Fisher, 2016-09-14 Excerpt from The Hawks and Owls of the United States in Their Relation to Agriculture It is important to observe that all the rapacious birds are slow breed ers and contrary to popular belief there is no good evidence that any of them have two broods a year though of course if the first set of eggs is lost another one will be deposited There is every reason why they should not raise more than one brood for notwithstanding the fact that they breed very early in the year the young grow slowly and remain a long time in the nest Hence the tax upon the parent birds to secure enough food to satisfy the enormous appetites of their slow growing progeny is very great probably twice that made upon the members of any other order of land birds About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections
