offers such a wide ranging critique of physical culture and school physical education This book is essential reading for all serious students and scholars of physical education and the history and theory of education

Education and Neoliberal Globalization Carlos Alberto Torres, 2008-11-19 This volume by noted critical education scholar Carlos Alberto Torres takes up the question of how structural changes in schooling and the growing impacts of neoliberalism and globalization affect social change, national development and democratic educational systems throughout the world. The first section of the book offers analytical avenues to understand and criticize the practices and policies of neoliberal states, both domestically and internationally. More than a mere lament of the state of educational policy, however, Torres also documents the critiques and alternatives developed by social movements against neoliberal governments and policies. Ultimately, his work urges readers to engage in the struggle to resist the oppressive forces of neoliberal globalization and proactively and deliberately act in informed ways to create a better world.

The Politics of Structural Education Reform Keith A. Nitta, 2008-01-07 Education policymaking is traditionally seen as a domestic political process. The job of deciding where students will be educated, what they will be taught, who will teach them and how it will be paid for clearly rests with some mix of district, state and national policymakers. This book seeks to show how global trends have produced similar changes to very different educational systems in the United States and Japan. Despite different historical development, social norms and institutional structures, the U.S. and Japanese education systems have been restructured over the past dozen years, not just incrementally but in ways that have transformed traditional power arrangements. Based on 124 interviews, this book examines two restructuring episodes in U.S. education and two restructuring episodes in Japanese education. The four episodes reveal a similar politics of structural education reform that is driven by symbolic action and bureaucratic turf wars, which has ultimately hindered educational improvement in both countries.

Teacher Leadership

Kokila Roy Katyal,Colin William Evers,2014-03-14 In recent years teacher leadership has undergone one major revolution and is in the process of undergoing another The first came about as schools turned out to be far too complex for the responsibility of formulating and achieving their goals to be vested entirely in principals and head teachers As a consequence the rise of distributed leadership as an alternative model for understanding schools and their functioning is now commonplace The second major revolution affecting teacher leadership is the rise of the Internet and ICT and the way these give rise to greater and more flexible opportunities for students to become autonomous learners Autonomous student learning now occurs in significant new ways and under parameters that are far more expansive than school based learning An effective model of teacher leadership thus needs to capture these changes in order to reflect the new realities of student learning and student engagement with their schools
