Tricart, 1969 Source-to-Sink Fluxes in Undisturbed Cold Environments Achim A. Beylich, John C. Dixon, Zbigniew Zwoliński, 2016-07-07 Provides the first quantitative overview of global source to sink fluxes in cold climate environments for graduate students and researchers Periglacial Geomorphology Colin K. Ballantyne, 2018-01-16 A FASCINATING AND INFORMATIVE EXPLORATION OF PERIGLACIAL PROCESSES PAST AND PRESENT AND THEIR ROLE IN LANDSCAPE EVOLUTION Periglacial Geomorphology presents a comprehensive introduction to the processes that operate in present periglacial environments and discusses the inferences that can be drawn about former periglacial environments from those processes Organized into six parts the book opens with the historical and scientific context of periglacial geomorphology and the nature of periglacial environments Following chapters provide systematic coverage of the full range of topics germane to a thorough understanding of periglacial geomorphology including The physics of ground freezing and thawing characteristics of permafrost and the nature and origin of underground ice Characteristics formation and significance of landforms sediments and structures associated with permafrost degradation and seasonal ground freezing and thawing Rock weathering in periglacial environments periglacial processes operating on hillslopes and the characteristic landforms produced by rock breakdown and slope processes in cold environments The operation of fluvial aeolian and coastal processes in cold environments and the resulting distinctive landforms and sediments The use of relict periglacial features to reconstruct past cold environments in midlatitude regions and the responses of periglacial environments to recent and predicted climate change Periglacial Geomorphology is an important resource for undergraduate and graduate students studying geomorphology or Quaternary science within the context of geography and geology degree programs It will be of use to all scientists whose research involves an understanding of cold environments whether from a geographical geological ecological climatological pedological hydrological or engineering perspective Canada's Cold Environments Hugh M. French, Olav Slaymaker, 1993 Low temperatures wind chill snow sea ice and permafrost have been primary characteristics of Canada's northern and alpine environments during the past two million years The evolution of Canada's cultural landscapes the processes of settlement of rural areas and the present interaction of Canadian industrial society with its biophysical environment are all deeply influenced directly or indirectly by the frigidity of the greater part of the country. The phenomenon of global warming if it occurs will lessen this coldness but its impact on temperature extremes sea ice regimes vegetation snow distribution

permafrost glaciers lakes rivers and mountain hazards are all the subject of intensive research the highlights of which are reviewed in Canada's Cold Environments Eleven of Canada's leading geographers geologists and ecologists provide an authoritative yet readable scientific statement about the physical nature of Canada's coldness They focus on the distinctive attributes of Canada's cold environments their temporal and spatial variability and the constraints that coldness places on human activity The book is aimed at environmental scientists at all levels who need informed overviews of the substantive findings on a range of cold related topics Geomorphology of Desert Environments Anthony J. Parsons, A. D. Abrahams, 2009-03-20 About one third of the Earth's land surface experiences a desert climate and this area supports approximately 15% of the planet's population This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically It begins with an overview of global deserts proceeds through treatments of weathering hillslopes rivers piedmonts lake basins and aeolian surfaces and concludes with a discussion of the role of climatic change Written by a team of international authors all of whom are active in the field the chapters cover the spectrum of desert geomorphology Geomorphology of Proglacial Systems Tobias Heckmann, David Morche, 2018-11-29 This book discusses the recession of alpine glaciers since the end of the Little Ice Age LIA which has been accelerating in the past decades It provides an overview of the research in the field presenting definitions and information about the different proglacial areas and systems A number of case studies are from the PROSA project group which encompasses the expertise of geomorphologists geologists glaciologists and geodesists The PROSA joint project High resolution measurements of morphodynamics in rapidly changing PROglacial Systems of the Alps is determined to tackle the problems of geomorphic activity on sediment export through a quantification of sediment fluxes effected by the aforementioned geomorphic processes within the forefield of the Gepatschferner glacier Central Alps Austria The SAGE **Handbook of Geomorphology** Kenneth J Gregory, Andrew S Goudie, 2011-06-22 Geomorphology is the study of the Earth s diverse physical land surface features and the dynamic processes that shape these features Examining natural and anthropogenic processes The SAGE Handbook of Geomorphology is a comprehensive exposition of the fundamentals of geomorphology that examines form process and applications of the discipline Organized into five substantive sections the Handbook is an overview of Foundations and Relevance including the nature and scope of geomorphology the origins and development of geomorphology the role and character of theory in geomorphology geomorphology and environmental management and geomorphology and society Techniques and Approaches including observations and experiments geomorphological mapping the significance of models process and form dating surfaces and sediment remote sensing in geomorphology GIS in geomorphology biogeomorphology human activity Process and Environment including the evolution of regolith weathering fluids flows and fluxes sediment transport and deposition hill slopes riverine environments glacial geomorphology periglacial environments coastal environments aeolian environments tropical environments karst and karst processes Environmental Change including landscape evolution and tectonics interpreting quaternary environments environmental change disturbance and responses to geomorphic systems Conclusion including challenges and perspectives and a concluding review The Handbook has contributions from 48 international authors and was initially organized by the International Association of Geomorphologists This will be a much used and much cited reference for researchers in Geomorphology Physical Geography and the Environmental Sciences Changing Cold Environments Hugh M. French, Olav Slaymaker, 2011-10-13 Changing Cold Environments Implications for Global Climate Change is a comprehensive overview of the changing nature of the physical attributes of Canada's cold environments and the implications of these changes to cold environments on a global scale The book places particular emphasis on the broader environmental science and sustainability issues that are of increasing concern to all cold regions if present global climate trends continue Clearly structured throughout the book focuses on those elements of Canada's cold environments that will be most affected by global climate change namely the tundra sub arctic and boreal forest regions of northern Canada and the high mid latitude mountains of western Canada Implications are considered for similar environments around the world resulting in a timely text suitable for second and third year undergraduates in the environmental or earth sciences courses **Periglacial and Paraglacial** Processes and Environments Jasper Knight, Stephan Harrison, 2009 Periglacial and paraglacial environments located outside ice sheet margins but responding to similar climate forcings are key to identifying climate change effects upon the Earth system These environments are relicts of cold Earth processes and so are most sensitive to global warming Changes in the distribution and thickness of permafrost in continental interiors have implications for ecosystem and landscape stability Periglacial Alpine environments are experiencing increased rockfall and mass movement leading to rock glacier instability and sediment release to downstream rivers In turn these landscape effects impact on natural hazards and human activities in these sensitive and geologically transient environments Horizons in Physical Geography M. J. Clark, Kenneth John Gregory, Angela M. Gurnell, 1987-01-01 The authority of the contributors the quality of production and the bibliographic notes are first rate It is essential for basic earth science collections and for any college library that supports geography or geology

**Treatise on Geomorphology** ,2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly

difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned SIPRE Report, Geomorphology and the Carbon Cycle Martin Evans, 2022-01-28 The first systematic examination of the role of geomorphological processes in the cycling of carbon through the terrestrial system Argues that knowledge of geomorphological processes is fundamental to understanding the ways in which carbon is stored and recycled in the terrestrial environment Integrates classical geomorphological theory with understanding of microbial processes controlling the decomposition of organic matter Develops an interdisciplinary research agenda for the analysis of the terrestrial carbon cycle Informed by work in ecology microbiology and biogeochemistry in order to analyse spatial and temporal patterns of terrestrial carbon cycling at the landscape scale Considers the ways in which as Humanity enters the Anthropocene the application of this science has the potential to manage the terrestrial carbon cycle to limit increases in atmospheric carbon **Martian Aeolian** Geomorphology Zhibao Dong, Chao Li, Ping Lü, 2025-06-14 This book covers Martian Aeolian Geomorphology and is

organized around three main foci The first focus is about advancing our understanding of aeolian geomorphology through research on Martian aeolian landforms Chapters 1 through 4 provide essential knowledge for understanding the aeolian geomorphology of Mars Among them Chapters 1 and 2 provide readers with a clear understanding of the significance scientific status and methodology of the study of aeolian geomorphology on Mars Chapters 3 introduces the physics of aeolian geomorphology and Chapter 4 presents an overview of Mars Chapters 5 and 6 are devoted to the Martian atmosphere and Martian sediments respectively constituting the dynamic conditions and the material basis for the formation of aeolian landforms their basic characteristics the processes that control their formation and evolution and comparisons with Earth Chapters 7 and 8 discuss the geomorphological types morphology and distribution of dunes on Mars and extract information on the developmental environment and processes that control dune landforms The second focus of this book concerns the unique characteristics of Martian aeolian landforms Chapters 9 and 10 provide thorough introductions to several unique Martian aeolian landforms The third focus is to provide a textbook for graduate students To facilitate understanding of Martian aeolian landforms and deepen the reader's comprehension of current aeolian geomorphological theories we connect the characteristics of various aspects of Martian aeolian landforms with the relevant theories and especially the classical theories that have stood the test of time At the same time we try to present different viewpoints and hypotheses on relevant scientific issues leaving readers with wide room for innovative thinking The book s 12 chapters are ordered to start with an overview of fundamental knowledge Chapters 1 to 4 continue Chapters 5 to 11 by describing the book s core content and conclude Chapters 12 by relating what we believe about Mars to what we know about Earth

Geomorphology: Pure and Applied M.G. Hart,2020-05-11 This unique treatment of geomorphology first published in 1986 provides a comprehensive work to enable students to see the subject as a whole Taking the concepts that run through the subject and cut across its standard divisions the book summarises the history of intellectual debate in geomorphology and then describes modern developments both pure and applied Engineering Geology and Geomorphology of Glaciated and Periglaciated Terrains J.S. Griffiths,C.J. Martin,2017-10-18 The Engineering Group of the Geological Society Working Party brought together experts in glacial and periglacial geomorphology Quaternary history engineering geology and geotechnical engineering to establish best practice when working in former glaciated and periglaciated environments The Working Party addressed outdated terminology and reviewed the latest academic research to provide an up to date understanding of glaciated and periglaciated terrains This transformative state of the art volume is the outcome of five years of deliberation and synthesis by the Working Party This is an essential reference text for practitioners students and academics working in these challenging ground conditions The narrative style and a comprehensive glossary and photo catalogue of active and relict sediments structures and landforms make this material relevant and accessible to a wide readership Landforms of Cold Climates John Lloyd Davies, 1969
