

Exhaustible Resources As Inputs In Production

- ◆ Because the demand curves for exhaustible resources are downward sloping the gradual rise in price will cause a gradual reduction in the quantity of the resource demanded.
- ◆ Rising prices also stimulate the production of substitutes for the exhaustible resource.

Economies With Exhaustible Resources:

Economic Theories of Exhaustible Resources T. J. C. Robinson, 2017-10-18 Originally published in 1989 Professor Robinson begins by examining natural resource classification and the nature of return in mining giving particular emphasis to different sources of long run price changes in mining and their relevance for user cost and the economic treatment for exhaustible resources He then traces the development of the economic theory of exhaustible resources from the last quarter of the eighteenth century to the first quarter of the twentieth documenting the differing views of various authors about the future availability of mineral resources and the extent of user cost involved in their exploitation He identifies a link between the perceived availability of exhaustible resources and the nature of the economic theory used to explain their exploitation This book should be of interest to students and researchers of Economic Theory and Policy *Essays in the Economics of Exhaustible Resources* N.V. Long, M.C. Kemp, 2014-06-28 *Essays in the Economics of Exhaustible Resources* *Economic Theory and Exhaustible Resources* P. S. Dasgupta, G. M. Heal, 1979 A book on the economics of exhaustible resources requires no justification A long book does The purist will find disquieting our two asset constant population model with which we analyse growth possibilities in an economy with exhaustible resources **Optimal Economic Growth with Exhaustible Resources** Prem C. Garg, 2017-10-17 Originally published in 1979 For decades conservationists have argued that increasing population will eventually out strip the limited natural resources of the earth Economists have responded by saying that any resource scarcity will be forestalled by changes in tastes and technology induced by the appropriate price signals This study is an attempt to develop a theoretical framework for analysing some of the issues related to this debate Using an optimal growth theory framework the author analyses the problem of optimally allocating a finite stock of the resource over time In the process the author points out the crucial parameters and value judgments relevant to the various issues This title will be of interest to students of environmental economics **Economies with exhaustible resources** Hung-po Chao, 1982 *Optimal Economic Growth with Exhaustible Resources* Prem C. Garg, 2017-10-17 Originally published in 1979 For decades conservationists have argued that increasing population will eventually out strip the limited natural resources of the earth Economists have responded by saying that any resource scarcity will be forestalled by changes in tastes and technology induced by the appropriate price signals This study is an attempt to develop a theoretical framework for analysing some of the issues related to this debate Using an optimal growth theory framework the author analyses the problem of optimally allocating a finite stock of the resource over time In the process the author points out the crucial parameters and value judgments relevant to the various issues This title will be of interest to students of environmental economics *Economic Theory and International Trade in Natural Exhaustible Resources* Cees Withagen, 2012-12-06 This study is concerned with the economic theory of exhaustible resources My interest in exhaustible resources dates back several years when prof dr J Cramer and prof dr C von Weizsacker stimulated me to direct my research at the Faculty of Actuarial

Science and Econometrics of the University of Amsterdam to the exploitation of Dutch natural gas This issue raised many theoretical problems in which I got gradually more and more involved I was lucky to find in prof dr H Weddepohl a person prepared to listen patiently and to read and criticize my numerous attempts to solve these problems The actual work on the present monograph started in 1982 at the Faculty of Philosophy and Social Sciences of the Eindhoven University of Technology in the context of the program Equilibrium and Dis equilibrium of the voorwaardelijke financiering university financing system I wish to thank here my supervisors prof dr P Ruys and prof dr H Weddepohl for their comments on earlier drafts of this monograph When looking back I realize that their remarks and our discussions have led to notable improvements Also the International Institute for Applied Systems Analysis Laxenburg Austria has made a valuable contribution by offering me the opportunity to spend three months in its serene academic environment in the summer of 1983 Thanks also to the energy group of I I A S A and the I I A S A foundation Netherlands

On the Economies of Exhaustible Resources Saad Ali Rabhan, 1986 **Handbook of Environmental and Resource Economics** Jeroen C. J. M. Van den Bergh, 2002-01-01 This major reference book comprises specially commissioned surveys in environmental and resource economics written by an international team of experts Authoritative yet accessible each entry provides a state of the art summary of key areas that will be invaluable to researchers practitioners and advanced students **Long Term Control of Exhaustible Resources** P. Lasserre, 2013-09-27 This title is concerned with the issue of long term depletion of non renewable natural resources *Economics, Sustainability, and Natural Resources* Shashi Kant, R. Albert Berry, 2006-03-30 The economics of sustainability is much more complex than the neoclassical Newtonian economic approach to economic efficiency Forest resources provide the ideal starting point for the economic analysis of sustainability This book provides a systematic critique of neoclassical economic approaches and their limitations with respect to sustainability Leading economists from different streams of economics discuss key economic aspects of sustainability and sustainable forest management including complexity ethical issues consumer choice theory intergenerational equity non convexities and multiple equilibria This is the book which integrates different streams of economics complexity theory behavioral economics post Keynesian consumer choice theory social choice theory and non convexities and suggests the main features of Post Newtonian economics This book is followed by a companion book *Institutions Sustainability and Natural Resources* Institutions for Sustainable Forest Management Volume 2 in the series Classic Papers in Natural Resource Economics Revisited Chennat Gopalakrishnan, 2018-02-02 Classic Papers in Natural Resource Economics Revisited is the first attempt to bring together a selection of classic papers in natural resource economics alongside reflections by highly regarded professionals about how these papers have impacted the field The seven papers included in this volume are grouped into five sections representing the five core areas in natural resource economics the intertemporal problem externalities and market failure property rights institutions and public choice the economics of exhaustible resources and the economics of renewable

resources The seven papers are written by distinguished economists five of them Nobelists The papers originally published between 1960 and 2000 addressed key issues in resource production pricing consumption planning management and policy The original insights fresh perspectives and bold vision embodied in these papers had a profound influence on the readership and they became classics in the field This is the first attempt to publish original commentaries from a diverse group of scholars to identify probe and analyse the ways in which these papers have impacted and shaped the discourse in natural resource economics Although directed primarily at an academic audience this book should also be of great appeal to researchers policy analysts and natural resource professionals in general This book was published as a series of symposia in the Journal of Natural Resources Policy Research

Advanced Lectures in Quantitative Economics Frederick van Der Ploeg, 2014-05-01 Advanced Lectures in Quantitative Economics summarizes some of the efforts of a second phase program for first rate candidates with a Master's degree in economics who wish to continue with a doctoral degree in quantitative economics This book is organized into three main topics macroeconomics microeconomics and econometrics This text specifically discusses the Neo Keynesian macroeconomics in an open economy international coordination of monetary policies under alternative exchange rate regimes and prospects for global trade imbalances The post war developments in labor economics introduction to overlapping generation models and measurement of expectations and direct tests of the REH are also elaborated This monograph likewise covers the dynamic econometric modeling of decisions under uncertainty and fundamental bordered matrix of linear estimation This publication is a good reference for students and specialists interested in quantitative economics
