John Pathy, Alan J. Sinclair, John E. Morley, 2006-02-03 The fourth edition of the highly acclaimed Principles and Practice of Geriatric Medicine provides an account of the fundamental changes associated with ageing which are essential to our understanding and

management of the elderly sick population The title has been extensively revised and updates to reflect the enormous changes in treatment options and medical conditions emerged since publication of the third edition Written by worldwide experts of international repute this is the most up to date and comprehensive single reference source currently available Principles Practice of Geriatric Medicine Fourth Edition incorporates More than 30 new chapters including Preventive geriatrics Anorexia of Aging Managements of Weight Loss Dehydration Vitamins and Minerals in the Elderly Cancer and Aging Mild Cognitive Impairment Treatment of Behavioral Disorders The Older Patient with Down s Syndrome Drug Abuse in Older People Breast Cancer Women s health A truly global perspective including new chapter on Care of the elderly in Israel old age in a young land Geriatric Medicine in China Geriatric medicine education in Europe Geriatrics from the European Union Perspective India Day Hospitals Perspectives from Latin America The title will be indispensable for all those involved in the treatment of older patients Gerontologists to keep up to date with the latest developments in the field General practitioners and specialists in health policy and community care who increasingly have to deal with a significant number of older people Academic researchers in geriatric medicine who are in need for an all encompassing reference work Medical registrars UK residents US in order to pass their exams Teachers of Geriatric Medicine Hospital libraries with increasing budgets to spend on much needed resource in this growing field Professionals within the pharmaceutical industry in order to monitor treatment options and new prescription developments Problems in Geriatric Medicine A. Martin, 2012-12-06 The fact that there are special problems in the care of the elderly in the community is ample justification for writing a separate volume on the subject The knowledge that there are increasing numbers of older people in virtually every country in the world makes it all the more important that the family physician should have sympathy with and understanding of the problems of them since they are likely to make up a significant part of his workload and increasingly will take up more of his time and energy There is a progressive amount of disability with advancing years and this is particularly true of those aged 75 years and over Increasing age is associated with serious impairment of hearing and vision senses which younger people take for granted Old age sees the arrival of major diseases of middle age with much greater frequency such as ischaemic heart and cerebrovascular disease diabetes mellitus and osteoarthritis There are other disorders that are virtually confined to the elderly such as fractures of the femoral neck Paget s disease and myeloma We now know that the disintegration of the conducting tissue of the heart is largely an age related phenomenon Ageing processes affect every major organ system in the body and the impairment of physiological performance resulting from these affects the elderly individual s response to infections disease and environmental changes in complex ways that are not seen in younger people **Geriatric Problems in General Practice** Gordon K. Wilcock, John Armstrong Muir Gray, J. Murray Longmore, 1991 In this second edition many new chapters have been added to address the evolving health care concerns of elderly persons These chapters examine the objectives of geriatric medicine and its ethical dilemmas the aging mind and its effects on family members and physicians

and the organization of effective geriatric health care services The book continues to provide a comprehensive reference for all those who see treat and support the elderly in their home **Geriatric Medicine** Christine K. Cassel, Rosanne Leipzig, Harvey Jay Cohen, Eric B. Larson, Diane E. Meier, 2006-05-29 Since the publication of the third edition of Geriatric Medicine extraordinary advances have occurred in the science of aging and the potential for biomedical research to give us answers to many if not most of the age related disorders that threaten the quality of life in older years At the most basic level the successful mapping of the human genome was declared complete in the fall of 2000 Understanding the map of the human genome is as important as understanding the map of genomes of important laboratory species ranging from the microscopic worms and fruit flies used in most classic genetic studies to rodents such as laboratory mice and eventually to primates on which much of the research on the aging human brain is done The genetic maps of all of these species including our own does not answer clinical questions but it does open the door to dramatic rapid and efficient answers to questions about the genetic polymorphisms related to diseases in humans The telomerase story also unfolded since the third edition Telomerase is an enzyme responsible for maintaining the telomeres the redundant DNA portions at the end of chromosomes whose shortening seems to be linked directly to cell senescence apoptosis and the control over cell death which at the level of the individual cell seems to be linked to the decline of organ function and eventually aging and death within the organism
