Public Health and Primary Care Alison Hill, Siân Griffiths, Stephen Gillam, 2007-07-05 This book is written for people working in primary

care who want to understand more about how they contribute to improving the health and health care of the populations that they serve and for people working in public health who want to understand the essential contribution of primary care to improving health. It sets out the nature, purpose and relevance of public health approaches to primary care practitioners and primary care organisations. Primary care teams have had a long established role in public health providing preventive services to populations through the registered population in general practice. This model of a registered practice population has withstood multiple reconfigurations and reorganisations within the NHS and is the envy of many countries trying to create a public health system with primary care at its heart. There are clear differences in approach with the inevitable conflicts between the rights of the individual set against the responsibility to ensure services are delivered fairly and equitably to whole populations. This book explores this dilemma showing how people working in primary care can cross the divide to become part of the public health system and in doing so are well placed to make a difference to the health of their populations. Solving Population Health Problems through Collaboration Ron Bialek, Leslie M. Beitsch, John W. Moran, 2017-03-27

Rapid changes in healthcare and public health offer tremendous opportunities to focus on process improvement. Public health departments and agencies increasingly work collaboratively with hospitals and other community partners to promote knowledge and improve collective impact through public and private sector coalitions. Solving Population Health Problems through Collaboration brings together population health experts and leaders to examine evidence based intervention strategies, case studies in health departments and hospitals, health equity issues, core competencies, public health campaigns, step by step collaboration advice and much more. Each chapter is written by a population health leader shaped by his or her experience implementing change in a community's health to demonstrate innovative methods and tools for building and leading sustainable community coalitions to effect real change. Designed to prepare population health workers in public health and healthcare settings to develop strategies for improved population health, this book is required reading for public health managers and health administrators as well as students enrolled in population health courses. **Metrics That**

Matter for Population Health Action National Academies of Sciences, Engineering, and Medicine, Institute of Medicine, Board on Population Health and Public Health Practice, Roundtable on Population Health Improvement, 2017-01-28. In times of rapid change and constrained resources, measures that are important, focused and reliable are vital. However, there is an overabundance of measures available for evaluating various aspects of population health and previous efforts to simplify existing sets to meet the needs of all decision makers have been unsuccessful. The National Academies of Sciences, Engineering and Medicine convened a workshop to explore the status and uses of measures and measurement in the work of improving population health. Participants explored existing and emerging population health metric sets and characteristics of metrics necessary for stakeholder action across multiple sectors. This report summarizes the presentations and discussions from the workshop. *Public Health 101: Improving Community Health* Richard Riegelman, Brenda Kirkwood, 2018-03-07
