A Guide for Assessing Community Emergency Response Needs and Capabilities for Hazardous Materials Releases Battelle Memorial Institute, 2011. This Guide presents comprehensive step-by-step guidance on assessing hazardous materials emergency response needs at state, regional, and local levels, matching state, regional, and local capabilities with potential emergencies involving different types of hazardous materials and assessing how quickly resources can be brought to bear in an emergency. The methodology described in the Guide is designed to be scalable, allowing the implementation results to be aggregated at the local level up through regional, state, and national levels. Also, the Guide is designed to connect as many components as possible to already established standards, guidelines, regulations, and laws so that the Guide will remain current as these underlying components are updated. In addition, the Guide discusses appropriate means for maintaining currency of the information over time. The Guide and accompanying spreadsheet tool on the attached CD-ROM, which leads planners through the assessment process, will be most useful for local jurisdictions that have limited resources and expertise in hazardous materials emergency response planning. Publisher's description

Standardized Maps for Hazardous Materials Accidents, 1979. Problems reported by emergency response personnel in developing pre-emergency plans and making tactical decisions during hazardous materials transportation emergencies prompted the Safety Board to conduct this special investigation. The investigation disclosed a need to improve methods for predicting the expected

behavior of hazardous materials in emergencies for both preplanning and tactical uses Existing information sources were found to be inadequate for these purposes A method to improve the recording of hazardous materials behavior in accident investigations that will improve preplanning and tactical decisionmaking for hazardous materials emergencies was identified and has been adopted as a tentative accident reporting standard by the Safety Board for accidents involving hazardous materials Immediate and potential uses for the standardized hazardous materials behavior maps are identified and implementation problems are discussed *Hazardous Materials Awareness and Operations* Rob Schnepf,2014
