A. Mabuhay, 2014-05-09 This book focuses on three major means of achieving a low carbon society conservation of the ecosystem complex changes of arrangement of landscapes and creation of biodiversity There are specific countermeasures to

be taken for carbon absorption in the three types of landscapes urban cultural and natural because their carbon balances differ Urban landscapes are promising sites because they have the potential for greening and the creation of biodiversity Cultural landscapes in the tropics had not been actively researched until recently but this book now presents a collection of several cases focused on those areas Natural landscapes had existed in abundance in developing countries later nature protection areas were designated to coexist with development Now however developmental pressure has penetrated into those nature protection areas and landscape ecological projects are urgently required to preserve them As a result of global warming abnormal weather phenomena including super typhoons have occurred frequently in recent years The major underlying cause is the higher concentration of greenhouse gases released by human activities As well major natural absorbers of CO<sub>2</sub> such as forests wetlands and coral reefs are shrinking and the human impact is causing the ecological balance to deteriorate Controlling CO<sub>2</sub> emissions and expanding the CO<sub>2</sub> absorbers are keys to reducing total CO<sub>2</sub> Low carbon societies can be established by maintaining the original CO<sub>2</sub> balance through integration of multiple tools with contributions from diverse fields such as physics and chemistry physiology and humanities and education On the basis of an international consensus the environment must be protected no matter what sacrifices are required As this book demonstrates achieving a low carbon society is a top priority and landscape conservation is the first step in ecological research toward that goal

has been part of early childhood programs since the initial kindergarten developed by Friedrich Froebel more than one hundred and fifty years ago While research shows that most teachers value children's play they often do not know how to guide that play to make it more educational Too often in reflecting the value of child initiated activities teachers set the stage for children's play observe it but hesitate to intervene in that play They may fear that to intervene is to create a developmentally inappropriate set of educational practices However the lack of intervention may limit the educational outcomes of play Meanwhile a large body of research exists on different forms of children's play in educational settings that could inform teachers of young children and help them to improve their practice and support more educational play Saracho and Spodek bring together much of that research in an accessible volume for early childhood teachers and teacher educators
