Controversies and the Metaphysics of Mind Yaron M. Senderowicz, 2010 Since ancient times metaphysical theories have been shaped by the dialectical relations between metaphysical positions The present book offers a new account of the role of controversies in the evolution of ideas in current metaphysics of mind Part One develops a pragmatic theory of metaphysical controversies that combines Kantian themes and themes from current argumentation theory The theory developed in this book underscores the role of a unique type of dialectical arguments which establish metaphysical positions as controversial relevant alternatives in the evolution of chains of debates in metaphysics In Part Two and Part Three this theory is applied to chains of debates in present day metaphysics of mind which address the problems of consciousness and personal identity One of the contentions defended in this book is that the intellectual history of metaphysics is not a process in which positions are replaced by opposite positions but rather a history of their status as relevant alternatives The book analyzes in detail and demonstrates how progress in contemporary

metaphysics of mind consists in a dialectical process through which challenges to extant positions lead to innovative alternatives that are intrinsically relevant to advancing the understanding of the issues under discussion The Development of Controversies Manouchehr Moshtagh Khorasani,2008 Has the internet changed the nature of conducting controversies This question cannot be answered easily as different forms of human interaction in an online environment exist and controversies in an online environment have not been analyzed from a linguistic point of view so far On the other hand there are many linguistic analyses of controversies in the Early Modern Period First this volume describes the communicative background of two online discussion forums dedicated to the study of historical arms and armor Then the volume analyzes the similarities and differences between Early Modern controversies and controversies in online internet discussion forums Further this book offers an accurate analysis of the strategies used in online discussion forums analyzing two controversial threads taken from two online discussion forums and provides insights into the individual tactics and strategies applied in online controversies and highlights the similarities and differences of applied principles norms and rules The book finally comments on stylistic choices used by participants in the controversies **Controversies and Subjectivity** Pierluigi Barrotta,Marcelo Dascal,2005-09-22 This collective volume focuses on two closely connected issues whose common denominator is the embattled notion of the subject The first concerns the controversies on the nature of the subject and related notions such as the concepts of I and self From both theoretical and historical viewpoints several of the contributors show how different and incompatible perspectives on the subject can help us understand today s world its habits style power relations and attitudes For this purpose use is made of insights in a broad range of disciplines such as sociology psychoanalysis pragmatics intellectual history and anthropology This interdisciplinary approach helps to clarify the multifaceted character of the subject and the role it plays nowadays as well as over the centuries The second issue concerns the subject in inter personal as well as in intra personal controversies The enquiry here focuses on the ways in which different aspects of the subject and subjective differences affect the conduct content and rationality of controversies with others as well as within oneself on a variety of topics Among such aspects the contributors analyse the subject s emotions cognitive states argumentative practices and individual and collective identity The interaction between the two issues the controversies on the subject and the subject of controversies sheds new light on the debate on modernity and its alleged crisis **Controversy Spaces** Oscar Nudler,2011 The notion of controversy space is the key element of the new model of scientific and philosophical change introduced in this book Devised as an alternative to classical models the model of Controversy Spaces is a heuristic tool for the reconstruction of processes of conceptual change in the history of science and philosophy The first chapter of this volume outlines in its initial section the historical trajectory of the dialectical adversarial approach to the progress of knowledge from its ancient flourishing and its almost complete oblivion in modernity up to its contemporary revival Then the main features that characterize the structure and dynamics of controversy spaces are

identified and examined In the rest of the book the reader will find a detailed fascinating series of case studies that apply the CS model in a variety of scientific areas ranging from physics to linguistics as well as the philosophy of mind and the philosophy of historiography

Controversies Within the Scientific Revolution Marcelo Dascal, Victor D. Boantza, 2011
 From the beginning of the Scientific Revolution around the late sixteenth century to its final crystallization in the early eighteenth century hardly an observational result an experimental technique a theory a mathematical proof a methodological principle or the award of recognition and reputation remained unquestioned for long The essays collected in this book examine the rich texture of debates that comprised the Scientific Revolution from which the modern conception of science emerged Were controversies marginal episodes restricted to certain fields or were they the rule in the majority of scientific domains To what extent did scientific controversies share a typical pattern which distinguished them from debates in other fields Answers to these historical and philosophical questions are sought through a close attention to specific controversies within and across the changing scientific disciplines as well as across the borders of the natural and the human sciences philosophy theology and technology

Controversy and Confrontation Frans H. van Eemeren, Bart Garssen, 2008-12-17
 The essays that are collected in Controversy and Confrontation provide a closer insight into the relationship between controversy and confrontation that deepens our understanding of the functioning of argumentative discourse in managing differences of opinion Their authors stem from two backgrounds First the controversy scholars Dascal Marras Euli Regner Ferreira and Lessl discuss historical controversies in science both from a theoretical and an empirical perspective Saim concentrates on a historical controversy Fritz provides a historical perspective on controversies by analyzing communication principles Second the argumentation scholars Johnson van Laar van Eemeren Garssen and Meuffels address theoretical or empirical aspects of argumentative confrontation Aakhus and Vasilyeva examine argumentative discourse from the perspective of conversation analysis Jackson analyzes argumentative confrontation in a recent debate between scientists and politicians Last but not least two contributors Kutrov tz and Zempl n make an attempt to bridge the study of historical controversy and the study of argumentation

Traditions of Controversy Marcelo Dascal, Hanliang Zhang, 2007 Controversies may be particularly prominent in one or another culture Yet there is hardly any culture where they do not exist This book assumes that the practice of controversy along with its theorization constitutes in each of the cultures and disciplines where it develops a tradition Whether there are enough shared elements in these traditions to consider them as fundamentally universal or not is something that can only be determined on the basis of a rich sample of controversies and theorizations thereof belonging to different traditions This is what this volume provides to the reader By presenting side by side controversies from the East and from the West from the ancient past up to the present from different domains of scholarship and action the reader is in a position not only to admire the widespread nature role and richness of the phenomenon but also to begin to evaluate its variety as well as universality While the editors have purposefully avoided comparative studies of traditions of controversy in order to focus on each tradition so to speak from its practitioners point of view some of the chapters take a bird s eye view and exemplify how such studies can be systematically conducted In a world that is globalizing itself at a fast pace the awareness of the multiplicity of traditions of controversy is fundamental for ensuring both that the integration of the various perspectives is harmonious and that each one of them is granted its place in a plural universe

Controversies and Interdisciplinarity Jens Allwood, Olga Pombo, Clara Renna, Giovanni Scarafile, 2020-10-15 Nowadays the forms assumed by

knowledge indicate an unhinging of traditional structures conceived on the model of discipline. Consequently what was once strictly disciplinary becomes interdisciplinary, what was homogeneous becomes heterogeneous and what was hierarchical becomes heterarchical. When we look for a matrix of interdisciplinarity that is to say a primary basis or an essential dimension of all the complex phenomena we are surrounded by, we see the need to break with the disciplinary self-restraint in which often completely inadvertently many of us lock ourselves up, remaining anchored to our own competences, ignoring what goes beyond our own sphere of reference. However, interdisciplinarity is still a vague concept and a much demanding practice. It presupposes the continuous search for convergent theoretical perspectives and methodologies and the definition of common spaces and languages as well as a true dialogical and open mind of several scholars. From ethics to science, from communication to medicine, from climate change to human evolution, the volume *Controversies and Interdisciplinarity* offers a series of original insights beyond disciplinary fragmentation for a new knowledge model.
