*Ecological Systems of the Geobiosphere* Heinrich Walter, Siegmund W. Breckle, 2013-06-29 **Ecological Systems of the Geobiosphere** Heinrich Walter, Siegmund-W. Breckle, 1989-08-17 By the end of the last century the only region in all of Europe where the natural vegetation remained untouched over large expanses was Eastern Europe Information on the vegetation of this region however remained mostly unavailable to western scientists although the ecological approach to botanical research originated in Eastern Europe Heinrich Walter was born in Russia studied Natural Sciences with emphasis on botany in Odessa and is familiar with all relevant Russian literature on ecology This volume thus offers scientists worldwide a unique and comprehensive survey of all relevant research including the mostly unknown literature published in Russian Ecological Systems of the Geobiosphere Heinrich Walter, Siegmund-W. Breckle, 1986-11-01 In Volume 1 of this four volume series ecological problems of a general nature were discussed from a global point of view Familiarity with this is essential for a full understanding of the more specialized treatment in this and subsequent volumes for no similar approach is to be found in other ecological handbooks for beginners This present volume deals in detail with the special ecological relationships of the tropical and subtropical zoniobiomes I to III Most ecologists proceed from the basis of their experience in the temperate zones of the northern hemisphere As a result many ecological writings show a certain one sidedness and there is a danger that generalizations made will not be broadly applicable To avoid this particular emphasis is laid in this volume on the special ecological features and the characteristics of the tropical and subtropical regions More specifically we deal not only with the relationship of the euclimatope to zonal soils and zonal vegetation but also pay attention to azonal conditions shown in pedobiomes and in the altitudinal belts of mountains the orobiomes In this and the subsequent volumes the same simple scheme is followed in treating each zoniobiome 1 climate 2 soils 3 producers 4 consumers 5 decomposers 6 ecosystems 7 subdivision into biomes 8 orobiomes 9 pedobiomes and 10 zonoecotones Where it has appeared expedient however we have occasionally deviated from this scheme see Deserts D F G and H **Vegetation of the Earth and Ecological Systems of the Geo-biosphere** Heinrich Walter, 2012-12-06 Phytomass and Primary Production of the Various Vegetational Zones and of the Entire Biosphere The biosphere is that thin layer at the earth's surface in which living organisms exist and biological cycling takes place It includes the upper horizons of the soil in which plants root the atmosphere near the ground insofar as organisms penetrate this space and all the surface waters More than 99% of the earth's biomass is phytomass to which we shall limit our discussion Amounts of phytomass are distinctly related to vegetational zones Because accurate determination of phytomass and primary production is difficult only gross estimates have been available until recently However in 1970 Bazilevich et al published in Russian more accurate calculations based on the rapidly accumulating literature for the various thermal zones and bioclimatic regions of the earth These authors calculated mean phytomass and mean annual primary production for the various regions as dry mass in tons per hectare On the basis

of measurements of the areas covered by the individual regions excluding rivers lakes glaciers and permanent snow total phytomass and total annual primary production for the various regions were obtained see table The sum of these figures is the phytomass and annual production of the land surface of the earth In addition the table gives corresponding data for the waters of the earth The values involved are potential i e they are based on natural vegetation uninfluenced by man

Breckle, M. Daud Rafiqpoor, 2022-11-07 Vegetation soil and climate are the most important components of ecological systems The book represents a compact synthesis of our current knowledge about the ecology of the Earth and is thus the basis for understanding the major interrelationships in a global perspective In the first part with a rich endowment of illustrations and photographic material the well introduced book deals with the essential processes and operations on the Earth s surface that lead to the formation of the vegetation cover with its distinctive zonation In the second part the individual vegetation zones as large scale ecosystems i e zonobiomes of the biosphere are consistently described comparatively according to certain criteria In a short and compact form the main characteristics and structures as well as examples of ecosystem processes are discussed The large scale ecosystems are at the same time the basis and reference system for all anthropogenic changes that have drastically altered the vegetation in the last millennia but especially in the 20th century This book is a translation of the original German 1st edition *Vegetation und Klima* by Siegmund W Breckle and M Daud Rafiqpoor published by Springer Verlag GmbH Germany part of Springer Nature in 2019 The translation was done with the help of artificial intelligence machine translation by the service DeepL com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors *Coviability of Social and Ecological Systems: Reconnecting Mankind to the Biosphere in an Era of Global Change* Olivier Barrière, Mohamed Behnassi, Gilbert David, Vincent Douzal, Mireille Fargette, Thérèse Libourel, Maud Loireau, Laurence

Pascal, Catherine Prost, Voyner Ravena-Cañete, Frédérique Seyler, Serge Morand, 2019-03-12 This book considers the principle of sustainable development which is currently facing a growing environmental crisis A new mode of thinking and positioning the ecological imperative is the major input of this volume The prism of co viability is not the economics of political agencies that carry the ideology of the dominant conventional economic schools but rather an opening of innovation perspectives through science This volume through its four parts more than 40 chapters and a hundred authors gives birth to a paradigm which crystallizes within a concept that will support in overcoming the ecological emergency deadlock **Ecological systems of the geobiosphere** Heinrich Walter, Siegmar-Walter Breckle, 1985 *Tropical Ecological Systems* F.B. Golley, E. Medina, 2012-12-06 In 1971 the International Society of Tropical Ecology and the International Association for Ecology held a meeting on Tropical Ecology with an emphasis on organic production in New Delhi India At this meeting a Working Group on Tropical Ecology was organized consisting of K C Misra India F Malaisse Zaire E Medina Venezuela and F Golley U S A The object of this Working Group was to stimulate interaction between tropical ecologists through future scientific meetings and other exchanges and communications A second meeting of ISTE and INTECOL was held in Caracas Venezuela in 1973 under the direction of Medina and Golley and sponsored by the Department of Ecology Institute Venezolano Investigaciones Cientificas IVIC The basic structure of the meeting was provided by series of invited papers which considered topics of special interest from both an applied and theoretical view These included physiological ecology Pannier populations Rabinovich tropical savannas Lamotte rivers Sioli estuaries Rodriguez and island ecosystems Mueller Dombois Contributed papers considered details of these and other ecological topics including the application of ecology to human problems The present volume includes the invited papers listed above and a sampling of contributed papers which together illustrate the trends of research in tropical ecology The papers show that tropical ecology is a vigorous subject of research While the papers in this volume do not provide reviews of all the topics of study in tropical ecology they do present authoritative statements on progress in the major subject in the field
