The Exploitation of Mammal Populations V.J. Taylor, N. Dunstone, 2012-12-06 Human exploitation of other mammals has passed through three historical phases distinct in their ecological significance though overlapping in time Initially Homo sapiens was a predator particularly of herbivores but also of fur bearing predators From about 11 000 years ago goats and sheep were domesticated in the Middle East rapidly replacing gazelles and other game as the principal source of meat The principal crops including wheat and barley were taken into agriculture at about the same time and the resulting Neolithic farming culture spread slowly from there over the subsequent 10 500 years In a few places such as Mexico Peru and China this Middle Eastern culture met and merged with agricultural traditions that had made a similar but independent transition These agricultural traditions provided the essential support for the industrial revolution and for a third phase of industrial exploitation of mammals In this chapter these themes are drawn out and their ecological significance is investigated Some of the impacts of humans on other mammals require consideration on a world wide basis but the chapter concentrates parochially on Great Britain What have been the ecological consequences of our exploitation of other mammals

2.2.1 Predatory man Our nearest relatives chimpanzees orang utans and gorillas are essentially forest species deriving most of their diet from the fruits of forest trees and the shoots and leaves of plants

Tourism is a central part of regional development strategies in many localities around Europe not just in traditional coastal or mountain resorts but also in areas without a strong track record with regard to visitor economy In a globalising world destinations can no longer take their traditional visitors for granted and escape growing competitive pressures because increasingly experienced specialised and demanding travellers now have a vastly greater number of potential destinations to choose from Both well established and emerging tourist destinations are therefore under pressure to be innovative to increase their attractiveness in the globalising visitor economy This book focuses on the role played by tourist destinations conceived as multi layered and functional governance structures in stimulating or complicating the development of new tourist experiences The complex relationship between firm level and territorial development dynamics is of course by no means confined to tourism development and the book will therefore be of a more general relevance for research into innovation and spatial development dynamics This book was published as a special issue of European Planning Studies
