Geomorphology In Deserts:

Geomorphology of Desert Environments Anthony J. Parsons, A. D. Abrahams, 2009-03-20 About one third of the Earth's land surface experiences a desert climate and this area supports approximately 15% of the planet's population. This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology. Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards. This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically. It begins with an overview of global deserts, proceeds through treatments of weathering, hillslopes, rivers, piedmonts, lake basins, and aeolian surfaces, and concludes with a discussion of the role of climatic change. Written by a team of international authors, all of whom are active in the field, the chapters cover the spectrum of desert geomorphology.

Geomorphology in Deserts Ronald U. Cooke, Andrew Warren, 2023-11-15 This book examines the landforms, soils, and geomorphological processes of deserts, which cover over 20% of Earth's land surface. Despite their vastness and the significant body of literature on the topic, deserts remain underrepresented in comprehensive geomorphological surveys, with notable exceptions like Walther's *Das Gesetz der Wiistenbildung* (1924), Cotton's *Climatic Accidents in Landscape Making* (1942), and Tricart and Cailleux's *Le Model des R gions S ches* (1961). Our study builds on these works, incorporating our field experiences in deserts across North America, South America, North Africa, and Pakistan, while primarily drawing on English language research and emphasizing contemporary geomorphological systems at different scales. By focusing on present processes shaping landforms and soils, we have given less attention to regional chronologies of landform development, a consequence of our selective approach. The field of desert geomorphology still grapples with speculative theories such as parallel slope retreat and pervasive wind erosion, which often overshadow empirical evidence. We aim to provide grounded generalizations, clarify contested ideas, and pose meaningful questions to establish a baseline for future research, hoping to contribute to a deeper understanding of the dynamic processes shaping desert landscapes. This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality peer-reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1973.

of Desert Environments A. D. Abrahams, A. Parsons, 2013-04-17 Over the last twenty years there has been a major expansion of knowledge in the field of landforms and landforming processes of deserts This advanced level book provides a benchmark for the current state of science and is written by an international team of authors who are acknowledged experts in their fields *Great Warm Deserts of the World* Andrew Goudie, 2002 This is the first ever regional study of the geomorphology of the world's deserts demonstrating why different deserts have special landscape features and land forming processes It explains the climatic and tectonic history of deserts showing how the histories of the deserts have been long and complex and how they have responded to global changes in climate particularly over the course of the last few millions of years Each of the major warm deserts of the world is treated in detail and the book is extensively illustrated with numerous plates and figures A large and comprehensive bibliography provides a guide to the international literature

GEOMORPHOLOGY IN DESERTS. R.N. COOKE, *Geomorphology of Desert Environments* Vinayak Joshipura, 2025-02-20 Geomorphology of Desert Environments delves into the intricate processes and landforms that shape arid landscapes worldwide Authored by leading experts this comprehensive book explores the dynamic interactions between geological forces climate patterns and ecological systems in desert regions We begin with an overview of geomorphology principles including erosion deposition and weathering processes specific to deserts The role of aeolian processes such as wind erosion and sand dune formation is examined showcasing iconic desert landforms like sand seas and yardangs Through detailed case studies and field observations we highlight the diversity of desert landscapes and the unique geomorphic features of different desert regions From the sandstone buttes of the American Southwest to the salt flats of the Sahara Desert each chapter explores the geological history environmental dynamics and ecological significance of desert landforms We also delve into human environment interactions shaping desert landscapes including the impacts of human activities on erosion rates soil degradation and desertification Sustainable land management practices water resource management and conservation efforts in arid regions are examined Richly illustrated with maps diagrams and photographs this book is an indispensable resource for understanding the complex interplay of geological climatic and ecological factors in desert environments **The History of the Study of Landforms or the Development of Geomorphology, Volume 5** T.P.

Burt, A.S. Goudie, H.A. Viles, 2022-10-20 Co published with British Society for Geomorphology This volume is the fifth in the definitive series *The History of the Study of Landforms or the Development of Geomorphology* Volume 1 1964 dealt with contributions to the field up to 1890 Volume 2 1973 with the concepts and contributions of William Morris Davis and Volume 3 1991 covered historical and regional themes during the classic period of geomorphology 1890 1950 Volume 4 2008 concentrated on studies of geomorphological processes and Quaternary geomorphology between 1890 and 1965 by the end of this period process based studies had become dominant Volume 5 builds on this platform covering in detail the revolutionary changes in approach that characterized the study of geomorphology in the second half of the twentieth century

It is divided into three sections the first deals with changes in approach and method the second with changes in ideas and the broader scientific context within which geomorphology is studied and the final section details advances in research on processes and landforms The volume s objective is to describe and analyse many of the developments that provide a foundation for the rich and varied subject matter of twenty first century geomorphology
