**Research topics in software evolution and maintenance ,     **Intelligent Decision Systems in Large-Scale Distributed Environments**** Pascal Bouvry,Horacio González-Vélez,Joanna Kołodziej,2011-06-19 One of the most challenging issues for the intelligent decision systems is to effectively manage the large scale complex distributed environments such as computational clouds grids ad hoc and P2P networks under the different types of users their relations and real world uncertainties In this context the IT resources and services usually belong to different owners institutions enterprises or individuals and are managed by different administrators These administrators conform to different sets of rules and

configuration directives and can impose different usage policies on the system users. Additionally, uncertainties are presented in various types of information that are incomplete, imprecise, fragmentary, or overloading, which hinders the full and precise determination of the evaluation criteria, their subsequent selection, the assignment scores, and eventually the final integrated decision result. This book presents new ideas, analysis, implementations, and evaluation of the next generation intelligent techniques for solving complex decision problems in large-scale distributed systems. In 15 chapters, several important formulations of the decision problems in heterogeneous environments are identified, and a review of the recent approaches from game-theoretical models and computational intelligent techniques such as genetic, memetic, and evolutionary algorithms to intelligent multi-agent systems and networking are presented. We believe that this volume will serve as a reference for the students, researchers, and industry practitioners working in or are interested in joining interdisciplinary works in the areas of intelligent decision systems using emergent distributed computing paradigms. It will also allow newcomers to grasp key concerns and potential solutions on the selected topics.

This first volume focuses on the scope of computational social science, ethics, and case studies. It covers a range of key issues, including open science, formal modeling, and the social and behavioral sciences. This volume explores major debates, introduces digital trace data, reviews the changing survey landscape, and presents novel examples of computational social science research on sensing, social interaction, social robots, bots, sentiment manipulation, and extremism in social media. The volume not only makes major contributions to the consolidation of this growing research field but also encourages growth in new directions. With its broad coverage of perspectives, theoretical, methodological, computational, international scope, and interdisciplinary approach, this important resource is integral reading for advanced undergraduates, postgraduates, and researchers engaging with computational methods across the social sciences as well as those within the scientific and engineering sectors.

**High-Performance In-Memory Genome Data Analysis** Hasso Plattner, Matthieu-P. Schapranow, 2013-11-19

Recent achievements in hardware and software developments have enabled the introduction of a revolutionary technology in memory data management. This technology supports the flexible and extremely fast analysis of massive amounts of data, such as diagnoses, therapies, and human genome data. This book shares the latest research results of applying in-memory data management to personalized medicine, changing it from computational possibility to clinical reality. The authors provide details on innovative approaches to enabling the processing, combination, and analysis of relevant data in real time. The book bridges the gap between medical

experts such as physicians clinicians and biological researchers and technology experts such as software developers database specialists and statisticians Topics covered in this book include amongst others modeling of genome data processing and analysis pipelines high throughput data processing exchange of sensitive data and protection of intellectual property Beyond that it shares insights on research prototypes for the analysis of patient cohorts topology analysis of biological pathways and combined search in structured and unstructured medical data and outlines completely new processes that have now become possible due to interactive data analyses

**Usability Evaluation of Modeling Languages** Christian Schalles,2012-08-23

The usability of graphical modeling languages has not been explicitly considered in past research Most usability evaluation surveys are mainly focusing on applications websites software and technical products Usability has not been focused on within the development of current graphical languages for conceptual modeling Consequently the impact of graphical modeling languages on users as well as the output resulting from their application is not clear Dr Christian Schalles focuses on an empirical usability evaluation of graphical modeling languages in business process and software modeling

**Principles of Health Interoperability HL7 and SNOMED** Tim Benson,2010-05-06 Joined up healthcare makes information available when and where it is needed to improve safety efficiency and effectiveness Politicians may take interoperability between healthcare computer systems for granted but it is non trivial Healthcare integration projects are notoriously under estimated and come in over budget and over time Joined up healthcare depends on standards The two leading standards are the SNOMED CT which is a clinical terminology semantics and HL7 Version 3 which is a specialised healthcare interoperability language syntax Both are new complex and fit for purpose Tim Benson believes there is an unmet need for a book on Healthcare Integration Some health informatics textbooks include chapters on HL7 and or SNOMED but these are usually quite short and cannot provide even an adequate introduction There is little of much value on the Internet or in journals or conference proceedings
