Headaches And Migraine In Childhood Clinics In Developmental Medicine No 91:

Headaches and Migraines in Childhood Charles F. Barlow, 1984 Population surveys tell us that the headache is the most common indisposition of humankind While most adults are able to take the problem in stride recurring headache or migraine in childhood can carry more serious implications Despite this there has been no major study of the subject for over twenty years Professor Barlow's book admirably fills this gap The book starts with a section on classification and epidemiology then deals with genetics pathogenesis and precipitation factors of attacks There is a thorough chapter on the expression of childhood migraine and the periodic syndrome is fully defined and discussed Another major section deals with complex and complicated syndromes and other serious problems such as seizure stroke and syncope There is a useful chapter on the treatment of juvenile migraine and the final two chapters deal with the causes evaluation and investigation of symptomatic headache Dr Barlow illustrates his text with over fifty detailed case histories of his own patients spanning over twenty years of practice *Developmental Medicine and Child Neurology*, 1985 Headache Richard Peatfield, 2012-12-06 The rapid pace of advance in the basic and clinical sciences has led to striking changes in the practice of medicine This is particularly evident in clinical neurology Twenty years ago neurology was justly criticised for its preoccupation with diagnosis and classification and for the relative paucity of treatments then available All this has now changed and neurology has become a treatment oriented specialty This change has been brought about partly as a result of the introduction of new and accurate methods of diagnosis especially immunological electrophysiological and imaging techniques and partly as a result of new forms of treatment Examples of these new treatments include the control of cerebral edema new antibiotics for infections of the nervous system drug level measurements for the evaluation of the adequacy of treatment of epilepsy and advances in neurosurgical technique In addition many patients presenting with neurological disorders are found to be suffering not from primary diseases of the nervous system but rather from neurological complications of systemic disease Vascular disease cancer and infections are common examples The degenerative disorders have recently become a focus of attention as their importance in the aging societies of the developed Western countries has been realised and this raises the hope of improved management and treatment of these disorders **Cerebral Visual Disturbance in Infantile Encephalopathy** O. Nieuwenhuizen, 2013-11-21 The diagnosis and treatment of children suffering from infantile encephalopathy is part of daily child neurological practice Over the past years a considerable amount of knowledge has been accumulated on motor and mental handicaps orthopaedic corrections rehabilitation measurements etc Less attention has however been paid to the perceptual deficits in children suffering from infantile encephalopathy e.g. visual and hearing loss It is likely that such deficits may have a negative effect on development As these children are often also mentally retarded perceptual deficits may be difficult to diagnose Expanding the available knowledge on these deficits may facilitate their early diagnosis Assessment of diagnosis enables adaption of developmental stimulation which may ultimately contribute to a higher
