## **Economics Of Smoking:**

*The Economics of Smoking* Robert D. Tollison, Richard E. Wagner, 1991-10-31 Cigarettes are under political attack at all levels of government in the United States From Washington D C to state capitals to local governments proposals abound to increase the cigarette excise tax to impose smoking bans to prevent cigarette advertising to restrict the sale of cigarettes through vending machines to cut off the export of cigarettes to earmark the cigarette excise tax for health programs to divest the stock of cigarette companies and so on And all of these are purportedly being advocated in the name of health Undergirding and abetting the health argument is an economic argument that claims to place a value of up to 100 billion per year on the alleged health costs of smoking to the American economy which is more than 3 per pack of cigarettes smoked As our title suggests our interest lies in the economics of smoking and not in the health issues surrounding smoking We are professional economists and not medical scientists We will focus on what if any economic consequences arise for nonsmokers when smokers smoke For purposes of our discussion we simply accept the premise that smoking damages health and proceed with our analysis Since we have not studied the issue ourselves we have no way of knowing whether such a premise is true But it really does not matter for getting the economics of smoking right The important point resides in who pays for whatever to smoking

*The Economics of Smoking* Frank J. Chaloupka, Kenneth E. Warner, 1999 While the tobacco industry is among the most substantial and successful economic enterprises tobacco consumption kills more people than any other product Economic analysis of tobacco product markets particularly for cigarettes has contributed considerable insight to debates about the industry's importance and appropriate public policy roles in grappling with health consequences of tobacco The most significant example is the rapidly expanding and increasingly sophisticated body of research on the effects of price increases on cigarette consumption Because excise tax is a component of price the resultant literature has been prominent in legislative debates about taxation as a tool to discourage smoking and has contributed theory and empirical evidence to the growing interest in modeling demand for addictive products This chapter examines the research and several equity and efficiency concerns accompanying cigarette taxation debates It includes economic analysis of other tobacco control policies such as advertising restrictions prominent in tobacco control debates Research addressing the validity of tobacco industry arguments that its contributions to employment tax revenues and trade balances are vital to economic health in states and nations is also considered as it is the industry's principal weapon in the battle against policy measures to reduce tobacco consumption

*The Behavioral Economics of Smoking* Warren K. Bickel, Gregory J. Madden, 1998 Evidence that economic principles may be employed to predict the rates at which cigarettes are consumed is presented from several laboratory experiments In these experiments cigarette deprived smokers were required to make a effortful response to earn cigarette puffs Changing the number of responses required per puff is conceptualized as a price manipulation Our experiments show that these price increases decrease cigarette consumption and that price elasticity of demand increases

with increases in price When from 74 different smokers participating in 17 different experiments in our laboratory were analyzed five demographic variables were related to rates of earning and smoking cigarettes in the lab 1 males smoked more than females 2 less educated individuals tended to smoke more than better educated smokers 3 higher rates of smoking were observed in individuals with high Fagerstr m smoke more than heavy drinkers and 5 unemployed subjects smoked more than employed individuals Demographic effects on price elasticity did not accord as well with econometric data Finally we discuss the ability of behavioral economic laboratory experiments to model cigarette smoking in the natural economy and the validity of using these laboratory results as a means of assessing the likely effects of public policy initiatives The results from one such experiment are presented that suggest the economic concept of inferior goods may be informative in understanding nicotine replacement products and the likely effects of differential pricing of cigarettes and these replacement products

**Economics Of Tobacco Control In China: From Policy Research To Practice** Teh-wei Hu, 2016-06-10 Nearly 370 million people in China smoke about one third of all smokers in the world are in China and about 1.2 million deaths in China are attributable to smoking The death toll is expected to reach 2.2 million in 2030 if no smoking intervention programs are implemented Taxation on tobacco products is one of the most effective tobacco control programs This book addresses not only why China should raise cigarette tax but also how to raise the tobacco tax by providing decision makers with relevant research findings and quantitative estimate about the impact of raising the tobacco tax It documents how these research findings were communicated to the Chinese government officials and how finally tobacco tax was raised 10 years after China's ratification of the WHO Frame Work Convention on Tobacco Control Treaty The purposes of this book are 1 to inform economists public health professionals and policymakers about the economic consequences of smoking 2 to provide the essential economics particularly related to taxation and public health information upon which to build the specifics of the taxation policy that is adopted 3 to identify barriers challenges and recommendations for the Chinese government and 4 to describe how research findings can be disseminated and communicated successfully to Chinese government policy makers It is a must read for researchers who are interested in China's tobacco control efforts and in how to communicating their findings to the policy makers It could also be useful for tobacco control professionals researchers and policy makers in other countries

**The Economic Analysis of Substance Use and Abuse** Frank J. Chaloupka, Michael Grossman, Warren K. Bickel, Henry Saffer, 2009-02-15 Conventional wisdom once held that the demand for addictive substances like cigarettes alcohol and drugs was unlike that for any other economic good and therefore unresponsive to traditional market forces Recently however researchers from two disparate fields economics and behavioral psychology have found that increases in the overall price of an addictive substance can significantly reduce both the number of users and the amounts those users consume Changes in the full price of addictive substances including monetary value time outlay effort to obtain and potential penalties for illegal use yield marked variations in behavioral outcomes and demand The Economic Analysis of Substance Use

and Abuse brings these distinctive fields of study together and presents for the first time an integrated assessment of their data and results Unique and innovative this multidisciplinary volume will serve as an important resource in the current debates concerning alcohol and drug use and abuse and the impacts of legalizing illicit drugs      **Handbook of Health**

wide range of unsafe activities including teen drinking and driving smoking drug use unprotected sex and criminal activity Economic principles are further applied to mental health and performance issues such as teenage depression suicide nutritional disorders and high school dropout rates Together the essays yield notable findings price and regulatory incentives are critical determinants of high risk behavior suggesting that youths do apply some sort of cost benefit calculation when making decisions the macroeconomic environment in which those decisions are made matters greatly and youths who pursue high risk behaviors are significantly more likely to engage in similar behaviors as adults This important volume provides both a key data source for public policy makers and a clear affirmation of the usefulness of economic analysis to our understanding of risky behavior

Soguel, 2012-12-06 CLAUDEJEANRENAUD NILS SOGUEL Smoking is a very common habit all over the world The prevalence rate ranges from 20% 40% in industrialised countries and is dramatically increasing in the developing world Smoking is risky and there is ample scientific evidence to support this statement We know that smoking is a major cause of disease and premature death in view of the fact that 3 million people die each year worldwide as a result of their smoking habit Twenty years ago the U S Surgeon General identified smoking as the single most important cause of morbidity and premature death USDHEW 1979 Tobacco consumption reduces life expectancy vastly Epidemiological research shows that people who have died from a smoking related disease would on average have lived for an additional 15 years had they not been smokers Warner 1987 The economic analysis of tobacco consumption is a complex and challenging issue which entails addressing many different questions What is the economic burden of smoking and do smokers pay their way How do individuals perceive their own health risks What is the effect of the addicting properties of nicotine on the behaviour of a rational utility maximizing individual Lastly what is the most effective way to discourage tobacco consumption In this context the assessment of the social burden of smoking using a cost of illness framework has played a central role since the beginning of the seventies
