Jean-Michel Réveillac, 2019-07-30. Since 1960, with the advent of musical electronics, composers and musicians have been using ever more sophisticated machines to create sonic material that presents innovation, color and new styles: electro, acoustic, electro house, techno, etc. music. The music of Pierre Henry, Kraftwerk, Pink Floyd, Daft Punk and many others has introduced new sounds, improbable rhythms and a unique approach to composition and notation. Electronic machines have become essential; they have built and influenced the music of the most recent decades and set the trend for future productions. This book explores the theory and practice related to the different machines which constitute the universe of musical electronics, omitting synthesizers which are treated in other works. Sequencers, drum machines, samplers, groove machines and vocoders from 1960 to today are studied in their historical, physical and theoretical context. More detailed approaches to the Elektron Octatrack sequencer sampler and the Korg Electribe 2 groove machine are also included.

Newnes Linear IC Pocket Book R M MARSTON, 2000-01-11. Newnes Linear IC Pocket Book is aimed at all engineers, technicians, students and experimenters who can build a design directly from a circuit diagram. In a highly concise form, Ray Marston presents a huge compendium of circuits that can be built as they appear, adapted or used as building blocks. The devices used have been carefully chosen for their ease of availability and reasonable price. The selection of devices has been thoroughly reviewed for the second edition, which contains approximately 350 new diagrams. Marston deals mainly with strictly linear ICs such as op amps, pre amplifiers, power amplifiers, signal conditioners and power supply regulators, as well as various hybrid types: the 555 timer IC, bar graph display drivers, CCD delay lines, function or wave form generators, phase locked loops and power control ICs. The subjects are treated in an easy to read, highly practical manner with a minimum of mathematics. Ray Marston has proved through hundreds of circuits, articles and books that he is one of the world's leading circuit designers and writers. He has written extensively for *Electronics World*, *Nuts and Bolts Electronics* and *Beyond*.
