Economists offer rigorous quantitative analyses of how the institutional design and purpose of the WTO and its progenitor  
the GATT affect economic development The World Trade Organization WTO was established partly to support economic  
development in developing countries through international trade This goal has been elusive with some questioning the WTO's  
ability to achieve such a goal In this volume leading scholars in the economics of international trade offer rigorous  
quantitative analyses of how the institutional design and purpose of the WTO and its progenitor the GATT affect economic  
development The volume begins with analyses of market access concessions that have been or could be exchanged between  
developing and developed countries from a formal framework for incorporating non tariff measures into a model for  
analyzing a multilateral trade agreement to an examination of the MFN most favored nation free rider problem Contributors  
then develop new theoretical and econometric approaches for understanding key aspects of trade liberalization under the  
GATT WTO that are of particular relevance to economic development considering such topics as achieving cooperation in  
eliminating prohibitive trade barriers and the effect of China's export subsidies on its dramatic growth in exports Finally the  
book considers two significant new issues that arose from the Uruguay round from which the WTO was formed the TRIPS  
agreement regulating intellectual property and the resolution of trade disputes with and without litigation Taken together  
these analyses shed new light on the relationship between trade liberalization and economic development as well as the WTO's
