Building an Innovation Hotspot Alicia Cameron, 2022-06-01 How can you increase innovation at local levels and build new technology hotspots Building an Innovation Hotspot outlines the approaches governments communities and industry have used to stimulate innovation and examines the evidence behind them It also identifies real world examples where these approaches have worked and where they have failed As future industries will be built on new technologies particularly digital technologies the final chapters of this book consider how artificial intelligence blockchain augmented and virtual reality and 3D printing might change not just where innovation occurs but innovation itself Stimulating innovation will be key to addressing our future needs in the shadow of the COVID 19 pandemic and in tackling the all pervasive impacts of climate change This is an essential book for anyone looking to build their local economy and compete in a more globalised world connected by the next wave of digital technology

Biodiversity Hotspots Frank E. Zachos, Jan Christian Habel, 2011-09-15 Biodiversity and its conservation are among the main global topics in science and politics and perhaps the major challenge for the present and coming generations This book written by international experts from different disciplines comprises general chapters on diversity and its measurement human impacts on biodiversity hotspots on a global scale human diversity itself and various geographic regions exhibiting high levels of diversity The areas covered range from genetics and taxonomy to evolutionary biology biogeography and the social sciences In addition to the classic hotspots in the tropics the book also highlights various other ecosystems harbouring unique species communities including coral reefs and the Southern Ocean The approach taken considers but is not limited to the original hotspot definition sensu stricto and presents a chapter introducing the 35th hotspot the forests of East Australia While due to a bias in data availability the majority of contributions

on particular taxa deal with vertebrates and plants some also deal with the less studied invertebrates This book will be essential reading for anyone involved with biodiversity particularly researchers and practitioners in the fields of conservation biology ecology and evolution

Transformative Food Value Chains for Local Development Silke Maria

Stöber,Wolfgang Bokelmann,Walter Odongo,Susanne Huyskens-Keil,Joanita Kataike,2024-01-26 Understanding the capacity of food systems to undertake a transformation towards sustainability requires understanding how resources stream in and out of the systems As complex socio economic structures food and agricultural value chains are important means for channeling resources knowledge and agency in and out of rural areas Given their prominent role on the development agendas there is mixed evidence as to what extent value chains and their actors can contribute to improving the livelihoods in poor rural and urban areas In order to shape sustainable living places transformative capacities and good governance are important mainstays Transformative agri food value chains are robust and often act as the sole transmission belt for returning capital resources and identity back into vulnerable areas Moreover domestic or regional chains may provide urban consumers with fresh quality food that also contributes to regional identity

Sustainable Construction Víctor

Yepes,Tatiana García-Segura,2021-05-20 Construction is one of the main sectors that generates greenhouse gases This industry consumes large amounts of raw materials such as stone timber water etc Additionally infrastructure should provide service over many years without safety problems Therefore their correct design construction maintenance and dismantling are essential to reducing economic environmental and societal consequences That is why promoting sustainable construction has recently become extremely important To help address and resolve these types of questions this book explores new ways of reducing the environmental impacts caused by the construction sector as well promotes social progress and economic growth The chapters collect the papers included in the Sustainable Construction Special Issue of the Sustainability journal The papers cover a wide spectrum of issues related to the use of sustainable materials in construction the optimization of designs based on sustainable indicators the life cycle assessment the decision making processes that integrate economic social and environmental aspects and the promotion of durable materials that reduce future maintenance

Handbook of

Waste Biorefinery Eduardo Jacob-Lopes,Leila Queiroz Zepka,Mariany Costa Deprá,2022-09-01 This handbook discusses the latest developments in biorefinery technologies for waste to energy conversion The growing global population and the accompanying increase in consumption and waste production make it urgent to find the best possible use of our resources A sustainable waste management under the biorefinery concept has great potential to support a sustainable circular economy and green energy production This handbook is divided into four parts First the reader is introduced to the fundamentals and recent trends of waste to energy technologies The second part describes in detail the current status challenges and potential of the different feedstocks used for waste to energy conversion Here municipal solid waste sewage sludge oils and greases generated during food preparation industrial wastewaters and agricultural wastes to name a few are introduced In the third

part numerous waste to energy technologies are discussed in detail including anaerobic digestion composting gasification plasma technology thermal cracking and others Advantages and optimization potentials of these technologies for efficient residue management quality and yield are highlighted Finally the handbook discusses social environmental and economic aspects of waste to energy biorefinery technologies Readers will learn more about the major bottlenecks and solutions in bioenergy commercialization the logistics of biomass supply and the carbon footprint of waste biorefineries The ideas and technologies presented in this book contribute to the UN Sustainable Development Goal SDG of Affordable and Clean Energy This book is a useful reference for postgraduate students and researchers interested in biorefinery and biofuel technologies both in academia and commercial laboratories Early career scientists can use it to fast track into the field Advanced scientists will find it helpful in gaining a broader overview of the field beyond their area of specialization

Biodiversity Hotspot of the Himalaya T. Pullaiah,2024-07-05 Biodiversity is declining at an alarming rate due to anthropogenic activities around the world This book is the second volume in the new series Biodiversity Hotspots of the World which highlights the 36 hotspot regions of the world regions that have been designated as reaping maximum benefit from preservation efforts This series is our humble attempt to document these hotspots as a conservation and preservation measure The concise volumes in this series focus on the most interesting and important properties of these hotspots covering physiography and climatology vegetation and forest types amphibian and reptile biodiversity genetic diversity of crops plants fishes butterflies insects birds mammals angiosperms and gymnosperms and much more And of course the unique threats and conservation efforts for the areas are addressed as well The Himalayan Mountains are the highest mountain range in the world and include Mount Everest as well as eight other highest peaks of the world While it is difficult to document the biodiversity of this inhospitable terrain we do know that out of the 9 000 different species of plants recorded in the area 3 500 plants are endemic to the Eastern Himalaya region Anthropogenic activities including deforestation fragmentation of habitats pollution high population climate change and poaching of wildlife pose serious threats to the biodiversity of the region The highlands have exceptionally rich biodiversity high endemism and over 160 globally threatened species including the densest population of Bengal tigers and the three largest herbivores on the continent the Asian elephant greater one horned rhinoceros and wild water buffalo The region boasts the world s richest counts of alpine flora within its temperate broad leaved forests with a total of 10 000 species of plants This volume Biodiversity Hotspot of the Himalayas as well as the other volumes in this series will be essential resources for researchers and practitioners in the fields of conservation biology ecology and evolution as the series concisely records the existing biodiversity of these hotspots of the world Editor & Publisher ,1959 The fourth estate *Ocean Island Volcanoes: Genesis, Evolution and Impact* Adriano Pimentel,Ricardo S.

Ramalho, Laura Becerril, Patricia Larrea, Richard J. Brown, 2020-06-08 Ocean island volcanoes constitute some of the most prominent and rapidly formed features on Earth and yet they cannot be explained by conventional plate tectonics. Although typically associated with intraplate settings, hotspots, these volcanoes also occur in different geodynamic settings near mid-ocean ridges. The nature of ocean island magmatism is still the subject of intense debate within the geological community. Traditionally, it has been linked to the presence of mantle plumes at depth, e.g., Hawaii, although the interaction with plate tectonics is also recognized to play a significant role, e.g., Azores, Galapagos. Magma compositions may range from basaltic to more differentiated, which consequently is accompanied by striking changes in the eruption style from effusive-dominated to highly explosive volcanism. Understanding how these magmas evolve and how volcanic processes act at ocean island volcanoes are key issues of modern volcanology. Moreover, the growth of ocean island volcanoes from their rise on the seafloor as seamounts to island emergence and subsequent formation of shield volcanoes and, in some cases, large caldera volcanoes is governed by multiple interrelated changes. It is well known that competing processes model ocean island volcanoes during alternating and/or coeval periods of construction and destruction. The geological evolution of these volcanoes results from the balance among volcanism, intrusions, tectonics, subsidence, uplift, mass wasting, sedimentation, and subaerial and wave erosion. A better knowledge of the interplay between these processes is crucial to obtain a more comprehensive understanding of the evolution of such volcanoes and to the eventual formulation of a unified model for ocean island evolution. Ocean islands are especially vulnerable to volcanic eruptions and other geological hazards on account of their typical small size, rough topography, and isolation, which make risk management and evacuation difficult. Volcanic eruptions, in particular, may have a significant impact on local populations, infrastructures, economy, and even on the global climate. It is therefore fundamental to monitor these volcanoes with complementary geophysical, geodetic, and geochemical techniques in order to forecast future eruptions and their impacts. However, the assessment of volcanic hazards on ocean islands is challenging due to the large variety of phenomena involved, e.g., lava flows, tephra fallout, pyroclastic density currents, lahars, gas emissions. Different approaches are used to assess volcanic hazards, either based on empirical methods or sophisticated numerical models focusing on a single phenomenon or the combination of different hazards. This Frontiers Research Topic aims to promote discussion within the scientific community, representing an important step forward in our knowledge of ocean island volcanoes in order to serve as a reference for future research.

Environmental Engagement and Cultural Value: Global Perspectives for Protecting the Natural World Fanli Jia, Tobias Krettenauer, 2020-02-04 Environmental issues are a rapidly growing focal point in today's global discussion. These issues are becoming increasingly pertinent due to the potentially devastating outcomes of human environmental carelessness. As a species, humans now have realized the need for worldwide environmental engagement. This engagement is intended to heighten awareness about environmental problems, build knowledge in education, and change human behaviors to improve sustainability. Synthesizing the literature on cultural

dimensions e.g. attitudes, beliefs, values that undergird positive views of environmental issues and engagement of sustainability practices would significantly contribute to the development of effective approaches to fostering sustainable environmental practices. Through the identification of commonalities across cultures and sensitivity to cultural differences we can begin to work toward a global consensus on viable solutions to this critical issue.

Arms Sales and Regional Stability

The International Institute for Strategic Studies (IISS), 2023-04-28. The book considers the main arms exporting countries including China, Russia and the US as well as several European states and the policies each employs in deciding advanced weapons sales to key regions of the world. It examines whether such sales are inherently stabilising or destabilising regarding regional security. Regions reviewed in detail include the Middle East and the Indo Pacific. Combat aircraft sales are a focus for the volume given both their practical and symbolic importance. The volume focuses on the behaviour and policies of the main arms exporting nations since the end of the Cold War, shifts in their arms export policies and the tensions that can emerge within or between countries over proposed arms sales. It also considers the impact of countries that were previously only recipients of advanced weapons moving to develop their own defence industrial base.

Population

Dynamics of the Reef Crisis, 2020-11-13. Population Dynamics of the Reef Crisis, Volume 87 in the Advances in Marine Biology series, updates on many topics that will appeal to postgraduates and researchers in marine biology, fisheries science, ecology, zoology and biological oceanography. Chapters in this new release cover SCTLD disease and coral population dynamics in S. Florida, spatial dynamics of juvenile corals in the Persian/Arabian Gulf, surprising stability in sea urchin populations following shifts to algal dominance on heavily bleached reefs, biophysical model of population connectivity in the Persian Gulf, population dynamics of 20-year decline in clownfish anemones on coral reefs at Eilat, northern Red Sea and much more. Reviews articles on the latest advances in marine biology. Authored by leading figures in their respective fields of study. Presents materials that are widely used by managers, students and academic professionals in the marine sciences.

A Relational Approach to Governing Wicked Problems

Peeter Selg, Georg Sootla, Benjamin Klasche, 2023-12-13. The book initiates a relational turn in policy making and governance by developing further relational political analysis and by taking relational thinking to bear on not just analytic/descriptive issues but also to normative/prescriptive issues. The need for such a turn, this book argues, comes from the ever-increasing relevance of addressing the so-called wicked problems of governance like climate change, COVID-19, kinds of pandemics, global economic recessions and refugee crises. The book argues for a need to rethink governance as a process from the relational point of view to spur its potential for addressing these problems. What needs to be rethought is not so much the specific tools or resources

of governance but the very issue of whether governance should be seen in terms of tools and resources in the first place This book contributes to this discussion by consolidating the relational approaches to governance thus far and by taking them to a next normative prescriptive level

A Day-by-Day Chronicle of the 2013-2016 Ebola Outbreak Stephan Gregory Bullard,2018-04-12 This powerful history describes the daily progression of the Ebola outbreak that swept across West Africa and struck Europe and America from December 2013 to June 2016 A case study on a massive scale it follows the narratives of numerous patients as well as the journey of physicians and scientists from discovery to action and from tracking to containment The unfolding story reveals ever shifting complexities such as the varied paths the infection took from country to country the multiple responses of community members and the occurrence of flare ups when the outbreak was seemingly over The book s finely documented present tense reporting records key facts events and observations including Routes of Ebola transmission incubation symptoms short and long term effects on survivors Early attempts to understand and contain the virus and curb practices contributing to its spread Medical governmental and public responses from local education programs to global efforts Communication and conflict between healthcare workers and communities Social and economic outcomes of Ebola in the affected nations Ebola remains incurable although a vaccine is now available For members of the medical community public health officials medical historians scholarly professionals and interested laypeople A Day by Day Chronicle of the 2013 2016 Ebola Outbreak makes starkly clear what we can learn from these events not only for future outbreaks of Ebola but also for the emergence of as yet unknown diseases

The Economics of Defense Industry Thomas-Durell Young,2023-10-17 This book on the economics of defence industry assesses a series of historical and contemporary case studies that consistently demonstrate the need for governments to recognise and thereafter factor the financial needs of a narrow industrial sector that is capital intensive technologically advanced and that requires a highly skilled labour force Since the end of the cold war Western governments have systematically reduced financial support to their domestic defence industry and have seemingly ignored planning and funding industrial mobilisation In all cases government policy has been to encourage industries to consolidate capacity to become financially viable in a sector that has seen diminished demand The 2022 Russian invasion of Ukraine has caused Western governments to reassess their previous assumptions Efforts to increase industrial capacity have been met with the iron laws of economics whereby businesses need to show return on investments The chapters in this volume posit that efforts to rationalise industrial capacity and innovation to meet short term financial efficiencies inevitably results in limited expensive and long delays in increased production in times of international crisis This book serves as an essential guide for academics researchers and students interested in defence economics industrial economics international relations and industrial policy The chapters in this book were originally published in various issues of Defense Security Analysis
