Germany A New Social And Economic History 1450 163:

Catholic Revival in the Age of the Baroque Marc R. Forster, 2001-02-05 This book is a study of Catholic reform popular Catholicism and the development of confessional identity in southwest Germany Based on extensive archival study it argues that Catholic confessional identity developed primarily from the identification of villagers and townspeople with the practices of Baroque Catholicism particularly pilgrimages processions confraternities and the Mass Thus the book is in part a critique of the confessionalization thesis which dominates scholarship in this field The book is not however focused narrowly on the concerns of German historians An analysis of popular religious practice and of the relationship between parishioners and the clergy in villages and small towns allows for a broader understanding of popular Catholicism especially in the period after 1650 Local Baroque Catholicism was ultimately a successful convergence of popular and elite lay and clerical elements which led to an increasingly elaborate religious style

A Social History of England, 1500-1750 Keith Wrightson, 2017-02-23 The first overview of early modern English social history since the 1980s bringing together the leading authorities in the field

Later Medieval Europe Daniel Waley, Peter Denley, 2013-11-26 From the divine right of kings to the political philosophies of writers such as Machiavelli the medieval city states to the unification of Spain Daniel Waley and Peter Denley focus on the growing power of the state to illuminate changing political ideas in Europe between the thirteenth and sixteenth centuries Spanning the entire continent and beyond and using contemporary voices wherever possible the authors include substantial sections on economics religion and art and how developments in these areas fed into and were influenced by the transformation of political thinking The new edition takes the narrative beyond the confines of western Europe with chapters on East Central Europe and the Teutonic knights and the Portuguese expansion across the Atlantic The third edition of this classic introduction to the period includes even greater use of contemporary voices full reading lists and new chapters on East Central Europe and Portuguese exploration Suitable as an introductory text for undergraduate courses in Medieval Studies

and Medieval European History Cities and Solidarities Justin Colson, Arie van Steensel, 2017-01-06 *Cities and Solidarities* charts the ways in which the study of individuals and places can revitalise our understanding of urban communities as dynamic interconnections of solidarities in medieval and early modern Europe. This volume sheds new light on the socio-economic conditions, the formal and informal institutions, and the strategies of individual town dwellers that explain the similarities and differences in the organisation and functioning of urban communities in pre-modern Europe. It considers how communities within cities and towns are constructed and reconstructed, how interactions amongst members of differing groups created social and economic institutions, and how urban communities reflected a sense of social cohesion. In answering these questions, the contributions combine theoretical frameworks with new digital methodologies in order to provoke further discussion into the fundamental nature of urban society in this key period of change. The essays in this collection demonstrate the complexities of urban societies in pre-modern Europe and will make fascinating reading for students and scholars of medieval and early modern urban history.

A Real Presence Joel Van Amberg, 2011-12-09 This book explores conflicts in Augsburg, Germany, during the first decade of the Protestant Reformation over the meaning and celebration of the Eucharist. Seeking to account for the strong appeal among the population of a symbolic interpretation of the Eucharist, it situates the theological debate in the context of conflict between guild members and the leading citizens in the city council over perceived growing political authoritarianism and the political future of the city, and between artisans and powerful merchant elites over changing economic realities of the early modern economy. The author argues that the adoption of a symbolic interpretation of the Eucharist formed part of a broader anti-mediatonal ideology that its supporters applied in the realms of politics, economics, and religion.

Law Addressing Diversity Gijs Kruijtzer, Thomas Ertl, 2017-09-25 Of late, historians have been realising that South Asia and Europe have more in common than a particular strand in the historiography on the rise of the West would have us believe. In both world regions, a plurality of languages, religions, and types of belonging by birth, was in premodern times matched by a plurality of legal systems and practices. This volume describes case by case the points where law and social diversity intersected.

Managing the Wealth of Nations Philipp Robinson Rössner, 2023-03-27 Commerce and manufactures gradually introduced order and good government, wrote Adam Smith in his *Wealth of Nations*, and with them the liberty and security of individuals. However, Philipp Robinson Rössner shows how, when looked at in the face of history, it has usually been the other way around. This book follows the development of capitalism from the Middle Ages through the industrial revolution to the modern day, casting new light on the areas where premodern political economies of growth and development made a difference. It shows how order and governance provided the foundation for prosperity, growth, and the wealth of nations. Written for scholars and students of economic history, this is a pioneering new study that debunks the neoliberal origin myth of how capitalism came into the world.

 geography and political science the authors showcase the natural experiment or comparative method well known in any
 science concerned with the past on the discipline of human history That means according to the editors comparing preferably
 quantitatively and aided by statistical analyses different systems that are similar in many respects but that differ with respect
 to the factors whose influence one wishes to study The case studies in the book support two overall conclusions about the
 study of human history First historical comparisons have the potential for yielding insights that cannot be extracted from a
 single case study alone Second insofar as is possible when one proposes a conclusion one may be able to strengthen one's
 conclusion by gathering quantitative evidence or at least ranking one's outcomes from big to small and then by testing the
 conclusion's validity statistically *Castles, Battles, & Bombs* Jürgen Brauer,Hubert van Tuyl,2024-05-31 Castles Battles
 and Bombs reconsiders key episodes of military history from the point of view of economics with dramatically insightful
 results For example when looked at as a question of sheer cost the building of castles in the High Middle Ages seems almost
 inevitable though stunningly expensive a strong castle was far cheaper to maintain than a standing army The authors also
 reexamine the strategic bombing of Germany in World War II and provide new insights into France's decision to develop
 nuclear weapons Drawing on these examples and more Brauer and Van Tuyl suggest lessons for today's military from
 counterterrorist strategy and military manpower planning to the use of private military companies in Afghanistan and Iraq In
 bringing economics into assessments of military history the authors also bring illumination The authors turn their
 interdisciplinary lens on the mercenary arrangements of Renaissance Italy the wars of Marlborough Frederick the Great and
 Napoleon Grant's campaigns in the Civil War and the strategic bombings of World War II The results are invariably

classic demographic theory to the best contemporary thinking this book will fruitfully replace previous ways of looking at population expansion and contraction The 50 years of scholarship that covers 2 1 2 millennia peoples in all parts of the world and aggregates from hamlets to the global level this volume shows that populations grow or decline according to six related patterns Looking at the path taken by unrestricted population growth the effects of limited resources demographic disaster population explosion and the implications of stable population theory and demographic transition for numerical trends Harris reinterprets and insightfully interconnects all of these via six related growth curves opening the way for a better understanding of how populations expand through changes in births deaths and migrations and how they interact with their economic social and physical environments All six trend types the book shows are shaped by forces internal to the dynamics of populations themselves Most frequently they increase in a constantly proportionally slowing curve as a specific stimulus is spent through expansion With shocks like war or epidemics they contract according to an upside down version of this curve The only two curves until recent times these are still the most common in local populations With modern economic and social change some populations mostly larger ones follow one of four newer growth patterns either increasing at a steady rate growing in a gradually slowing pattern between this constancy and the rapidly decelerating basic growth curve exploding in an accelerating fashion or in a few ominous cases decreasing in an accelerating decline Where these curves occur depends on the distinctive ways populations interact with economic changes Harris s findings have profound implications for understanding economic and social change These implications will be discussed in the following volume

Controlling Contagion Sheilagh Ogilvie, 2025-02-18 How human institutions markets states communities religions guilds and families have helped both to control and to exacerbate epidemics throughout history How do societies tackle epidemic disease In *Controlling Contagion* Sheilagh Ogilvie answers this question by exploring seven centuries of pandemics from the Black Death to Covid 19 For most of history infectious diseases have killed many more people than famine or war and in 2019 they still caused one death in four Today we deal with epidemics more successfully than our ancestors managed plague smallpox cholera or influenza But we use many of the same approaches Long before scientific medicine human societies coordinated and innovated in response to biological shocks sometimes well sometimes badly Ogilvie uses historical epidemics to analyse how human societies deal with externalities situations where my action creates costs or benefits for others beyond those that I myself incur Social institutions markets states communities religions guilds and families help us manage the negative externalities of contagion and the positive externalities of social distancing sanitation and immunization Ogilvie shows how each institution enables us to coordinate innovate and inspire each other to limit contagion But each institution also has weaknesses that can make things worse Markets shut down voluntarily during every epidemic in history but they also brought people together spreading contagion States mandated quarantines sanitation and immunization but they also waged war and censored information exacerbating epidemics Religions admonished us to avoid infecting our neighbours but they

also preached against science and medical innovations What decided the outcome Ogilvie argues was a temperate state an adaptable market and a strong civil society where a diversity of institutions played to their own strengths and checked each other s flaws

The Underground Wealth of Nations Jeannette Graulau,2019-10-08 Silver mining was a capitalist business long before the supposed origin of modern capitalism Hundreds of years before a sixteenth century crisis in European agriculture led to the origins of capital investment and finance the silver mining industry exhibited many of the features of modern capitalism Silver mines were large scale businesses that demanded large investments and steady cash flow achieved by spreading that risk through fungible shares and creating legal structures to protect entrepreneurs from financial disaster Jeannette Graulau argues that mining preceded agriculture as the first true capitalist enterprise of the modern world
