Labour Economics for Development** Sandrine Cazes,Sher Verick,2013 In developing countries labour markets play a  
central role in determining economic and social progress since employment status is one of the key determinants of exiting  
poverty and promoting inclusion Yet the reality in most developing countries is that the labour market fails to create the jobs  
in the formal economy that would help individuals and their families prosper In recognition of these challenges governments  
and other stakeholders in developing countries have increasingly prioritised policies and programmes to promote decent  
work However this requires navigating a range of complex issues and debates surrounding the linkages between  
development processes and labour market outcomes This volume consists of three main thematic parts Part I provides a  
broad overview of key issues including characterising the employment challenge in developing countries and the link  
between economic growth distribution poverty and employment Drawing on the literature and country examples Part II  
analyses the specific topics of wages migration and education The final section shifts to a more normative focus addressing  
labour market institutions and policies along with systematic approaches to quantifying labour markets in developing  
countries *Perspectives on Labour Economics for Development* is an invaluable reference for policy makers in middle and low  
income countries as well as an ideal handbook for teachers and students of economics and development
